

## **BRF ENVIRONMENTAL POLICY**

### **PURPOSE**

This Environmental Policy for BRF Brasil Foods establishes guidelines for improving the company's processes, products and services with a view to the continuous improvement in environmental quality and minimizing associated environmental impacts.

### **PRINCIPLE**

As part of its commitments to sustainability, BRF adopts a management model based on a combination of guidelines, practices and actions with a view to achieving simultaneous results on the economic, social and environmental fronts. The company is of the belief that to contribute to the development of society means to guarantee the sustainability of its business.

### **ENVIRONMENTAL MANAGEMENT**

BRF adheres to the legislation and the applicable requisites as a starting point for responsible operations in the environment.

BRF is committed to providing guidance to suppliers and key partners as an integral part of its productive processes, recognizing the efforts of those that foster the conducting of their activities in a sustainable manner.

BRF understands that protecting the biodiversity, quality of life, healthy coexistence with society and respect for future generations are results of its operational management in accordance with adequate eco-efficiency criteria, prevention of pollution and commitment to the responsible use of natural resources.

### **ENVIRONMENTAL RISKS**

Through the Life Cycle Analysis of products and jointly with its suppliers, BRF seeks to upgrade processes through the continuous improvement in the use of natural resources, inputs and management of waste products and effluent. BRF believes that the acquisition of products and effective energy services, in addition to prioritizing the use of renewable energy, represents a significant benefit to the environment and also to the competitiveness of its businesses.

## **CLIMATIC CHANGES**

BRF understands that the climatic change theme has a major impact on the management of the company's risks and publicly assumes the commitment of publicly acting to mitigate and compensate greenhouse gas emissions from its productive chain through participation in sector movements, preparation of inventories and definition of targets for reducing emissions through business models which contemplate technological innovation, energy performance improvement and the preponderant use of renewable energy.

## **ENVIRONMENTAL RESPONSIBILITY**

BRF in conjunction with its stakeholders will operate transparently with respect to company policy and procedures in relation to environmental aspects.

BRF understands its role in the dissemination of good practices for environmental protection through education and the commitment of its employees, out-sourced staff and those involved with the production chain.
