

“To inscribe in a step of progress, a progress in compairon with ourselves to make better each year and to divide with others the good practices or initiatives, it’s the object of our adhesion to the global compact.

Everyday, the will of the direction is supported by our teams who, by their creativity, reconsider our manner of making : consume less ink with new technologies of stochastic screeming in impression, decrease our packing with automatic fill of ink on our machines using barrel of 100 kg instead of 1 or 2 kg, precede measurements aiming at removing alcohol in the solutions of damping for the impression (applicable in January 2006). More than an idea, this adhesion is an engagement for our development over the duration”.

Laurent et Renaud Caillat  
PDG and DG

### **The global compact**

Launched in July 2000 on the initiative of Kofi Annan, Secretary General of ONU, the global compact are intended to gather the companies, the organization of United Nations, the world of work and the civil company around ten universal principles relating to the human rights, with the fight against the corruption, the standards of work and the respect of environment. The global compact is a voluntary initiative of responsible companies to which the printing works of the “Imprimerie des Deux-Ponts” to decide to adhere. By this act, the company supports the action of Association and undertake an annual communication on progress.

## Principles of Global Compact take into account

---

The policy of “Imprimerie des Deux-Ponts” acts according to principles 7, 8 and 9 relating to the environment.

Principle 7: To support a preventive approach for the environmental challenges.  
Principle 8: To take an initiative to promote even more the environmental responsibility.

Principle 9: To encourage the development and the diffusion of environmental technologies.

## The actions realised

---

To protect the environment (principles 7, 8 and 9 of the global compact) is essential today for a company. Since 2004, the “Imprimerie des Deux-Ponts” is a certified company ISO 14001. Indeed, it set up a system of environmental management.

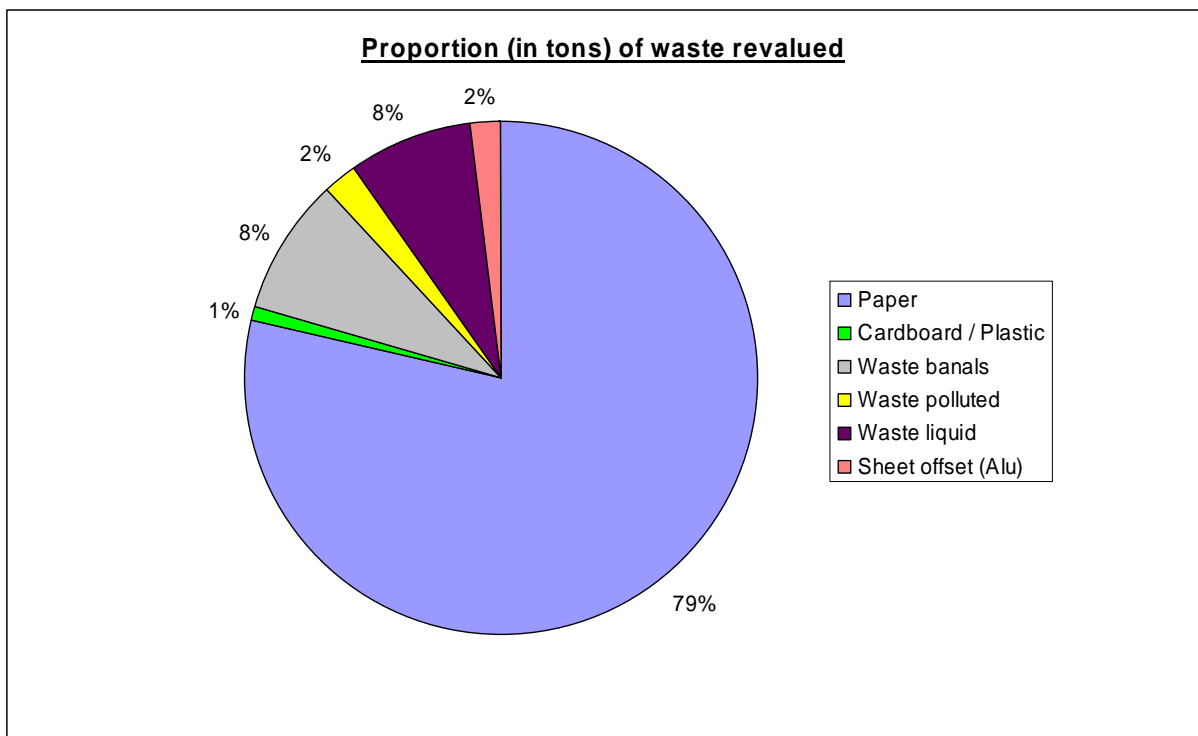

The engagement with certification ISO 14001 is not obligatory. It's a voluntary step which has for principal objective to reduce the environmental impact related to the activities of establishment.

This certification rewards an effort general for all the employees who, in the same desire to protect the environment and to work under optimal conditions, have modified their practices. This adaptation will of the behaviors to new requirements of work is the result of a long tradition of quality in the company. By constituting a system of environmental management, the direction undertake

“to manage the prevention of the pollution which applies to the structure and the trade of the “Imprimerie des Deux-Ponts” and to put a system centered on the improvement continues”.

In this respect, here some of the actions realised:

- To develop the respect of environment in all its actions daily by a sensitizing and a communication adapted.
- To promote the durable development throughout the production (of the selection of the raw materials until the recycling of the finished product).

- Sorting of solid waste and liquids.
- Not to reject industrial water in the cleansing network without control.
- To make use of means to limit the consumption of raw material and material energy of packing.
- To imply the suppliers and the subcontractors in the process of respect environment: the “Imprimerie des Deux-Ponts” uses more of paper 80% resulting from forests managed durably (PEFC, FSC).

Environmental protection represents a permanent challenge, the company undertake to accept it during years to come in:

- Permanently Seeking substitute products with those used today and which have an environmental impact,
- Decreasing to the maximum its solvent consumption,
- Making safe the management of these liquid storages and to decrease dangerous solid waste,
- Limiting its total sound production interns and external.

Our efforts to improve the environment was also concretized by the certification “Imprim’Vert” in 2004. Where we commit ourselves respecting simple criteria like:

- A good management of dangerous waste,
- An installation of retentions under the dangerous liquids in order to avoid any accidental pollution,
- An exclusion of the toxic products labelled (death's-head) in the workshops offset.

The environmental protection represents a permanent challenge that the Printing works of the Double-deckers undertake to continue to accept during years to come, by continual adjustments and a will without fault.
