INTRODUCTION

Overview 2014 TIMA

TIMA was established by Dr.Ing. Achim G. Deja, 1996 in Tuttlingen, Germany. The Transformation Integration and Management Applications, TIMA, shares and designs strategy and structure services and UNGC principles in international relations for individual netted enterprises in globalization. Strategies for industry 4.0 abilities and the use of internet of things within a personalized cyber demand beyond the old economy:

Since 2003 TIMA accompanies enterprises of all sizes and sectors in the UNGC to cooperate, learn, share and contribute on issues of corporate sustainability in societies and markets within UNGC principles. In 2004 we initiated the first international high tech project on women's health in India with UNU, UNGC and German governmental authorities for value creating networks in life science for private and public hospitals and clinics.

In 2006 TIMA participated in the UNGC private business sector in N.Y., to realize the 10 UNGC principles in all our entrepreneurial services within our sphere of influence. During the Shanghai UNGC Summit and the Shanghai declaration 2006, TIMA shared and learned about process responsibility for all in CO2 climate risks. Since then our success factors to rethink or to reengineer strategies and structures reduced these risks by comprehensive innovative sharing in new global repositioning of clients. TIMA is anticipating paradigm changes by digital connectivity and IOT content playing field levels and new technology standards for enterprises and wealth development in all business fields, integrating cyber based communications. In meetings and events of the UNGC and the UN sustainable corporate forum, TIMA shared and exchanged in the UNGC issues for of a global architecture in a post climate change era in sustainability at any place.

Over the time, TIMA mediated numerous international family enterprises, entrepreneurs and management leaders, small and multinational companies to participate the UNGC. We developed masterplans to transform and integrate employees, entrepreneurs, and stakeholders within their reengineered strategies, fitting the UNGC Principles and projects related to the UN corporate sustainability Forum. Within TIMA GlobalCon, TIMA SustainMan and TIMA InNetMediation we

offered guiding to improve sharing and exchange abilities for market flexibility. We expanded this perception 2014 to real value creation in TIMA Work and Wealth, unlimited innovations growth in TIMA CytoGrowth and serving personalized desires in TIMA SME Statesmanship of digital business partnerships within UN sustainability rules. Our goal was and is to strengthen the individual abilities in enterprises to transmute the desires of humans into plurality and diversity of individual products, services or trade.

To serve the sovereign sovereigns in free cyber societies and markets – the humans – enterprises and governments deliver with their specific contributions in personalized relations for a better living at any place in the pyramid and at any place of the pyramid. Digital value networks of business partnerships follow local human desires creating a new market flexibility for the supply side of work, to match the human demand side. In such sophisticated TIMA value networks the innovative capital shift of wealth enjoys very low key risks in new playing field standards for cyber globalization compared to investments in traditional business responsibility.

All these TIMA strategies and structures continuously increase the exchange of skill, knowledge transfer and of better employment education, to raise the performance of all humans as part of the demand side and supply side within the sustainability levels of UNGC based global value networks. Our digital opportunities are benefitting game changing netted processes in and between companies, cities and societies. TIMA matches german experiences in traditional social market rules with the goals of the primacy of politics locally in the new digitalized world with netted business partnerships and game changing technologies.

2009 we promoted first time with TIMA in the UNGC cross cultural integrity in principles of subsidiary and individual spirituality for social market economies in international societies and participated in the launch of “Manifesto of global Economic Ethic” during the UNGC summit in N.Y. the same year.

2010 TIMA shared and contributed in low carbon strategies within ASEAN Affaires in speeches and meetings. Asian industrial free trade zones shared and exchanged with TIMA Wealth partnerships on low carbon issues and clean energy – mix infrastructures within the Caring for climate initiatives of UNGC.

In 2011 TIMA designed first time for a civil society, the DtMG e.V. the initiative for cross cultural integrity between German and Malaysian entities and sponsored the participation of this CS in the UNGC, committed to human driven entrepreneurial partnership solutions in TIMA projects in fields of bio-economy, life science and health care.

With measurable integrity rules and sustainability principles, we explored and mediated MOU's for international certification bodies to human safety in HALAL and in global contract farming on foodstuffs, in natural medicine and beauty cosmetics with new forms of subsidiarity in innovations driven value chains within our actions for UNGC.

Since 2012 TIMA chief strategist Achim Deja explored and shared in the UNGC summits new TIMA visions on transforming traditional circular economy solutions, impacting the input and output in materials, energy and robotics-intensive fields into digitized value creations. Within the heavy industry of steel-, aluminium- and heavy chemical or extractive industries, decentralization, autonomous automatization, digitalized in plant engineering and construction services, robotics for human assistance TIMA shared new forms of value creating partnerships between technology, powder materials science and capital interests. In processes of game changing by a human demand lead, markets to turn around the circular economy, to perform and create digitalized prosperity with cyber based 3D communication and authenticated decentralized manufacturing in local entrepreneurial partnerships.

In all economic sectors the sustainability factor causes new high-tech processes, technologies and virtual digitalization impacts that change factor cost intensity in investments, of materials and in technology assets by TIMA Work and Wealth concepts. In new business partnerships for the European region and with Asia AEC and NAFTA the TIMA brand "made with Germans" was shared.

2013 we co-operated exploring on industrial and public waste systems of to-morrow for clean industrial belts, industrial harbor locations, mega cities and metropolises in SEA. In ASEAN we shared a key framework for a national public health partnerships. With unlimited opportunities for cyber based logistics of patient – doctor relations the innovations created added value networks in autonomous entrepreneurial services for governmental entities for affordable transparent clean healthcare systems for all by digitalization of UNGC rules in our clients value networks.

2014 TIMA promoted the DECHEMA e.V. and DtMG e.V. in the first neutral and transparent digital CS platform between Europe and SEA. TIMA and DtMG shared and exchanged on co-operations between SME's in partnerships on local level. Between German VBU association in DECHEMA e.V., and with BioTech Corp. Malaysia, TIMA bridged the sustainability principles of UNGC and shared the German social market vision of autonomous entrepreneurial access in societies and markets with local partners in Malaysia and Germany, only guided by the Governments in terms of regulations.

2014 Dr Martina Timmermann, VP TIMA international affairs, published in the 59 Report of AICGS/John Hopkins University Washington DC the first resilience vision for digitalized city partnerships with enterprises, digital driven for additional safety and security impacts in and between local societies and local markets within their primacy of politics and reliable regulative policies.

This enables solutions between humans in digital netted societies to underline political process stabilizing, and changes disruptive fears into to manageable evolutions and opportunities within a trusted change management and participation of politics and industry on the pathway to digitalized societies and cyber markets of tomorrow. With comprehensive digitalized transparency in nanosecond for safety and security within any individual shared value networks of business partnerships hostile attacks or criminal cyber marketing of decay and destructive collective think pattern can be exposed.

2014, TIMA intensified with clients and UNGC the exchange in identification processes on opportunities for TIMA work- and wealth innovations through partnerships and the TIMA CytoGrowth growth strategies in societies and markets. These actions included tools from social media, serious gaming, cyber integrity and local legality and decentralized automation assistance in the clients profile as force for the better.. The continuous TIMA support 2014 focussed on sharing the best practice to establish UNGC Sustainability in all cyber based architectures ahead, as the key playing field level of unlimited growth in markets.

TIMA GmbH is a conservative signatory to the Principles United Nations Global Compact and signatory of several initiatives as C4C, Water Mandate, B4E, Signatory since 2013 also in B4P, Business for Peace, a platform for encouraging and promoting good corporate partnership building with cross cultural business integrity

sharing responsibility for human rights, labor, environment and anti-corruption for social market driven economies. As Signatory of Women Empowering we promote since 2014 internal and external actions for women's empowerment principles WEP's to participate women and men, as serious game changer together, for more than to achieve gender equality.

Most of these elements of the UNGC pathway to sustainability we guide in our TIMA SME Statesmanship for building digitalized individual business partnerships locally for any human desire at any place worldwide.

After having joined the UNGC in 2006, this seventh TIMA Communication on Progress (CoP) is disclosing our global sustainability activities for further sharing in digitalized networks beyond 2014. Human driven societies and markets turn the digitalization into a watershed to liberty with an western idea of man.

We have thus far communicated our efforts and achievements in different areas of our website, and would hereby like to call your attention to these areas according to the structure suggested by the Communication on Progress (CoP) Guidelines.

Dr. Achim Georg Deja

President - CEO of TIMA GmbH International

Frameworks for mutual understanding of sharing on issues within the COP7 of TIMA International:

UN Definition of Sustainability 1987 Gro Harlem Brundtland Commission

The concept of sustainability comes from forestry in approx. 1700 by Hans Carl von Carlowitz in Freiberg Saxony, to reforest the amount of trees used in mining.

1987 the World Commission on Environment and Development took up the concept and defined sustainable development for all in societies and markets:

“Sustainability meet the needs of the present without compromising the ability of future generations to meet their needs. This means that a corporate policy is followed

that not only respects economic requirements but also ecological limits and at the same time strives towards social equilibrium”

S.G. UN Corporate Sustainability Forum – UNGC

UN Global Compact (2000) shared sustainability pathway of private sector to prosperity and better living for all with a human face to global market (Kofi Anan 1999-2006) and with new business statesmanship for sustainability and digitalization (Ban Ki-Moon 2007- 2014 ff.)

TIMA – as UNGC participant is committed to share in cyber- sustainability

The TIMA owners, management and employment, being part of digital game changing strategies and structures, are committed to the 10 UNGC principles and individually obliged to the next generation to create outperforming value networks for sustainability. We share with augmented work and wealth TIMA SME partnership strategies for societies and markets, with the human face of free social cyber markets economics in SME statesmanship for better living within the primacy of politics and individual spirituality.

UNGC TIMA COP 7 - 2014

TIMA International has continued to drive 2014 the cross cultural understanding to participate in building a global architecture for societies and markets matching sustainability within the 10 UNGC Principles in the upcoming digitized globalization. Within the post climate change world of sustainability and digitalization, the TIMA strategies and structures are part of Northern Europe idea of social market 4.0 economics within the internet of things.

2014 TIMA has been sharing game changing pathways for enhanced innovations in technologies and processes with individual responsibility in work and personalized wealth development for all in new TIMA SME Partnership forms and fractal principles to connect and integrate all sizes of enterprises.

2014 TIMA contributions in strategies for the future minds to achieve UNGC Sustainability

TIMA contributed in strategies for a digital sustainability designing and for the digital SME partnerships value net building. Both achieve game changing cost decreases in new success factors in “cyber” driven markets of digitized and netted economies. Easy ICT “apps” fit skills and training for all people to learn, use and design their new virtual human abilities empowering a new human positioning and acceptance to learn and use new communications intensity to create and manage digitized sustainability as personalized responsible part in a global architecture of humans, markets and societies in the future.

With the individual entrepreneurial and personalized customers opportunities by connectivity via platforms, the internet of things claims the contents in communications with an access to the accumulated knowledge to all Big Data piled up. Digitized sustainability creates an essential cohesive integrity standard in all entrepreneurial value networks, bridging all customers and providers in remarkable reengineered individual and personalized trust relations compared to the trading, manufacturing and services of all history, but especially of industrialization and Taylorism.

The cyber market demand starts with requested desires of any customers that were digitally transmuted by new abilities of employees in requested enterprises in cyber rooms of internet in individual digital forms on communication and answered in a personalized entrepreneurial preposition. The customers as normal humans in all societies and markets drive the governments, enterprises, or entities to deliver by the specific profile of their value networks, connected to all in zero time to order fulfilment.

The enterprise - customer relation will follow reverse engineering by 360° changing completely the frame of all traditional work- and wealth environments, pushing for the upcoming dawn of opportunities in rethinking all past messages, ending up in new strategic marketing elements on all capital policies, politics, governmental administration, social media, news, entities and enterprises, stabilizing and designing customers increasing influence in the base of the pyramid with creative harmonization of society visions and entrepreneurial new missions for economics of work and new success factors of wealth development by this framework to unlimited growth in such a paradigm change.

The changing roots guide all TIMA masterplans 2014 - 2017 are our shared strategies and structures for key human “work” creation and key human “wealth” building, approved all over the world in parts of ICT innovations, but manifested first in Silicon Valley with the entrepreneurial tools, enabling our contributions to the sharing economy by connectivity and contents between human-machine relations at any place, with social media desire at any place, to be realised in a point of digital convergence at any place.

Managing within the value network of business partners the transforming of all their mechanical abilities with processes on digitizing, virtualizing, simulating, holograms and visualization for advanced communicating with voice over IP, to improve in global harmonized systems the diversity of security, software, networks, infrastructures, robotics and automatization is part of the structural game change to realize the mission of a value network.

The result is a highly attractive capital-, material- and commercial solution with decentralized market flexibility, local logistics, and human driven robot-assistance, efficient downstream powder and fibre layer materials and adequate printing in global quality and payment standards. The simple result is that individual partnerships in netted global datas meet and match in nanoseconds all local personalized customer's relations and their desires with zero time to market around the globe.

The entrepreneurial technical and financial start in such digitized local value network business partnerships, creates an individual integrity of sharing and reliable marketized brand of multiplication within a cyber economy framework sometimes based only on one innovative desire for a product, service or trade demand, for a global community offer. This underlines the family driven SME partnership opportunities for human driven strategies embedded in the architecture of top down and bottom up value networks, shared by TIMA 2014.

This new cyber opportunities need urgently efficient global cohesion between the local Primacy of Politics for rules and regulatory frameworks, to avoid criminal outcomes and political radicalism of cultures.

The tempting dark cyber globalization vitalizes grey or criminal minds of any societies. Often dark cyber globalization missuses governmental power by their individual historical framework or agitates in hateful collective think patterns of

national or local networks. By polarizing the Primacy of politics and their governmental aiding forces, in all central driven as well as in capital driven or religious driven societies the dark cyber impact exists within all forms of markets and societies around the world, even if it is declared officially to be untrue. This happens in informal or open top down structures, often according to national or regional interests and traditions, mostly knowing and accepting periodic crisis on cost of thirds to benefit by dark cyber activities. Using might by fear and obedience and even starting secret industrial wars, they claim for "the end justifies the means". This is only to replace by international law, WTO and with local balanced transparency, as UNGC sustainability principles in the real and cyber world.

Such barriers turned in the past the markets into a different western and eastern international work sharing strategies and caused unfair races of competitiveness after world war II order in 1945 and did not end by the globalization outbreak after 1989 by opening the markets of socialistic systems nor will we avert further damage in climate change without a convincing architecture for the future without dark cyber powers.

The pathway of human driven digitalized societies and markets with autonomous enterprise partnerships surely could pull real value global networks in local level playing fields with integrated fiscal authorities, to limit casino and blow by transparency and individual spirituality as a game changer for all.

1987 UN answered to the predicted iron rules of global climate limitations of the Club of Rome and started 2000 with UNGC its pathway to sustainability strategies for a human face of globalization with stringent task to safeguard fast growing mankind, by enterprises, Entrepreneurial interests, civil societies and politics in UNGC forecast 2016 their matching in measurable sustainability with innovative real value creation for human safety and security with peaceful paradigms on regionalization and institutionalization in economics and politics.

Empowering each human being by better education and by the general access to independent communication in IoT lead and led to abilities fostering increasing independence and self-conscious humans in their role as political individuals in all societies and customers in all markets, strengthening a human driven economy.

In modern cyber relations as the classic business to customers or traditional societies to consumer relations the digitalization means a cut and 360° turn around in the

relations for the governmental or the entrepreneurial partners to their “sovereign sovereigns”, the people. To continue the progress in responsible leadership in partnership, all free societies, push the political administrations and market suppliers to manage the new abilities to be on the safe side of prosperity in transparency with their people and customers real desires. This key paradigm changes are accompanying the globalization at any place and in any family with a new role of humans as driver for political, financial and entrepreneurial change in transparency for a vibrant living in the future.

Only human desires create permanent unlimited qualitative and quantitative growth strategies around the world. In digitized cyber markets this human desires will drive and realize unprecedented technical, economic and financial performance. With 3D holograms, digital virtualization, data visualization and process simulization new entrepreneurial digital abilities create unlimited valuable workvolume for all products, technologies and workflows in manufacturing, trading and services, ever shared with customers.

Enterprises will use in human driven entrepreneurial value networks the robot assistance as winners, also in the new tools in change management, in assistance of scientists, in flexible research and development and all parts of intensive technical responsibility to markets and societies.

TIMA strategies and structures guide entrepreneurial drivers to the new value networks of prosperity for humans in digitized societies and markets within the 10 UNGC principles to identify opportunities for individual entrepreneurial abilities in value networks:

- in game changing the individual “entrepreneurial” lead as customer in societies and markets in the relations to business with corporations
- in game changing the sharing between owners and entrepreneurs in autonomous digital SME's partnerships of value chains.
- in game changing rights in dispositive responsibility for employees in local SME's partnerships for innovations
- in game changing decentralized automation/robotics assistance in SME's partnerships for materials printing and upstream high end finishing or downstream low cost bundlings

- in game changing digital SME Partnership strategies at the bottom of the pyramid in free social market economics 4.0 with autonomous entrepreneurial SME's, regulators, in cities, in districts, in industrial belts, in aviation ports, in maritime centers, in deep sea stations and other cyber hubs.
- in game changing principles of local subsidiarity driving the circular economy in value networks of digitized SME' partnerships
- in game changing guilt-edged investments for long term work and wealth relations in high performing digital SME partnerships in real municipal value networks for standardized market 4.0 frameworks of sustainability
- in game changing with unlimited growth by the work and wealth perception for local SME's cities value networks at the bottom of the pyramid with guilt-edged securities and digitized financial flows at any place
- in game changing by SME's statesmanship creating administrative real value networks of better education, housing and living, attractive performance and reliable tax flow at any place within the Primacy of politics, the wealth shift of hope in family driven partnerships for measurable sustainability
- in game changing in SME partnerships to stabilize and strengthen in family driven local value networks of infrastructure in free societies and markets with access for all.

2.0 STRATEGY

Human driven digital societies and markets with UNGC principles for sustainability in cyber globalization

TIMA International shares and guides family driven enterprises with high performing digital strategies and structures fitting digital UNGC principles for sustainability and create individual local value networks with business partners for the local supply side at any place and for any human desire on the demand side at any place by digitalization.

TIMA is a private driven German SME enterprise since 1996. TIMA is delivering strategy and structure in joint rethinking and reengineering with clients, ready for business partnerships in value networks. TIMA clients are game changing entrepreneurs for vanguard manufacturing, trading or services to fit or anticipate upcoming paradigms to human driven societies and markets relations.

TIMA guides international clients with European idea of man, in measurable UNGC sustainability, in worldwide autonomous entrepreneurial partnerships, in digital value networks, building better local market flexibility and more local abilities for increasing digital globalisation. Our human driven perception for cyber markets identifies opportunities of better living and prosperity for all, within a steady growth by network innovations as driver for work and within steady save wealth development as driver of capital shift to growth in human driven economy by global partnerships – “Made with Germans”.

The TIMA core business is the design of an individual partnership strategy to understand and design connectivity to customers desires and guide, create and build the individual enterprise structures to develop digital abilities for real time mutual understanding and virtual communication. Guiding the new management into new entrepreneurial process responsibility to transmute desires of markets with sustainability standards to measurable order fulfilment and payed deliveries in real time. With embedded services in IOT and 4.0 standards the vibrant contents of real value network partnerships shape the individual profile.

With the TIMA approach to human driven societies and markets we guide to develop, design, promote, implement and manage with our clients and their staffs their sustainability strategies of growth, efficient digital structures and flexible operational performance in processes for a globalized partnership framework. We share and exchange services to mutual application of the 10 UNGC principles and the proved German and international GRI standards in fractal local partnership rules. In all share- and stakeholder interests, in all internal and external applications of the individual value network business partnerships, they improve the performance and social stability of the capital investments with their new relations to society or the market.

TIMA strategies or structures of human economy manage the transfer of the free social market economy Codex of German industry and society into cyber based services of industry 4.0 and IOT communications, with the public licence to operate vibrant real value networks of human driven robot assistance. We encourage german enterprises to participate in autonomous cyber partnerships for science intensive innovations, in sophisticated digital work sharing and guilt-edged digital wealth co-operations within international borderless platforms and value networks.

With this broad range of cyber strategies, we support in Germany, Europe and all other countries the digital TIMA SME statesmanship in local partnerships with phenomena “made with Germans worldwide”. creating unlimited new digital and steady growth for real work.

This phenomena strengthens the order fulfilment abilities in all human workforces of enterprises, entities and institutions, realizing vanguard growth opportunities through the driving personalization in human desires as customer desires – in the cyber based digital societies and market economies locally and at any places worldwide in developed and emerging environments. This impacts high speed real value demands and supplies by modern structures for zero time to cyber market migration.

To build a solid base for key real value creations in all societies, TIMA Work + Wealth guides sophisticated digital skill sharing and knowledge exchange to individualize and empower humans by education to participate as skilled market partner or dispositive factor as employee in enterprises and government administrations.

TIMA promotes self-conscious free humans creating new markets and / or serve the markets with new human abilities. Well educated people driving local environment to sustainable global circular and innovation economy with human responsibility in subsidiarity and as reliable human dispositive success factors. In all cultural pyramids at any place humans deliver unlimited virtual resources for a qualitative and quantitative growth. They stabilize societies, enterprises and capital markets in free human driven democracies.

The democracy model of German social market economy inspired TIMA owner Dr. Achim Deja to share the individual Christian based idea of man with digitalization of societies and markets in measurable global sustainability. In such TIMA strategies and structures the digital value networks of SME's partnerships are highly competitive by an overall decrease in production and marketing cost intensity. Digitalization, new capitalization and technologies contribute the lowest capital-, material- and technical cost intensity in digital business partnerships. The vibrant superior cyber value network competitiveness is game changer for all innovation driven and circular driven economies for all at any place.

This well-known abilities of international German family driven enterprises offer with more than 3,1 Mio. autonomous SME enterprises opportunities for new forms of digitized worldwide partnerships by “TIMA Made with Germans” opportunities.

All capital markets re-think and reengineer strategies and structures to downsize the old economy complexities netted in decentralized value networks in mobility industries, extractive industry, heavy chemical industry and steel and aluminium industry for the coming decade ahead. Within clean energy solutions including nuclear technologies, all circular and eco-system technologies, sharing and exchanging on flexible autonomous robot stations and robot assistance in large scale is still far away from reality.

In capital driven or central driven societies the fall behind this game changing sharing of individual cost factor structures in millions of digitized value networks with SMEs in high tech manner and lowest time to market flexibility by adequate digitized value networks and technologies is a key issue for all SMEs with MNEs

TIMA is contributing and sharing with its specific experience in human driven solutions in strategies and structures with all humans in charge for the primacy of politics that are drivers to organize a better living in national human safety and security situations. TIMA also is a reliable partner in all entrepreneurial task-forces, that are focused to serve as innovative and smart partner with high performance to drive the commutation of individual work to personalized wealth for all in the digitalized value chain partnerships.

Actually TIMA realizes the fractal rule to act with the same principles in all visions and missions for a cyber clearance in human rights and international law to protect humans in the upcoming robotics assistance of digitized automation in the individual value networks and SME partnerships.

These are drivers for opportunities in a new human architecture in national and global framework of sophisticated free cyber playing fields. In digitalized sustainability, governments and their fiscal access to partnerships in local and global value networks, open direct short term pathways to create save heavens of real wealth development for the “Capital shift of Hope” and for the reliability of inclusiveness in medium term road maps for societies and new guilt edged long term stabilizing in intergenerational contracts of social-, health- and old age/retirement-pension systems

for the people, co-financed additionally in outperforming digitalized SME - partnerships at any place.

This mutual understanding of human driven economy means that any human being is a valuable individual driver in any society's economic framework and the cornerstone for the sustainable future of any business relation. Human are the game changer for the national and international legal options to protect individual human rights as the motor of real work and wealth in all markets and societies.

This marks a fundamental and vibrant new ability by all individual humans deciding first time as a "swarm phenomena" in all daily human market relations in private and public life, how to contribute to the better of all in our mankind's history. It is the sophisticated task and challenge in all business relations to understand, to deliver and to learn to commutate the real desires without marketing impacted falsifications.

TIMA GlobalCon strategies and TIMA SustainMan structures balance the processes between all parties of interests in the local game of power. This raises with TIMA InNetMediation a new business role to share in value networks their best abilities within digital netted partnership. Entrepreneurs build individual digital customers services and most efficient personalized cyber market flexibility. With global data transfer between digitized technologies for robot assistance autonomous entrepreneurial partnerships using innovative value network materials for highest competitiveness in quality and speed to profile a value network brand on TIMA Quadruple A abilities. Focused on the adequate fulfilment of their key desires customers decide to buy and pay in commuted relations.

This is causing in wealth managing markets a 360° shift in all financial success factors based on factor cost and responsible investments and on new collateral value benefits on sustainability factors or other shared virtual and scientific opportunities on the cost of financial intermediaries with investments in smart new work and wealth relations and humans individual performance.

This strengthened role of performing humans in municipal digitized value network with convincing impacts on democracy and freedom in a changing architecture for all, becomes the most ambitious digital challenges for the primacy of politics at any place.

New approaches by human driven sustainable cyber economies follow a successful transformation in digitized comprehensive international science to deliver a decentralized access to clean and high energy intensity in affordable and safe circular economy solutions, through renewable, nuclear and fusion technologies, within reliable and economic eco-systems. Nearly all key global infrastructure processes benefit from digital advanced and smart automatization with sustainable applications in downstream and upstream or down scaling and up scaling opportunities. Human driven local circular economy creates the best access in high-tech solutions to affordable energy, to massive robot assistance and decentralized highest market flexibility. All these three game changer for sustainability boost directly the innovative increase in humans work and employment by digital industries for robotized benefits in unhuman situations, as in security and defense, deep sea, mining, sub urban, permafrost and desert landscapes, tube-logistics, waste, water, housing and deliver talents through digital education, for digital research. The actual development of industrial high tech materials in new powder metallurgy will enable further vibrant layer technologies of tomorrow.

With scientific designed molecules, liquids or powders fitting Nano-biological, physical and chemical quality characteristics in organic and inorganic materials an unprecedented low factor costs intensity of capital-, material- and technology-cost will lead mayor capital flows to innovative and infra structural investment in human driven cyber economy and a human driven cyber society with a balanced capital shift of hope, clear frameworks for automatization and robot assistance to humans.

TIMA strategies, driven by facts and figures, innovate flows and relations for added values in modern society and entrepreneurial globalization by digitalized partnerships and sophisticated value networks for sustainability driven by humans. Game changing outcomes of real value creation, benefit the SME partnerships with a steady wealth grow in the near future, in an optimum way of game changing “work” to outperform the capital intensity, material intensity, human intensity and sustainability intensity in a comprehensive factor cost leadership for unlimited qualitative and quantitative growth in value net markets.

Dr. Achim Georg Deja TIMA International

TIMA philosophy of human driven economy

Each full age human being is a serious “entrepreneurial” customer or consumer in the digital societies and markets and global individual participant in new personalized local SME consumer-corporate cyber relations.

Customers/consumers insist in future to share their desires on their preferred deliveries of things in an exchange with their digitized individual market participation as driver of cyber growth. That means clients/customers are calling for highest digitalized market flexibility to get things done in shortest digital notice or permanently automatized and want to be digitally payed instantly. The digitized customer makes the individual human driven digital philosophy for society progress a reality and the digitalized industry delivers the structure of economic progress to organize the value networks of entrepreneurial operations globally.

A fast growing part of such consumers as professionals or individual humans feels therefore irreversibly misunderstood by the old fashioned Taylorism philosophy, that turns whether it is a centralized or capital driven philosophy always into similar profits driven structures by virtual marketing forms and visual impacts in subtly ways on millions of entrepreneurial platforms to influence daily millions of people to by what centralized or capital driven players want to sell as products in competing entrepreneurial platforms via TV, via apps, via social media or more sophisticated via holograms, via gaming tools or other 3D simulation tools, but in reality serving financially installed technical structures as wright offs in each enterprise, even firing the humans, when their financed machines have a loss producing underload or just

fail to fit markets. This is a misuse of golden rules to finance societies progress with economic progress as e.g. stated in “organization follow structure and structure follows philosophy”.

In the digital cyber world each individual human desires requests from enterprises employees the ability of a human mutual understanding for the transmutation of any customers creative wish into a personalized offer back to the client to realize a customers driven financial commutation for the outcome by the enterprise flexible operations with their corporate market communication and technical local abilities, whether in service, trade or production.

The basic rule that organization follows structure and structure follows philosophy means in digital markets and societies that customers desires decide the new industrial structures with data driven platform provider and IOT driven corporate value network partnerships and this entrepreneurial structures steer the operative managing of innovative deliveries in real time or manage the use of circular infrastructures in real time, always in the local environments. With such unprecedented market flexibility and augmented high end decentralized automation at any places, the digitized human driven economy is a superior pathway to society progress in social market cyber economics, pushing technologies, innovations and growth in real work and real wealth for sustainable society progress.

All these structures follow human driven philosophy to anticipate sustainability and vanguard wealth and work factor intensity developments for superior overall performance in a social cyber market economy,4.0. Within digital SME globalization, entrepreneurs share their innovation in TIMA SME CytoGrowth opportunities as a key social market drivers for game changing in all societies. Build at the bottom of the pyramid the global IOT standards came from IT drivers in IPSO and cross industrial sector standards, industry 4.0 from drivers of IIC to keep the digital progress in the access to improvements up to date for all SME's to participate in all market value networks.

The SME partnerships

2014 the TIMA sharing and exchanging activities within UNGC underlined in all continents, the new cyber-sustainability game changer role within the UNGC principles for family driven enterprises in digital SME partnerships:

TIMA shares, guides or serves with and in enterprises comprehensively the game changing. To transfer the enterprise from the frame of climate risks in a broader social market economy architecture of the digital future, a strategy portfolio of “society and market to business” relations with low, middle and high importance in the individual family enterprises and their opportunities in SMEs partnerships is the first strategy approach in GlobalCon.

The sophisticated experience of digitally skilled employees are in the entrepreneurial input-output balance a strong benefit as value network driver and important part of the human factor intensity one of the key success factors for the technical and digital lead of SME partnerships at any place:

The usage of smart skills and education sharing digitized virtual desires of customers in the individual SME technical and digital structure to deliver the real products, in days’s tradings or services. Within multiple personalized customer relations the innovations of the SME partnership in goods and services are the driver in the game change with quality, transparency, pricing and zero time to market. These vibrant flexibility in digital enterprise SME partnerships merge the “work and wealth” development.

The digitized data’s disposability of all processes in handling new materials in automation for real time net shape finishing are in an entrepreneurial input-output a key benefitting value network driver within SME partnerships on the material factor intensity and also a key success factor in the technical lead of SME partnerships at any place by automation or robotics. In a broader complexity reduction strategy in traditional mass productions of mobility, pharmacy, medical disposables, food, apparel industry and housewares the local digital SME partnerships share the opportunity as smart game changer:

The usage of individual SME processes and technologies within participation in standardized digital circular systems for multiple individualized customer relations. To deliver upstream innovations in zero time to market and down stream circular material replacing wastes within product life cycling, the fitting technologies and the outfitter solutions drive vibrant effects for digital local SME partnerships on material cost factor intensity

This wide range of sophisticated digital SMEs partnerships can share in new wealth developments at any place. With very different options for opportunities the SME partnerships for new infrastructural relations include the big data platform providing and IOT to manage new materials sourcing and life cycling for energy intensive industrial drivers, or in the ECHA logistics of organic and inorganic materials in chemical industry, as well as in all pharmaceutical, health and life science fields with local processes, services and automation.

At any place the sophisticated digital SME partnership expansion with TIMA SME CytoGrowth is the vibrant local digital driver of a future around the world. With a lead in market flexibility and with reliable internal smart knowledge and skill transfer all innovations and circular applications serve customers demands. In the follow up of these game changers the outfitter industry, coupling micro and nanotechnologies, the optronics, photonics with self-learning Biosystems from health to mobility industry can use the same paradigms to improve the efficiency in their basic frameworks on replacing traditional Taylorism of production factors by digitalized international SME partnerships in the new sustainability factor economics.

The sophisticated digitizing from industry 3.0 to 4.0 integrates all forms of financial transactions on the entrepreneurial input – output, benefitting the value network drivers of the SME partnerships changing fundamentally the success factors of capital factor intensity with vibrant options to wealth development in new safe harbours of men and machines relations:

The usage of digitized money, and the option of guilt-edged investments and securities to participate in the professional transactions business, by replacing higher risks for all in local globalization, opens further new forms of business relations between family driven SMEs with all digital services of finance intermediates as bankers, reinsurer, insurances, wealth and stock exchange. They drive family enterprises in a new role for the international local SME partnerships and even out a substantial increase in benefitting of SME CytoGrowth partnerships in their key effects in new globalized public and private SME business playing fields.

The digitized sophisticated services for sustainability improvements in digital SME partnerships stabilize all benefits in competitiveness in the changing production factors. Developing employees' initiatives and entrepreneurial sharing with public licence to operate drivers, the "SME statesmanship" creates various individual

additional input-output benefits in digitized sustainability for the 10 UNGC principles in all SME partnerships.

This vibrant Kingsway to performance and unlimited prosperity within an ecological social cyber market economy is an attractive vitalization for any primacy of politics rethinking of the proved traditional merits in social market economy in northern Europe for the future. In a convincing role the digital SME partnerships share in digital SME CytoGrowth the autonomous entrepreneurial responsibility in the global game changing for better living for all with autonomous SME statesmanship and most attractive transparency in wealth and primacy of politics:

The usage of a UNGC sustainability factor for the public licence to operate in digital SME partnerships with access to all markets by digital SME CytoGrowth is a big investment game in local growth in cities and rural areas worldwide. This digital contributions of SME partnerships to measurable game changers for the “magic square” of any national economic policy briefing is the Kingsway to better employment, balance in foreign trade, continuous growth and currency stability. In developed and emerging regions at any place industrial game changing raises the opportunities for value networks outcome by SME partnerships within the local primacy of politics.

All digital SME partnerships opportunities especially in CytoGrowth drive fundamentally the change of strategies for any enterprise balance sheet development and capital structure development to vibrant wealth and value development in the frameworks of sustainability and digitized SME partnerships.

The central push to decrease generally the productions factor cost intensity by digital SME partnerships in globalization follows first the unique individual customers market flexibility transmuting virtualized desires” in digitized automation of immediate real goods in manufacturing, services and trade, with basic materials in local 3D layer net-shaping processing, fitting quality and sustainability with unlimited qualitative growth . The second push comes from shared autonomous entrepreneurial SME partnership with wealth entities transferring digital money into high performing value development and unprecedented completeness opportunities for intergenerational contract financing, delivering monetizing, capitalizing and marketizing services in all innovation and circular economics. The third push to low production factor cost intensity is the stock exchange fantasy of private investors in local SME partnerships

at any place, generating strong financial stability and remarkable relief to public households by this access to free capital markets establishing new forms of subsidiarity in local primacy of politics

Generating advanced production efficiency and lowering the production factor cost intensity per unit of turn over within a corresponding increase of the total operating output per year by the accumulated learning curve in digitized CytoGrowth, the market expectance is high. Within the frameworks of a social cyber markets economy the increase in the UNGC sustainability factor intensity is negligible compared to impacts by higher innovation rate, market flexibility and growth.

The annual net income and the regular capital increase drive investments to transform innovations from intangible assets in tangible assets. The extension of assets of digital SME partnerships within a balanced dividend policy for the increase of capital stock and capital structure improvements raise the local outcome for “work” and EBITDA, benchmarking the high competitiveness of the digital SME partnership by shared innovations in local CytoGrowth. The goal for stable growth of employment, the base of continued improvements in higher incomes and the better frameworks for lifelong employment, education and inter-generation fairness are solid contributions of SME partnerships, beside sustainability and regular tax flows, to the social cyber market economy 4.0 for all.

The SME game changing value creation

The global TIMA SME partnerships primary aim is value creation in cyber age value networks in the frame of sustainability. In six different TIMA perceptions TIMA enables SMEs to measurable sustainability in 10 UNGC principles, to build and individual spirituality to share a brand name for digitalized partnerships, creating values for customers in new environments that helps to sell more products and services in the partnerships of sustainability. The understanding of the digital impacts on real value creation in SME partnerships (shareholding-families) by the wealth foundations, raises beyond assets and earning increases, the stock exchange value for the owners, insures the future availability of investment capital to fund the partnerships operations.

Benefitting financial perspectives, the digitalized partnership values are in principle higher than the business of all partners and they earn revenues in a return on capital

that exceeds expenses or the cost of capital of all parties in the partnerships. Within the TIMA six perception broader "value creations" in digital SMEs partnerships are focused on game changing within intangible drivers like innovation, people, sharing, ideas, and brand with an entrepreneurial approach in SME social cyber market philosophy. Underlined by technical solutions in personalized connectivity and individual contents and factor efficiency, the unlimited plurality in diversity creates the future, replacing the strict financial measures of performance only, many of which tend to place cost-cutting that produces short-term results ahead of aged investments. With the TIMA SME partnerships we enhance unprecedented short, medium and long-term competitiveness and growth with individuality in dispositive human factors and local autonomous entrepreneurial access to free capital markets

In this evolutionary development, TIMA SME partnerships making value creation the first priority by all employees. All partnership decisions share first the right way, that the managers will know where and how to grow, deploying capital better than traditional competitors to develop more talent than others. Digital exchange between the local demand and the flexible value networks of SME partnerships are a vanguard advantage of growth in partnerships of protected individual ideas and the basic structural game changer in the digitized TIMA SME's CytoGrowth and TIMA digital SME Service perception.

Quotation: "Already 2004 Robert S. Kaplan and David P. Norton wrote in their book Strategy Maps for scorecards: Converting Intangible Assets into Tangible Outcomes. If customers value innovation and high performance, then the skills, systems, and processes that create new products and services with superior functionality take on high value. Consistent alignment of actions and capabilities with the customer value proposition is the core of strategy execution. Although the intangible factors that drive value creation differ by industry, some of the major categories of intangible assets include technology, innovation, intellectual property, alliances, management capabilities, employee relations, customer relations, community relations, and brand value."

A decade later 2014 TIMA SME Statesmanship shares directly the dispositive entrepreneurial power of minds in enterprises to transmute the desires of customers in their digital networks of works in high end pathways to prosperity for all at any place. In the decade ahead, the decrease of cost intensity in capital factors, material

factors and sustainability factors drive as success factors for better living, the automation with a human dispositive lead in transparent safe heavens of economics for the capital shift of hope. The new alliance framework of Work + Wealth within the primacy of politics is the future at any place in any social pyramid shouldered on SME family driven enterprises worldwide.

2014 TIMA explored the existing digital connectivity and contents shared between customers and the managers for these intangible assets and value creation for the the SME partnership strategy. It is important to note that investments made to enhance intangible assets to tangible outcome (digital research and development, digital employee training, and digital brand building,etc.) usually provide indirect rather than direct benefits. On this exposure pathway, focusing on digital value creation forces in an organization we adopted a vanguard economic portfolio as sharing driver on idea and design perspectives to adjust the resources allocations toward tomorrows customers roles, desires within entrepreneurial goals.

TIMA transforms and integrate advanced masterplans of creative added value networks in a sustainable cyber social market frame. In vanguard SME partnership strategies for all in globalization we are drivers for IoT and industrial 4.0 structures with a human face of work and wealth in integrity. These paradigms follow the key success factors of “work and wealth” benefitting educated and skilled humans in stake and shareholder environments to realize the 10 UNGC principles of sustainability. In TIMA SME partnerships perception on SME statesmanship this is described with a smart sharing of outperformance with better living in digitized SME partnerships.

All humans working in an TIMA digital enterprise partnership are committed as individuals, to sustainability, learning, understanding, transferring result of automation and robotics in IoT structures to customers and social media. Humans want seriously to share with other people in society and markets communications on enterprise goods in respected individual spirituality within the value creating networks on innovative products, comprehensive services or sophisticated smart trading.

Creating the digitized and real outcome for customers demanding for professional efficiency or for the personalized desire in products of better living, life science, life style and aging, the SME partnerships contribute to the local plurality and/in diversity.

The serious game changing competition of globalization is family driven in SME partnerships with intergenerational effects by a free, self-personalized skilled and sophisticated working and managing environment, fitting transparent social cyber labor standards of UNGC principle within individual spirituality.

2014 the cyber – age communications as new economic and cohesion frame offer societies and markets a unique choice by IoT, the Big Data and G5 communications in the future. For everybody openly written on the wall is, that especially in local SME partnerships a new global and local “completeness” by digital face to face and man to machines, will change the sharing messages and turn around with smart value networks of local SMEs improving the situation of people at the bottom of the pyramid into an educated and skilled participation for “work and wealth” at any place and in any environment. With the TIMA CytoGrowth forms of partnerships, this can be realized in the pace of development. It is on the wall for all leaders within the primacy of politics globally.

In 2014 the pathway for a post climate change to sustainability by all states is anticipated in the new local value creations by SME partnerships as a part of the overall economic evolution within a reasonable primacy of politics. The regulation opportunities of the progress in cyber based value networks for automation and the use different monetizing principles in IoT turns the entrepreneurial factors intensity of SME partnerships of capital, material and personal cost in global netted entities of SME partnerships into an outperforming matrix with strong cross border local socio-economic benefits and stable inflows of tax to the governments.

From 2004 to 2014 TIMA contributed to rethink, share and turn around the game in digital society and markets to a customer’s face to face digital privilege in the change of digital relation with employees in enterprises, the next outcomes are determined by human-machine relations to serve human desires, human safety and increasingly to human security.

The SME expanded perception

TIMA contributes in six perception of GlobalCon, SustainMan, InNetMediation, Work+Wealth, CytoGrowth and SME Statesmanship to build the measurable UNGC sustainability in digital SME partnerships. These perceptions are shared and guide SME partnerships in the economic frame of stable and real cyber brands with reliable

entrepreneurial orientation on better human living, human safety and human security as free society outcome, national tax inflow and wealth stability and free markets access for unlimited post climate change growth. The autonomous entrepreneurial performance focus on transparent real value networks for peaceful pathways to global sustainability with individual spirituality.

The SME perception for sustainability in an overview:

TIMA GlobalCon – to build the way for partnerships with the best fitting individual technology of platform, connectivity and content to be shared by individuals as customers or consumer of enterprises is the strategy masterplan for a value network partnership in Sustainability and , as part of industrial procedures or as part in the governmental issues to get most reliably, affordable and benefiting solutions on what they demand for and how to build and implement it.

The decisive game changers elements of GlobalCon are resource allocations factors and time savings marks in all sectors to manage the explosion of diversity and plurality in local demand and individualized needs of robotized and digitized manufacturing, after sales services and logistics of trades. GlobalCon game changers manage personalized scientific and increasingly digital data, virtualization and communication driven replacement of mechanical, technical components and modules.

Within innovative science on inorganic and organic material factors to finished goods delivered, substantial individual game changing happens in microsystems as well as in macro systems.

To fit SMEs in partnerships with GlobalCon as driver for fast growing employment in all local technical services, the general science, infrastructural and governmental assistance are public part of the cyber economic roadshow to overcome the traditional industrial rationalization efforts of down scaling, with a landslide employment and innovation exchange system for SMEs partnerships. On short distance the GlobalCon drives game changing relations between entrepreneurial abilities and consumers and professional demands of markets and governments to create comprehensive opportunities and avoid a growing gap of “successful” failures in all governmental procedures of game changing relations between regulators and public sector and local entrepreneurial autonomy.

In all aspects the GlobalCon drives and pushes capacity building and knowledge exchange in skills, education, a base for social cyber-economics and UNGC principles of all human beings in the cross border partnerships. This vital advantage of entrepreneurial participation in the virtual and real game changing of the growing global markets in all local situations, independent from the status as developing or emerging society is a key success factor of sharing in partnerships, and the actual engine to business statesmanship on LEAD Partnerships level, With the upcoming SME Statesmanship the future of millions of enterprises worldwide in any digitalized “Society or Market Pyramid” will run this change the game for all by human driven free social market economy 4.0 plus

TIMA SustainMan – to do it better, rethinking and reengineering of small and medium enterprises as well as MNEs or Hyper Global enterprises on fractal solution in netted partnerships to be the winner in the game. The result is the personalized way to realize customers desire to all products, services and gaming realities in life science, lifestyle, issues of living standard and sharing in all industrial value network of the future.

TIMA InNetMediation – to guide the best, driver for outperformance, matching human safety in value networks of SME enterprises – following the perception on individual spirituality to guide the core strategies of partnerships within measurable UNGC principles. As game changer this tailored frame heads to serve markets and societies with SME services, for simulated and personalized completion of customers desires and orders with all production factors focused to competitive flexibility strategies up to zero time to markets.

TIMA Work and Wealth – to create prosperity, central core business of TIMA for multiplying dispositive work and entrepreneurial innovation on “CytoGrowth” economics of SMEs Partnerships for real added values, high capital performance in post climate change value creating networks. The game changer in workflows of manufacturing, trading or service in public and private value network partnerships follow downstream and upstream opportunities of personalized markets to optimize the individual perceptions of price-performance ratio and value for money or tax.

Digitalized structures as IoT the internet of things outperform in individual and personalized workflows the code digits on capital factor intensity, material factor

intensity, human factor intensity with the sustainability factor intensity all want for better living with new structures of enterprises in flexible operations.

With unlimited general cross border growth in wealth development TIMA Work+Wealth surpass the former mechanical industries, revitalized and boosted by innovations values sharing in materials, technologies, processing, products, services, logistics and serious added value creations to become a serious game changer in metals, chemicals, and with precision parts casting, extrusions, fasteners, for aircraft, trains, automobiles or all heavy industry parts in energy, ships, mining in civil and defense products with the digitalized outfitter industries.

For wealth performance the combined IOT, social media and Big Data structures broaden or break all traditional profitability limits for factor input for value creation, enforcing a global SME partnership CytoGrowth for local prosperity as drivers for employment and work in the bottom of the pyramid in all countries, harbour and industrial zones, and in all large cities with city mining and life cycling in circular economies.

First human based factors on goods and services result in much lower factor intensity but higher employers incomes benefitting from better education and qualification in research, programming and engineering and digitalization for stringent market flexibility with unlimited growth, replacing former playing fields with augmented automation and communication in science, marketing and logistics, eroding some ugly face of Taylorism and overcome the manipulation force disclosed by Packardism with technically matured customers and stakeholders. The better living is directly bonded to the sustainability factor in TIMA Work + Wealth.

Second material based factors, organic and inorganic, raw materials and supplies, local facilities and utilities, maintenance and other operating cost, fundamentally decrease in intensity by structures with connected high tech science, along the value chain of integrated global circular reprocessing of everything in mining, extractive and processing and metallurgical industries with high energy intensity. Applied science and apps in downsizing or replacing of harmful substances in bioengineering, chemical engineering, energy engineering, pressure engineering, increase the efficiency in the use of material cascading lifecycle effects. Also the re-use of industrial and consumers output accelerates the SME CytoGrowth by additional local value network partnerships with innovative processing centers

pushing employment and prosperity by real value creation in partnerships at any place.

In TIMA “Re-Vaporware” based strategies manage fascinating global value chains and life cycles on products with reduced material factor intensity. SME partnership value networks explore and share in digitalized exchange with government, academia and industrial research the periodic table of the elements with an increasing number of substances. From food to steel, from composites to organs, from textiles to paintings, fitting and matching by outfitters and SMEs partnerships virtually designed for 3D print and connected m2m, machines to machines, robotics and technologies as well as laboratory processes to realize key changes in business generating opportunities in the near future.

With preeminent digital SME partnership multiplication for selected workflows on all kind of mass or luxury goods with flexible steering, manufacturing and delivering in lower complexity barriers, the global benefit and contributions to growth and employment of SMEs in partnerships is measurable in all upcoming industrial belts.

This improves the local sustainability factor within legal architectures all want, to realize the cross border and cross regions access to vital continental industrial rail and belts, or maritime ship and harbour belts and mega cities as drivers for plurality and diversity in growing markets.

Third the capital based factor of building worldwide local “TIMA Cytogrowth” in SME partnerships is based on the strategy of combined work and wealth for digitalized SME champions with much lower capital intensity for higher outcome based on the better structures and strategies from 1 \$ revenues or profits invested by entrepreneurs in family driven digitalized SME partnerships. This is independent of upcoming tendencies to digital money and bitcoin aspects in the future. The basic capital and wealth interests for the cyberbased partnerships within a shareholders’ agreement, the integration agreement, any transfer of assets, and the intellectual properties regulations are basically driven by the opportunities to upgrade all partnership businesses by combining global and local opportunities for championship in transparent prosperity sharing.

The integration in all partners locations is managed by the local subsidiarity within an multidimensional Governance based on the shareholders’ agreement of the owners

with real time data exchange and communications in subsidiarity level . The owner commit to an irreversible process of mid term partnership renewed after the mid term period with the alternative of longterm partnership to avoid divided ownership or unregulated use of intellectual properties or ownership rights or any kind of value destruction between the partners.

Wealth not cash is required. Wealth will increase by work and shared by all. All SME owners pay the partnership with their own assets or shares. Work + wealth partnerships invest the hidden champions. All obtain the business of the other as contributions in kind of internal reorganization for the other local business lines. All innovations where exchanged and shared in all business lines by all sides, as a driver and accelerator of TIMA CytoGrowth by multiplying the partnerships in strategy of wealth masterplans in shared structures, comparable to the principles of cytokinesis.

The result of the TIMA strategies and structures are measurable in the outperforming of a social market ROI in the digital cyber economy. The sharing structure of the system is more competitive in markets and societies, compared with the traditional financing and M&A in new products, processes and market migration caused by the combination of IoT and Big Data with entrepreneurial flexibility and integrity in social markets solution managed only by the owners for the fast growing completeness with responsible inclusiveness as force for the better for all, within the 10 principles of UNGC.

TIMA CytoGrowth – to multiply the growth and presence, with individual human responsibility within entrepreneurship in units, to win the clients or customers in most vanguard society inclusiveness and completeness by sharing legality and subsidiarity for a vital society of globalization with well guided performance.

The political second track of the chamberlain/treasurer with entrepreneurship on Lord Mayors city - level will increasingly understand the raise of importance in governmental subsidiarity for the evolution of local SME economic partnerships structures in “work and wealth”. Cities will bridge municipal common goods and infrastructures to participate in all human desires of better living, housing, education and lifestyle in freedom.

Sharing cytogenic multiplication in the nature is a nucleus to the evolution and growth. The TIMA strategy for a corporate evolution and growth starts with the nucleus of SME digital fractal structure to understand and steer the game changing. TIMA strategies for SME partnerships share not only the economic advantages in the business efficiency of IoT communications and the Big Data platform, but even more they share a business philosophy to use IoT and Big Data 4.0 as an human innovation laboratory with “SME-Cell” proliferation for SME partnerships evolution in all markets with value networks for growth.

The human role matches the traditional dispositive factor in all SMEs to use the digital world and its machines to manage all customers desires locally. In global economics the up scaling of the augmenting relation for innovations is the champion success factor of the partnerships, measurable in gaining market shares. The entrepreneurial global lead of SME partnerships with the same social market rules in cyber and real world with a human face for a free individual better living is legally embedded in the 10 UNGC sustainability principles and the individual spirituality for business integrity.

Similar to the mitosis in any SME partnership identical or impacted daughter cells are re- engineered within guided internal phases from prophase to metaphase, anaphase, telophase and interphase to re-think and re-build a better SME partnership unit to expand in an internal evolution the market presence, improve all local procedures and integrate the innovative parts in all SMEs of the value networks in an accordingly growing market matrix serving customer demands.

The TIMA digital CytoGrowth strategy for SME partnerships between independent owners of SMEs guides the key migration processes in zero times to markets to permanent and unlimited broadening of hidden innovation champion ship in plurality in diversity benefitting with all partners and stakeholders.

The attractice CytoGrowth within a work+wealth frame for millions of entrepreneurial “SME-Cells” for billions of human beings in globally spread local bottoms of the pyramid partnerships, drive the economic success for worldwide social market realities and all individual desires.

This strategy for CytoGrowth fits in all national environments as an additional pathway for Work+Wealth management whether in local innovation economy or in

circular economy to participate the game changing of large scale infrastructural modernizations in all markets and societies for government, finance, insurance, health, life science, life style, nutrition etc., but also in heavy industries, mobility, outfitting industries, wholesale business and all form of services.

The players of SME CytoGrowth in the playing fields follow divers interest but include all actual serious and legal entrepreneurial and governmental entities in legal frameworks for the architecture of the free social markets 4.0 development all want with local employment. The SMEs CytoGrowth partnership act as a new fractal in the digital economics, markets and societies and are the only old and new reliable job machine. As a Kingsway in sharing high tech in millions of autonomous SMEs partnerships globally the permanent learning curve on skills transfers between sophisticated CytoGrowth partnerships realize unprecedented market flexibility in zero time to markets everywhere.

This fractal of CytoGrowth enables globally top down and bottom up strategies for global down and upstream value creation at any place. With local industrial finishing lines, SME's partnerships empower the cascading effects to use from mining or artificially designed, materials to the end of the life cycling, in the value chain and the value networks connected and spread over all continents.

The structural economics key message of the TIMA SME CytoGrowth is, to benefit and accelerate by sharing the sustainability principles of the UNGC, the evolution that all human beings become educated and skilled for civilized participation by all in a face to face world of all within the better architecture for all.

The autonomous entrepreneurial SME's in partnerships are the most vibrant motor for better human living with the responsibility to serve the local primacy of politics. In all playing fields of the societies the SME CythoGrowth partnerships are drivers to rethink balanced local, national, regionalized and global prosperity rules and principles for intergenerational human personality building, human safety and human security in cross national, cross imperial, cross colonial and cross ideological and cross religious barriers. The actual human generation in the primacy of politics is manifesting worldwide rules of the post climate change era and multilateral and bilateral trading rules for daily real time business. Digital SME modules serve to stabilize within all SME partnership value networks the autonomous individual core

business lines of any family enterprise in safe digitized heavens of protected value creation and wealth interests of each participant.

TIMA SME Statesmanship – to share the game change, serving markets and society, with individual spirituality, measurable sustainability and cross cultural integrity. , In all changes impacting their digitized factors of success in capital, material, human and sustainability factor intensities, the SME Statesmanship shares balanced individual and public communications on progress, benefits and strategies with the society and markets. These are the cornerstones to contribute to civilized local environments in legality, safety and security.

The SME quadruple “A “ brand

The TIMA re-engineering of the corporate shift to sustainability in digital SME partnerships is like a DNA design with the staffs for evolutionary developments to create plurality in diversity, to master daily disruptive impacts with entrepreneurial responsibility as well as to match yesterday traditions in stakeholder and shareholder relations with to-morrow demands and game changer in markets and societies with integrity and transparency for all.

Our TIMA brand is TOE : TIMA services of Everthing – meaning at any place, everything starts with autonomous entrepreneurial spirit, in family driven SME's globally in partnerships and in the decade ahead in a digital performance..

2014 TIMA revised the branding on entrepreneurial SME partnership of families or private entities for the digital markets and societies. The traditional Taylorism approach in strategies to ascend from an SME with products to a hidden champion or multinational corporation learning to manage high complexity to provide global markets, was driven by upscaling the corporate marketing offers to a global product brand for all. The continuous upscaling of complexity for leadership in value creation migrated increasingly the listening to the markets by incapacitating customers with powerful collective think patterns for opinion making by marketing at the expense of flexibility and vulnerability in peoples trust. We changed within the UNGC sustainability approach our entrepreneurial approach completely.

2014 all our revised strategies for 2015-2025 change the game to ascend from SMEs with innovations to partnerships with transparent champions to open global value networks of SME partnerships sharing the personal desire of people as customers

with individualized innovation in zero time to market for all. TIMA integrated the listening to markets and peoples to manage high flexibility for personalized demands by decentralizing and splitting the complexity many times on multiple high tech SME partnerships in global sustainability. All activities were tied with the public license to operate.

The individual strategy for brand building of partnerships starts in quadruple “A” “work and wealth” classification of new SME partnerships in sustainability and faster fitting to the digital core desires of local demands and innovations. The branding responsibility shares the measurable commercialization with binding quality standards for all.

Within the different national masterplans on legal national sustainability goals the local partnerships create rising values in upscaling the value networks on public and private demands as part of the quadruple “AA” value creating in pushed business flexibility of customers in the digitized SME partnerships.

A key branding influence on digital IOT communications and 4.0 automation in industrial SME value networks is serving customers of societies and markets to realize regulation, consuming or industrial work sharing. With better performance and with more digitized contents of supporting applications, the commercialization for smart digital partnerships in quadruple “AAA” exceeds all high efficiency operational learnings curve of the past with unlimited vanguard pricing opportunities and expanded personalized content relations in improved for customer-partnership relations.

The by far most attractive game changer branding in SME partnerships is the efficiency of human to machine management in SME partnerships in local value networks of the quadruple “AAAA” stipulating affordability by virtual and real creative interdependency between the local government, the local SME partnerships stabilizing local societies and markets.

All SME partnerships have the public brand of sustainability by the economic claim of competitive workforce in high tech and the trust of wealth in performance and markets expectations of unlimited growth in their individual value networks :

First the autonomous entrepreneurial lead in partnerships drives the performance increase in price earnings ratio, resulting from better ROI on the partnership

integration with decrease in capital intensity, material intensity, personal intensity in smart partnerships for each € invested,

Second subsidiarity and dispositive factor of employment drive in high-tech SMEs partnerships the competitiveness to a low price performance ratio, with fast value network growth, with attractive customers services rise and innovations performance ratio increase in daily business using ICT and 4.0 digital structures and applications in operational playing fields

Third the sustainability image factor of smart enterprise partnerships with growing wealth and wages and climate protection, according to combined low cost down stream input – and high price up stream output drive fast growing employment, tax inflows and global pension fund institutionalization at any places of partnerships.

These key TIMA value network strategies point out the vanguard industrial structures with far reaching investments in customer relations of society to business and of market to business processes. This obligatory part within TIMA sustainability frameworks, is particularizing and individualizing the feasibility, stability, innovation and profitability in the future of digitized SME partnerships .

The SME driver of change in societies and markets

The TIMA anticipates 2014 dynamic sustainability developments in strategies and policy briefings on markets and societies for 2016-2018 in industrial and governmental game changing with new digital technologies. Independent of the companies or countries global pillars for civilized better living in a free and sustainable society are in the focus of the TIMA strategies.

2014 science based research in health and life science as well as in research on defense and space are key drivers for innovations in all society and market fields.

2014 TIMA sharing for 4.0 and IOT in social cyber markets economics

TIMA shared innovation economy driven strategies for digital game changing USPs for agro-, for forests-, for food-, for health- , for water- , for energy-mix-, for waste-, for hygiene-, for sanitary-, for art-, for jewellery, for skilled craft and trades-, for housing-, for living-, for Haute Couture, for garment-, for textile-, for mobility-, for pharma-, for lifestyle-, for life science-, for insurances-, for finance intermediates- and other augmented added value within specific plurality and diversities.

TIMA also shared circular economy driven strategies in energy intensive industry sectors claiming plausible multifunctional science partnerships for international leadership in innovative materials delivering impressive further USPs for partnerships of large scale industrialization at any place.

The reliable return for governmental tax flow with competitive adaptation and mitigation investments in carbon neutrality, renewability, re-usability for growth is a stronghold for all cyber based new social market economics.

2014 TIMA sharing of opportunities by digitized Societies

Politics improve their digital relations in all levels of parliaments, governments and governmental administrations with personalized digital structures in all processes of governmental power. Serving public Big Data according to the separation of power from autonomous legislative, executive and judiciary power for all “society to government” and “market to government” relations.

Digitalizing strengthens the primacy of politics with a transparent public administration of the country and all states and communities. The system of free democracy benefits the society with legal reliability and political agility to fit all diversities in desires of human safety and preventive security challenges. In cyber space and on the ground at any place and any time a real time connected governments communicate as individual human being, corporate or institutional partner, with all society participants in efficient decentralized local structures, increasingly in cities.

Many breakthroughs in comprehensive apps on regulatory requirement or legislative procedures, legal and national autonomous regions empower the government to lead the digital transformation. Realizing inter-ministerial staff participation in network partnerships for connected governance as well as all governmental services with the society and industry.

The governmental transparency for people and governmental market forces are serious game changer for innovative industrial services in “society to business” relations of politics, capital markets, and match global and local industries as well as “society to government” for the civil societies and the people of the country, a must for the better living in a free and open economy.

2014 the global society pushed both the employment and robotizing of innovation economy and of circular economy for industries in every national economy of globalization. With flexible and autonomous industrial downstream value networks and fast growing augmenting relations through creative upstream networks new realities of free social market economies can be shouldered in related tax flows.

TIMA sharing digitized search for opportunities

2014 TIMA revised views on global SME partnerships for – life cycling renewables, fusion-nuclear driven security, organic and inorganic materials science, safe mining, sophisticated high tech in downstream technologies for extractive, metallurgical and chemistry industries, in up scaling heavy industries in industrial belt infrastructures and services as well as upstream engineering components. All game changer in these fields are inevitable driven to brand robotics as part of free social markets in sustainability for a measurable intergenerational human face of economics all want with unlimited advanced services for SME partnerships in these industrial value networks of work and wealth.

The science intensity of modern pillars in the big business of global circular industry are additional global game changer and driver from research to virtualization, simulation and serious gaming to real workforce mobility of robotics or an innovative outfitter economy with growing work and wealth symbiosis for unlimited prosperity. They will re-stabilize the game changing environments ahead in digitized Taylorism with artificial materials.

In the digitized world, the human and material factors for industrial skill and science are matching capital and sustainability factors by open access to markets. The success factor for opportunities in the race of more than 25 mega industrial belts around the globe, with additional new continental and maritime born emerging industrial hubs along emerging international commodity and goods trading are some of the vibrant issues for the primacy of politics to cooperate with SME statesmanship to meet wealth in cross regionalized interests in a new capital shift of reality. The measurable agility in modernization of societies by SME partnerships was 2014 for TIMA a key message to share and exchange the issues with institutional professionals involved in the UNGC relations.

Eliminating the general regionalized approach from society and market strategies
TIMA SME partnerships are driver in the acceleration of globalization by city twinning.
National primacy of politics, empowering the cities with local political, entrepreneurial and capital principles for reliable subsidiarity can enable and create a free social market framework with shared value networks rules in SME partnerships. This accelerates all attempts to connect national top down with international bottom up procedures in the digital modernization, with benefits for all parties.

Fractal thinking and equal rules in all proceedings of upscaling sizes of local SME partnerships and wealth interests carburize the stability at any place of national economics on growth. In social market frameworks, work and wealth are forming a harbour all men and women locally want, investors need and politics desire. The TIMA frameworks agreement, based on fractal rules which are accepted globally, are a key for growth and better living by city twinning.

This TIMA “work and wealth” perception opens politics in all countries the pathway to unlimited globalized growth within national, regionalized and global harmony in all levels of security, spirituality and legal frame of mankind, to establish a post imperial and post climate change worlds architecture as force for the better especially on the bottom of the pyramid. (TIMA bottom up investments are highly attractive for cities, SMEs and Tax flows in stable and free societies)

The 2014 revised TIMA re-thinking, re-designing and re-positioning in strategic, structural and operative completeness for game changing abilities focus especially on de-centralized complexity in smarter relations, of ministries, trade and industries and financial intermediates for TIMA wealth and work perceptions.

Shared value network of SME partnerships 2014 maintain in all relations individual models of success with virtual creativity and augmented communications even in the smallest SME, with gaming and simulation access for customers, planning for tax flows and high quality and efficiency in governing, manufacturing as well as for convincing services. With serious local outcome in measurable sustainability, the innovative benefits are pushing the daily demand to better performance and steady growth of SME partnerships in TIMA “work and wealth” solutions.

2014 technology cases for “print, assemble and pack” personalized to clients, for consumer goods as well as individual scientific bio-economy contributions,

personalized pharmaceutical added values, or comprehensive robotics in high tech managing textiles or heavy industrial forgings, automation in mobility parts assembling or robotized services in orbital stations or deep sea manganese nodules processing and sophisticated services of flexible unmanned forces in defense, are all growing playing fields of real value creations with serious SME high tech partnership opportunities, favored in new SME partnership forms, within value networks participation in the environment for free social market societies.

From now on all complex structures of the past face simply a transformation to the better flexibility, faster agility and more plurality in all market and society challenges, whenever more society or market flexibility is requested in the future. This includes the situations when the big data availability dictates the decision making procedures or when decentral partnerships create better wealth performance in new value networks of to-morrow.

2014 this shared experiences guided TIMA UNGC activities and initiatives to enable SMEs to fractal thinking, within international relations and within the 10 UNGC principles for partnerships to match local digitized SMEs partnerships and global wealth interest in the future.

The SME a fractal of globalization,

aside of true and fair view in transparency and serious cohesion factors of long term partnerships. The fractal ability to build and stabilize within all TIMA SME perceptions, is the clue to revitalize local SMEs as the global short term match winner on the road to success of SMEs for an economic evolution. With individualized innovations and personalized services the digitized SME partnerships are very attractive for large global economic players within their competition barriers in increased complexity as lean Global Hyper Enterprises in all sectors.

In 2014 the mutual traditional paradigms on capital pillars between work and wealth face two opportunities to the better that are simply driver in a new age, with unlimited plurality and diversity in a convincing outperforming completeness of better living:

First the leadership for peoples better education is not only enriching the central complexity driven industrial strategies for products in structures of the past as pathway to better performance. But also with the opportunity for local desire driven participation in sharing the individual demand of local societies and markets,

outperforming the old system by better local economics and civilization progress in sustainability. All forms are measurable in decentralized affordable market flexibility with local robotics in SMEs and personalized services in customer designed value networks.

The skilled and sophisticated human to machine relations in SMEs partnerships especially match the extreme opportunities in low capital factor intensity with highest market flexibility benefiting TIMA work and wealth with outperforming in stable social market environments. The success story of SMEs in the reunited Germany is a proved global brand in a global trend to social market economies for the digital playing fields.

Second the digitalized globalization is heading for a post climate change economy with sharing value networks, that will enrich the tradition of the international work sharing establishment for products with lowest human and material factor intensity by the opportunity of independent sharing global downstream and upstream value creation with benefits and obligations in all nations to share local prosperity in wealth and work. The measurable digital evolution from Industry 3.0 to 4.0 as well as the manageable turn from Internet to IOT and G5 in personalized communication is already a measurable part of the markets in all regions of the world.

The pace driver of politics 2014 is positioning a country for best match winning opportunities, but the cyber age will show its game changing market forces influences. The primacy of politics understands the game changing potential in more than 140 Mio. family driven enterprises worldwide. 2014 they are very different individual SMEs. Already in 2020 within the IOT and 4.0 data exchange for local SME partnerships can stabilize and contribute directly to a sustainable economy, nationally, regionally and globally.

Netted shoulder to shoulder in SME partnerships with 10 UNGC principles and individual spirituality new value networks of partnerships and their potential to “CytoGrowth” are the most vanguard pillars for the TIMA Work+Wealth growth in cyber age strategies exchange in 2014 and beyond.

2014 TIMA explored the outcomes in SME partnership in various countries and in various sizes of value networks and value chains as well in asymmetric partnerships

in systems (SOEs), sizes, culture and market access of partner groups behind the local SME in partnership exchanges in HGEs, MNEs, TNEs and other SMEs.

In all digital driven partnerships, joint fractal framework agreements are the pillars to modernize and strengthen the SMEs partnerships and their business success factors, independent of the sector.

In the transformation to really unlimited growth and prosperity in the long run and the challenge of better living for all in the digitalized society, the global acceptance of the measurable sustainability factors aside to the three production factors is navigating in the post climate game change. This factor integrates people and planet in new rules of the game between the global societies and markets by new frameworks in world economics expected at least 2018 on climate change and WTO rules and will impacts to a complete new vision on regionalization, TPP, TTIP and all maritime and continental infrastructures in public and private business and all defense strategies in the decade ahead.

TIMA participates 2014 in the game changer strategies for this situation anticipating that the primacy of politics will enlarge the regulation and tax flow role of governments, sharing of more human sustainability responsibility and safety in all value networks with the private sector and benefit the capital role sharing monetary frameworks to drive the game change in the four factors on fast transformation in innovation, science and circular driven markets.

All TIMA core strategies and structures focus on SME partnerships to support and to realize the competitive economic deliveries of organic and inorganic substances as changer in material factors intensity per invested capital but also the economic competitive deliveries in live science, life style and living and housing as changer in human factors intensity. The TIMA strategies in monetizing and financing focus also on a change capital factor intensity for all, especially in circular economics for mining and extractive side and all energy intensive industries including nuclear fusion .

TIMA navigates strategies on the intensity change of all factors, with a sober regard on the factor for sustainability, playing in all investment-, business-, and policy briefings an important image role. In all climate preserving processings for stable relations in innovative products, in circular services and in sustainable trades. The customers decide in society to business and in market to business with their

satisfaction the entrepreneurial future as well as the design of the circular economy or innovations driven economy.

In all actual developments, TIMA shares strategies of SME partnerships and mark the key entrepreneurial game changers to new digital and automation impacts on the society, to capital solutions to technology and marketing disruption. The SME partnerships enjoy the opportunities of sharing risks in SMEs partnerships on millions of shoulders, the local flourishing of prosperity and the highest human integrity in social markets stability.

In fundamental large scale of industrial development the autonomous digitized SME partnerships carry a key global opportunity on the plurality and diversity with their value networks from customers desires to employees smart transmutation and smart skill in the shortest reaction times to science, market , society and peoples

The SME's a global pillar in societies

TIMA expects the strong economic drive for the game changing by the global super bowl formation of the west in stringent TPP and TTIP negotiations for all its participants in new partnership forms between 2015 - 2018. The key political drive to push the game changing matches, unfortunately the same narrow time slot to set the obligatory frames for global climate change new value creations and effectual maritime and continental human security improvements. The civil societies face the drive as responsible game changer and stakeholder in all uncertainties and possible failures in human safety and security and the capital market and wealth community face opponent drive of game changing in regionalization and by imponderability in cohesion fracture between diverse interests.

The strong distinction of TIMA strategies, to transform, to integrate and to build specific SME partnerships, is the most likely game changing success factor of the new paradigms, without to risk in enterprises and societies exploding or imploding loss of stability: The cross border digitized partnerships of millions of SMEs, family driven enterprise creating new pluralities in the diversities of individual enterprises in personalized market relations.

They all guard the global acceptance to operate and legal rules for their change in global local economics in plausible pathways to better living in freedom and peace. The TIMA strategy of SME partnerships at the bottom of the pyramid with business statesmanship in sustainability and individual spirituality for all is a commitment to the next generation.

The SME cross cultural integrity and individual spirituality

The individual spirituality (1) in the Christian Idea of Man with the human personality as “origin, medium and object” of all institutions and in all processing situations guides the caring for climate change and bio-diversity, against unidirectional escalating human interest, to balance in measurable sustainability for all (2/3) and to adjust the framework of living for the inter- generation fairness with the society promise of the social market objectives (4). The evolutionary transfer of social market processes in the digital global social cyber market for responsible work and wealth partnerships (5) includes the comprehensive sharing of entrepreneurial contributions in competence (6) for game changing innovations in the environment of human living, human safety and human security of all in the common spheres of influence in markets and societies (7/8). The framework of freedom, creativity and performance is part of the autonomous entrepreneurial responsibility and legitimated in the constitutional law of Germany.(9/10) (see chapter 2.21)

The Individual spirituality, permanent driver to integrity in culture of globalization, chapter 2.21 (1- 10)

2014 The individual spirituality a permanent driver to integrity in the culture of globalization.

“In the digital netted societies and markets within all value networks impacting to human living, human safety and human security the individual spirituality is a part of the human rights and of the human face in the environment of civilized developments creating more entrepreneurial responsibility for sustainability”. Dato’ Dr. Achim Deja President of TIMA International GMBH and DtMG e.V. New York UNGC Summit 2013, 20.September,

2.1 Strategic analysis and measurement

TIMA shares in his activities and services experience to bridge gaps in national and global standards of globalization in transparent processes within the frameworks of public license to operate by the 10 UNGC principles for sustainability.

2014 anticipating these new international frameworks of sustainability for globalization, TIMA is puzzling on individual global success factors for local strategies to change the game in a SME partnerships with local governmental digitized structures to create local and global competitive value networks with attractive wealth and tax development along the value chain for all at any place. In free public and private markets and societies TIMA is briefing and guiding politics and entrepreneurs to innovate their market flexibility to share digitized individual flexible market relations to customers, clients and all stake- and shareholders.

2014 TIMA delivers clear and explicit game changing strategies for optimized values creation per market for the financing of resource allocations in local sustainability. Digital structures give enterprises and game changer the opportunities to handle disruptive challenges in serious evolution strategies in digitized social market economics standards and the 10 UNGC principles.

All procedures of TIMA partnerships in value networks are transparent and follow individualized measurable success factors, to satisfy customers acting like entrepreneurs for the society or in the markets within their relations to business, in digitized services, manufacturing and commerce, or to the government according to established legal services and new digitized governmental processes, products and services.

2014 the society competence of TIMA was systematically expanded, shared and matched with political, entrepreneurial and civil international game changing institutions and UNGC marking issues for better living, more human safety and innovative security.

2014 the most prominent international echo as comprehensive driver in game changing approaches in policy briefing 2014 received Dr. Martina Timmermann TIMA VP International Affairs for her shared contribution of a long term performance model on peaceful and resilient international relations for the primacy of politics between governments published as fellow of the American Institute for Contemporary

German Studies and The John Hopkins University Washington D.C. in the 59 AICGS Policy Report to Tri-Regional Partnering on reconciliation in East Asia: Pivot to shaping the order of the twenty-first century? => see more TIMA UNGC Business for Peace B4P contributions 2014.

The origin of TIMA industrial business competence in strategic resource allocations for societies and markets emanated from managed game changing strategies for value creation in life science and health, in lifestyle, living and housing, in mobility, security and defense and energy intensive circular economies as nuclear and CO2 - industries since 1976 in high level management, boards and supervisory boards level of industrial responsibility to participative decentralized “gestion” on leadership in partnership in all operations with proved standards of social markets economy.

With the perception of change from the traditional entrepreneurial lead factors of success of the 90ties TIMA was a continuous part of the industrial development towards Industry 4.0. After transferring ICT from the old to the new economy in the beginning of the century, with the classic business to government (B2G), business to business (B2B), business to consumers (B2C) relations including logistics, the playing fields of TIMA sprawled beyond the classic influence sphere of enterprises.

The up to date structures of real time face to face (F2F) communications on internet or intranet and in clouds, and to-days applications driven marketing in the innovation economy are anticipating a future architecture of entrepreneurial services in public and private local and globalized environments, that will need more local business statesmanship within the primacy of politics.

TIMA GlobalCon, TIMA SustainMan, TIMA InNetMediation, TIMA Work+Wealth, TIMA CytoGrowth, TIMA-SME Statesmanship were UNGC principles based 6 doings of TIMA for building new partnerships with new business forms. Within TIMA strategies for clients TIMA guide and support to master the game changing in commercializing the flexibility of markets, and in technics to puzzle the decentralized complexity. With print to order, decentralized robotics and print to pack logistics the winning game changer are the competing entrepreneurs and their staffs in scilled crafts and trades, industrial, agricultural or scientific SMEs, MNEs, HGEs, in profit and nonprofit entities, in private or public state owned enterprises. The TIMA value network of partnerships manage the individual disruptive challenges within reliable

vanguard structures to better serve new demands from market forces and dissolve barriers of protectionism in all markets.

The SME partnerships expand their digitized SME services between the SME partners to focus and share sophisticated responsibility within the local society at any place, with advanced digital competition and affordable pricing, for local, national or regional environment as integrated partner of the prosperity for all

TIMA partnerships models are first quality driven, in order to contribute to business and society development in time and surpass with innovative digital structures the normal competition in market flexibility,

This drives measurably the globalized local upscaling with growth and prosperity. The staffs in the partnership match daily in real time the demanding markets and generate growing tax income in the local societies with social market performance, stabilizing all capital shifts in real wealth.

2014 TIMA also shared and matched with finance intermediates and customers the experience with digital expansion in netted Big data use and Internet of things shifting in serious gaming the customers position to a real disruptive demanding free market force as well as driving a new generation as demanding free society force.

This digital impacts on markets and societies are continuously reflected by TIMA individual shared briefings listening to powerful new collective think pattern in politics and markets often surpassing traditional institutional structures in flexibility, efficiency and speed distributing unreflected operational short notice contents.

The digital reengineering in SME partnerships must fit the state of the art in technical structures for entrepreneurial flexibility and security in communications and the rethinking of strategies should match the stability of an evolutionary development within sustainability progress in value networks and ethics of enterprise philosophy on social market economy 4.0 in individual spirituality to manage the game changing opportunities.

At any place the TIMA SME partnerships are economic game changer in terms of shrinking factor cost and exploding competitiveness in a social market digital economy to drive the corporate upscaling and wealth development in qualitative and quantitative growth. An idea Dr. v. Kuenheim realized already in the 70-90 of the last

century for the Family of Quandt within international work sharing and up-scaling of the BMW brand.

The key framework to stand head and shoulders of the rest in digitized quantitative and qualitative growth are the TIMA SME partnerships in work and wealth with such **first outcomes based** on the new digital relations of man to machines in governmental and legal climate digital rules.

Within the **qualitative part of** growth driven by humans in adequate decentralized high tech entities for individualized upstream strategies in short time distance to customers an increasing number of traditional maintenance, services, industry and trade professions create unlimited outstanding digitized ideas and innovations for local business. The **quantitative** growth in high tech automation driven by mass effects in downstream strategies is also directly connected to the affordable decentral use of robotics for such SME partnerships .

Both, humans and robots driven entities therefore share in integrated dispositioning the value networks of the SME partnerships and all success factors of innovations and cost factors of work.

The **second outcomes** are the new digital relations of work and wealth, being connected by the sustainability factor, with direct impacts on the benefits of markets and societies along with circular economics and new high end value networks for technologies and processes of outfitting-, construction- engineering, metallurgical-engineering, nuclear- and chemical engineering .

The **third outcomes** are based on the digitized understanding of wealth by stock exchange, financial intermediates and digital fiscal and regulative primacy of politics to shift capital in the upscaling of value networks with measurable sustainability as driver and accelerator in gilt edged investments for steady growth of wealth contributing to stability in social market 4.0 economics. In that relation digital SME partnership services create unlimited plurality in diversity for most attractive ROI in investments to all sectors.

2014 TIMA owner, board and supervisory council decided to focus the activities of all TIMA locations on this development, changing evolutionary also all necessary traditional structures for the upcoming decade to serve digitized growth in partnerships.

The 2014 TIMA digital SME autonomous partnership services for individualized transformation strategies answers to the latest consequences in the race on flexibility for the management of public and private entities to deliver customized guidelines for a zero time to market solution. In almost all playing fields the traditional rules of competition in market and society business relations will have to be replaced by the a game changer triggered with clients digital intervention in key sales structures of public and private products and services. TIMA guides with UNGC principles entrepreneurial impacts on attractive digital potentials inaugurated in strategies with digital monetizing, capitalizing, marketizing and commercializing for efficient and safe value creation, performance and integrity.

2014 TIMA further shared innovative structural integrating of the push force in actual society to business (S2B) or market to business (M2B) relations modernizing structures with sophisticated personalization in person to person (P2P) or machine to machine (Ro2Ro) relations. Both will drive broadband net capacities up for the Big Data volumes and 4G to high end new 5G technologies in IOT internet of things as driver in all communications.

With the 2014 TIMA approach, the evolution of new partnership forms in networks with platform providers will lift their comprehensive potentials in the innovation economy, but especially for digitized local SMEs autonomous partnerships. Game changers in robotics in SMEs are manifesting growth and added values in cross border partnerships to share successfully sustainability, human safety and security in a resilient social market architecture with wealth growth independent of interest rates by real value growing performance in a competitive global environment.

2014 in all regionalization frameworks as EU a single inhabitant (society) has increasingly measurable relations with home and various states entities (society) on education, fiscal issues, identity or travelling documents, with institutions on work, health, police, military, and further administrative and or bodies for water, waste, to mention just a few. These society to society relations are affected by “entrepreneurial” Customers of governmental products, services and processes, delivered by governmental entities, authorities or institutions municipal, federal or national level.

A focus on TIMA activities 2014 was to explore and share the digital perception of governmental primacy of politics in developments for partnership with strategies in

municipal administration regarding the key paradigm changes by a digitized society in legislative, executive and judiciary for parliamentary and administrative and justice. The horizontal transparency in legal competences of legislation, government, administration and jurisprudence within government bodies focus adequate functions and checks and balance/division of power in any nation and regionalization of the future. Most digitized processes start on the municipal administrations level, worldwide in continental and maritime centers caused by rapid emerging demands.

The digital society is as well as the digital market a key driver to position a nation and its population as a competitive national economy or within the regionalized identity building in a broader regional competition for better living. The process of global regionalization is advanced in Europe, US NAFTA, Asia, and ongoing in all other areas.

TIMA anticipates in the upcoming digitized decade the vanguard game change within the global terms of trade of imports and exports by business partnerships sharing value networks for local complementary and interpenetrative value creation on municipal level. The TIMA SME partnerships with TIMA SME Work and Wealth, TIMA SME CytoGrowth and TIMA SME Statesmanship are a flagship perception for local growth and better living for all and by far the most attractive increase in sophisticated employment and autonomous family driven enterprises lead at any place in transparent efficiency.

TIMA Strategies in 2014 for customers with clients in S2S - Society to Society Partnerships and S2B - Society to Business Partnerships:

2014 TIMA value propositions for S2S and S2B partnerships innovated, designed and shared visions in different game changing partnership strategies, to rething and reengineer the “public market” flexibility for the individual human being as customer and part of the free society in the position as customer of politics-, government- or justice partnerships in modern cameralistics. All have specific procedures as customers to private sector, e.g. MNE-, TNE- or local SME partnerships in their relations “society to business”.

Innovating, exploring and exchanging situations of customers of a SOE (state owned public enterprise) partnerships in a Society to Society relations, S2S, as well as customers of political institution partnerships or political administration partnerships

the understanding of the individual person as a free social market economy sovereign in his decisions and the SOEs as free governmental entities owned by the state and based on tax expenses, have a great potential to increase in each governmental environment worldwide the efficiency of governmental capacities in new partnerships with local drivers in creative value networks for circular and innovation economy growth with stable tax flow included.

Within a global approach of sustainability and with measurable contributions to the 10 UNGC principles, all SOE partnerships in digitized economics of IoT and big data 4.0 share their local success in partnerships, navigated by sophisticated governmental frameworks of legal regulation.

The German SMEs of private sector as driver for the digitized economics integrate SOEs in the digital SME partnerships creating new society to business relations with SOE as customer in shared value networks for public and private partnerships in new digitized societies and markets. The autonomous entrepreneurial lead in the framework of legal regulation lead to stable expansion of social markets 4.0 economy in Germany and is a case model for all.

These strategies contribute to the listening to the markets and the free market desires by an alliance of work and wealth in partnership under the primacy of politics to generate gilt-edged values as base of economic and household stability, human subsidiarity and human dispositive driver of change for better living and measurable sustainability with positive impacts on the magic square of any national economy.

2014 TIMA activities

We started in 2014 to share and discuss the acceptance of models on SME partnership trust building by transparency in daily, weekly, monthly and yearly digital communications on industrial new orders, revenues and profits, budgets as well as changes in the balance sheet, capital structure, wealth and liquidity on a real time base, especially for CytoGrowths impacts in the SME partnerships with SOEs and digital SME partnership services to navigate the SME partnerships in avant-garde digitized customer – entrepreneurial SME partnership relations as TIMA does in patients – doctor relations strategies of the future for best health care affordable to all.

2014 TIMA continued in this context to develop and share strategies and structures for S2S and S2B value propositions and game changing partnership forms, to modernize public and private hospitals, approved and fitting European social markets economics and quality standards.

2014 TIMA activities with UNGC issues:

- In Vietnam the TIMA negotiated 2014 a value proposition for a modernization strategy with logistics innovations pulling a coherent way for globalizing competitive national health care systems and entrepreneurial partnerships in a sustainable network of nationwide health centers and hubs for the regionalization in North East Asia.
- With the Vietnam government we shared 2014 the most vanguard autonomous green hospital logistics for flexible personalized doctor – patients relations in netted health care structures of hospitals for inclusive, exclusive and affordable access of all to innovative lifes science, pharmaceutical and medical technics processes and digitized technology for biomedical developments within partnership networks and comprehensive framework agreements.
- In Africa 2014 an integrated local green health center combined with a school and aqua farming business envisioning an autonomous SME partnership model for better living in a remote small city by a local initiative in work, health and education, matching the SDGs post 15 goals in partnerships accelerating the commercialization with first steps toward GCF and partnerships for successful local farming, hospital and school building with safe services and business were started to share and exchange with UN entities included.
- In Malaysia 2014 we shared and discussed the SME partnerships opportunities using regional legislation of regulatory services and arbitration and tax incentives impacts in partnerships with state owned enterprises in specific B4P SME partnerships for health care in the public sector in remote areas.
- In Europe, Brussels, London and Berlin 2014 TIMA propositions on regionalized new digital and communication strategies for SME partnerships with SOEs were shared to accelerate the commercialization of start ups on association level. We exchanged in cohesive playing fields of Down Stream/Up Stream strategies how autonomous partnerships benefits in public

science driven business by innovative opportunities. TIMA expanded the entrepreneurial playing field for bio economy start up force in Germany to Europe and AEC within sustainability and integrity rules.

- 2014 the partnership fields of TIMA on SOEs and SMEs in science intensity and innovation intensity driven reforms in agriculture, chemical industry, trade, services, maritime and continental logistics shows high performance potentials in digitized vertical and horizontal strategies for all sizes of enterprises widening the gaps for subsidiaries in all regional and global safety and security processes on content applications and in an autonomous entrepreneurial access to the free market forces in a vibrant sustainability frame for better living.
- Optimizing the management by open connectivity platforms and value networks for modern IoT digitized partnerships in individual environments becomes a most serious carrier for the 10 UNGC principals to benefit all but also the most serious driver to game change in SOEs - SME partnerships to establish the use of digitized structure in commercialistic accountancy like the private sector in digitized monetization, capitalization, commercialization and marketization.
- The digitizing of all political spheres of influence, the comprehensive collective think patterns on traditional or adequate functional and political obligations in democratic processes, in global communications and big data exchange in security, science and socio-economics raise democratic challenges in all procedures of parliaments and legislation, of independent justice and judicative and governmental administration and the executive. governmental connecting digitized SOE enterprises to stock exchange expectations was 2014 a playing field for SME partnerships in TIMA international sharing and exchanging explorations.

TIMA 2014 anticipates the starting of the digitized processes in all guilds and family owned enterprises, between 2016 - 2018 with increasing interest in individual digital partnership strategies in Germany and abroad for innovation economy participation and circular economy responsibility.

TIMA Strategies in 2014 with our clients in M2B – Markets to business, by guidance of entrepreneurs in innovative SME partnerships in value networks .

2014 TIMA value propositions for M2B innovated, designed and shared visions in different game changing SME partnership strategies , to rethink and reengineer the market flexibility for the individual human being as customer of public and private entities as well as of political institutions understanding the individual person as a free social market economy sovereign in his decisions and the SMEs as free autonomous entrepreneurial entities, exploring SME partnerships as superior structure to customers in digitized markets :

2014 TIMA activities

- TIMA continued rethinking of M2B for UNGC summits in 2014 to share reengineered individualized client – entrepreneurial relations fitting netted digital globalization applications and digital subsidiarity. This relation faces disruptive game changers for governments, finance intermediates, companies and the civil society to deliver as transparent service entrepreneurs to the people as market designer whether as stakeholder or as ordering customer within all governmental regulations in issues of WEP, B4P, B4E, C4C, GCF, - their contribution to the society and markets in sustainable human safety and security in an architecture of approved free social markets economics of innovation.
- The TIMA vision for a partnership frame, to materialize the innovation economy as driver for social market modernization was updated and shared 2014. Together with UNGC based measurable sustainability the individual spirituality and cultural integrity was integrated in the TIMA proposition for a globalized public license to operate, protecting SMEs and balancing HGEs..
- 2014 - 3 additional global materials of TIMA to build and promote autonomous SME partnerships were developed and shared within the TIMA management networks, in international connectivity and in personalized content exchange. First binding guidelines for such TIMA entrepreneurial relations in regionalized economies as EU, Northern America, and the emerging markets of AEC Asia, Americas, Near East, AU, Eurasian Union, were started. TIMA explored entrepreneurial services to peoples as local market forces in partnerships and value networks for more market flexibility at any place for the future.

- TIMA promoted and guided 2014 in Malaysia the regular exchange and sharing on M2B TIMA strategies for entrepreneurial Downstream and Up Stream partnerships with MIDA/MATRADE and BioTechCorp for innovative industrial services between Malaysian Government ETP and GTP programs and German enterprises in all sectors of bio-economy.
- In a partnership with DtMG e.V 2014 TIMA sustained successful contributions to the Malaysian government analyzing benefits in sharing strategies for partnerships and game changing in European and Asian environments of numerous entrepreneurial options on agricultural products, consumer goods, industrial services , chemical processes, steel and alumina technologies, heavy industry engineering, machinery modernization , services in electronics and medical technics for the future to initiate case studies for SME opportunities .
- All TIMA automation M2B analysis are tailored in individual situations for measurable benefits in families driven partnerships between national SME/MNE and MNE. The expanding of individual entrepreneurial flexibility and game changing by TIMA partnership forms for local market migration effects, home and abroad, gains increasing partnership added values for shareholder and stakeholder interests. The TIMA perception on digital merging in real value networks with compliments of capital market investments, results in lower capital intensity, lower material intensity and lower human intensity per € investment with very attractive marks on ROI / total capacity compared to traditional complexity. The sustainability factor outcome in personalized value networks to design hidden champions is even greater by local partnership networks impact.
- TIMA recommends and is prepared for this entrepreneurial innovations anticipating 2016 signed forms of TTIP and TPP as driver for of social market performance in digitized globalization for all projected German enterprises partnership with family driven SME in adequate strategies and vibrant new partnership contributions to the UNGC principals at any place.

2014 TIMA anticipates the SME partnerships to become a remarkable driver seat for infrastructural policy strategies of governmental cooperation and development between ministries in addition to legal obligations of societies to UN SDGs

TIMA SME Strategies in 2014 with clients in B4P – Business for Peace UNGC

The international SME Partnership building is a TIMA Flagship of to-morrow to develop strategies and structures for vanguard SME value network of digitized SME business for local growth, employment, performance and sustainability to benefit society and market with prosperous perceptions on work and wealth by SME partnerships.

Based on the highlight of the New York UN GC Leaders' Summit 2013, the launching ceremony of the Business for Peace (B4P) initiative with TIMA as one of the first two German signatories, TIMA International joined this important initiative and decided to contribute with a comprehensive society and market paper a new policies approach for a peaceful human safety and security pathways. Within the new paradigms in digital societies with value networks in netted economies in the decade ahead a resilient strategy was developed by Dr. Martina Timmermann for a Tri-regional Partnering perception on reconciliation and innovation in East Asia, pivotal to shaping the order of the twenty-first Century and exemplary at any place for cities and SME's in partnerships.

2014 activities

- 2014 the fundamental frameworks for this initiative started, managed and designed by the Dr. Martina Timmermann, TIMA Vice President for International Affairs.

Based on her continuously globally shared and exchanged professional experiences on old and new visions of the past and the future, in peoples reactions in powerful collective think pattern, within her remarkable international networks with Universities, think tanks, politics and corporate sector in Europe, Asia, Amerika and Afrika in problematic and safe environments, she managed to extract decisive proved experiences of German society and business sector since the end of world war II, the society integration between Germany East and West, the participation in a transnational Eurozone and the expanding of Europe 28, NATO beside the internatoinal worksharing within the regionalization and institutionalization of the societies in Asia.

Within global politics, with politics of reconciliation and the new challenges of digital globalizationher contribution is a standard on opportunities for policy

briefings to perform with business statesmanship within the primacy of politics..

- As fellow of the American Institute for Contemporary German Studies, the John Hopkins University in Washington DC, Dr. Martina Timmermann published her final studies on a new frameworks sharing potentials and options from EU/Germany for mediating in East Asia.
- Within the vanguard strategies development of TIMA since 1996, this paper for partnerships, anticipating fundamental strategic paradigms in an architecture of the future, within multilateralism in global frameworks of digital netted value networks of industry, trade and services, is a new landmark of TIMA policy briefing solutions to support business ventures and political projects where integrity, transparency and ethics are vital for success.
- Within cities SME partnerships in cross border political subsidiarity are a driver to bridge national and local primacy of politics, international capital shift of hope, public license to operate with entrepreneurial lead as a serious approach in B4P and a vibrant the role for global SMEs partnerships in the innovation driven economics of IOT. Business presence in fragile societies is a key to economic growth, development and often the stabilizer to prevent conflicts.

2.2 Materiality of TIMA SME partnerships in Sustainability (UNGC)

The TIMA views on essential impacts in our business and in the services for our clients.

The digital TIMA SME partnership value networks for intra and extra digitized relations of SME partnerships globalization from Germany to the world and the world to Germany is built with individual rights protection in swarm enterprise environments as in partnerships for global SME CytoGrowth protection, at any place for the SMEs in partnerships:

2014 TIMA SME partnerships exploring opportunities

Connecting specialist personnel, suppliers, core companies to build, optimize provide, specialize the IT-based communications with individual partnership between German family enterprises and family enterprises in all continental industrial belt, road and rail areas in asian/african – european geologic boundary or maritime

oriented industrial harbor gates worldwide or global industrial aerodrome parks, sharing in public or private entrepreneurial responsibility their infrastructures of work and their risks in wealth with digitized measurable sustainability and integrity of individual spirituality within the primacy of politics.

TIMA SME partnership model guarantees the free and autonomous entrepreneurial independency in digitized SME Partnerships by law, the 10 UNGC principles and the individual spirituality obligatory for all.

The digitized frame of each SME partnerships value network around the world delivers the transparency in flows of legal, financial, commercial and technical processes for all participants in the SME partnerships by the SME partnership network services, which is owned and supervised by all SME owners in assets by their own foundation, acting as contract partner to standard platform and IoT provider globally. Furthermore this in house services are the only clearing body to CythGrowth revenues and the intra guide for all SMEs in new digitizing processes and all new individual property rights for the partnerships relations worldwide.

The intra guides enable the SME's diversity and plurality of the digital SME value networks services in multiple structures for work include focused education and research for each SME partnerships excellence in protected intellectual personalized properties, in individual digital economics of manufacturing, trading or services, for larger employment and steady growth in the region, in individual SME partnership brands of individual profiles of SME partnership for digitized value creation in competitive OEM-, systems-, components-, modules-, parts-, spare parts-, recycling-, materials-, outfitter-, automation-, robotics-, construction- and maintenance services.

The SME partnership value networks drive to innovative high end markets and integrate branding, certification, pricing and paying and robotics and transmutation in digitized standards and digitized sustainability in simply superior local economics to all, ever realized.

With transparent relations to all local primacy of politics the promotion for industry, research education in private and public interests is a part of the safe digital social market economy game changing.

Stakeholder meetings, IT connectivity logistics and cross enterprise works open gates to global content sharing in research, technical domains leadership, education

along all SME partnership value networks in customer to society or markets relations, for clean SME statesmanship in sustainability in the SME partnerships value networks worldwide

2014 TIMA activities

Observance of the law and the legal system is a fundamental principle for our Company in fitting the sustainability standards, rules and principles within the TIMA code of conduct. Every employee shall obey the laws and regulations of the legal systems within which they are acting. Violating the law must be avoided under all circumstances, especially violations punishable by jail, monetary penalties, or fines.

Regardless of the sanctions foreseen by the law, any employee guilty of a violation will be liable to disciplinary consequences because of the violation of his/her employment duties.

2014 Strategic allocations of resources in partnerships are selected and determined by volume of value in networks by markets, resources on finance, materials and humans for relevant sustainability lead in competition, allocation to take the lead in hidden championship position is key of intellectual learning curve and guided by standards to communicate on progress.

2014 TIMA dynamic sustainability strategies are based on hands on staff participation in game changing patterns, zero time market in innovations and new enterprise positioning with society license. In partnerships all share responsibilities in dispositive factors, integration of all stakeholders, as drivers of execution on all market desires. In the entrepreneurial masterplan the pathway to growth, performance and employment is conceptually manifested with interdependency to markets, climate, society and capital volatilities. With basic and hands on efficiency the SME and family enterprises realize in partnerships the permanent matching of virtual plan and real doings on the pathway of prosperity sharing in partnerships for the better.

2014 TIMA was honored to share the partnership experience with the UN Secretary-General at the UN Private Sector Forum 2013 for Africa. With entrepreneurs and political leaders from the African Union, the UN Global Compact and its UNGC African Network and the African Development Bank at the table. 2014 TIMA continued exchange on specifically African issues related to the entrepreneurial

environment in the sectors of mining, raw materials trading, energy mix, and engineering services. As a result, Dr. Achim Deja, President of TIMA shared possible partnership issues from engineering offices to reinsurer to evaluate the TIMA innovation driven industrial and civil strategies of social market paradigms and SME contributions in partnerships, following UNGC principles.

With strategies for SME Partnerships within continental and maritime based forms of infrastructures TIMA created 2014 real options for pathways on SME Partnerships in B4P and shared this options in Europe on continental and maritime market and society strategies to business in regional infrastructure modernization in “road, rail and belt” or “ship and connect”, from China to Europe and from India and South East Asia to Africa and Europe, and from Europe to polar regions and Asia and USA, as well as ship and connect Caribbean and Latin America.

2014 TIMA SME strategies or structures on sustainability in Mega-cities, states, and corporations were shared with Caribbean and Latin American participants of the Global Compact City Program.

On a meeting of high level 2014 in Asia, Saigon, TIMA learned and shared with a prominent HGE about their measurable mastering sustainability with SMEs in their value network partnerships turnover of actual 1\$ per human being on earth per day, heading for 10 \$ per human being on earth per day in 2025 with a demographic forecast of 8 billion peoples, leading the competition race on connectivity and content digitalization for personalized communication technology and the presence in every spot on earth. This is a serious game changer in the validation of the TIMA service strategies for SMEs partnerships.

2014 TIMA SME strategies on B4P in Africa and India, on lowering carbon emissions, on woman empowerment, on food, water, waste, on labor, on corporate water stewardship and Post 2015 SDGs were discussed with the corporate sector, international foundations, issue specific UN organizations and UN GC initiatives at the UN GC Leaders' Summit in New York and on Sustania summit in Copenhagen, Europe. Such expert exchanges allowed us to successfully empower and provide a synthesis of alternatives for all our clientele with reliable strategies for SMEs for balanced partnering with other SMEs or with international leveled MNE players or with global leveled HGEs.(Hyper Global Enterprises)

In 2014, TIMA International shared its diverse entrepreneurial dynamic sustainability partnership forms in digital netted globalization of markets and societies. For fitting the framework of The 10 UNGC sustainability principles, we exchanged the impacts of TIMA autonomous SME partnership strategies with leading personalities on the 6 key TIMA pillars for resource allocations in the next future:

- about local public and private market flexibility needs and contributions of SMEs in cross border decentralized entrepreneurial complexity benefitting reliably global financial drivers for unlimited growth in high competitive innovation driven structures by value networks of SME partnerships between family enterprises now for the future, with 20 Mio. SMEs in Europe in the focus of such sophisticated partnerships.
- about primacy of politics presettings caused by climate change and WHO rules, changing mobility and defense architectures for globally netting communities in maritime and continental environments with individual global logistics and value network services of local SME partnerships for manufacturing, and trade, in cities within industrial belts of road and rail or of large harbours/ports and ocean carriers connecting national economies. 140 Mio. SMEs are in the focus of such partnerships worldwide.
- about efficient up scaling of women entrepreneurial empowerment beyond contributions in circles of think tanks and political institutions, with equality architectures in international SMEs partnerships of the future, matching talent and gender development of 20 Mio. women in European SMEs, and 3 Mio. in German SMEs.
- about reconciliation of interest and cross border security in architectures of family SME partnerships with science, infrastructure, legislation and identity building contributing to local acceleration of innovation economics by SME value networks in the digital future. In 28 European states the partnership momentum seem to be unlimited, exceeding 1 tr. € in terms of trade, impacting more than 500 Mio. human beings in an European minded culture.
- about massive contributions of identified or created new transparent champions in SME partnership value networks in globalization, that evolutionary changes the access to global wealth community networks of pension funds, foundations and financial intermediates, Shifting capital in outperforming sustainable structures for the better individual cross cultural

living in the next generation and driving civilized globalization processes of the future a sustainably impacting to generate the increase of the average income in emerging and emerged countries by 200 billion € in adequate increases in enterprise SME partnerships at any place

- about the individual spirituality in digital SME partnerships relations the positive identity and integrity building and contribution to balancing negatives influences in all cross cultural impacts on SME partnerships and their value networks are remarkable. Within local environments such SME partnerships stabilizing sustainability and create a solid access to the public license to operate in game changing disruptions. All professional interests in work and wealth were matched by measurable sustainability and individual spirituality by less risks and in responsibility strengthening the partnerships in difficult situations by a local SME statesmanship.

This inspires the most SME partnership drivers in game changing markets of 2 bil. people with engaged and enabled stakeholders, shouldered in 140 - 200 millions of SMEs exploring, learning, sharing and exchanging skill and knowledge with others in digitizes forms of serious gaming, managing to raise their own new partnership bars within the UNGC principles and individual spirituality, to benefit from real value creation in transparency for a better living in work and wealth.

2014 of TIMA SME partnerships and foundations

The growing population in digital netted global society is inspired from the coherent dream of game changing for a better living in post climate change of inclusive growth. This desire envisions a driving momentum that advances equitable opportunities for economic participants during economic growth with benefits incurred by every section of society. The 10 UNGC principles are part of an architecture to safe this momentum in intergenerational obligations of society development within the governance of sustainability. In most societies the family and entrepreneurial relations belong to the most cohesive forces between human beings in SME partnerships.

From the base of the pyramid to the top of the pyramid family enterprises are worldwide the elementary carrier and best game changer of work in emerging and emerged societies to manage challenges and stabilize developments in handling disruptive changes.

TIMA empowers these abilities in strategies and with digital structures of 4.0 and IOT services for autonomous families enterprises partnerships of all sizes in cross global at least dual local value networks for success by better ownership advantages, location benefits and globalization incentives with investments to new services to markets and society. This is attractive to specific investment views of wealth management, especially in high-risk investments.

The TIMA perception on digitized SME partnerships in Work+Wealth strategies rethink and reengineer in all countries or regions as NAFTA, EU, AEC/ASEAN, AU the market and society demand to settle a new pathway to prosperity, on an individual and personalized Kingsway with SMEs in partnerships as well as in HGEs in the decades ahead.

2014 TIMA activities:

2014 TIMA reengineered strategies of serious game changing with measurable contributions of German and northern European social market society pillars, fitting the performance of digital business economics .

2014 we checked with monetizing, capitalizing, marketizing and commercializing unprecedented advantages for digitized SME partnerships, as their owners are market drivers merging digitally all local, regional and global success factors within fractal forms of dispositive principles of autonomous individuality, personality and subsidiarity.

The entrepreneurial autonomous access to free market forces and the sustainable solidarity in all SME environments, goads individual enterprises value networks to deliver local exclusiveness, affordability and inclusiveness.

This key marks the transformation to sustainability with the netted stakeholders and shareholders sharing in frameworks of education, infrastructures, and adequate local tax income giving the primacy of local politics the chance to build the better city with fused inclusiveness. This will be a focus of SDGs with more than 100 bil. \$ per year of the international community by the same fractal approach.

In addition, the global circular economy approach for TIMA SME partnership strategies, deliver game changers in all continents and perceptions to redesign and revitalize capital intensive, energy intensive, quality intensive and science intensive

industrial brands, designed, manufactured and delivered with close relations to high temperature, high pressure and high energy and high weight processes in new partnerships. The rethinking of the traditional heavy industry is highly attractive in global new partnerships spending in real value investments just 10 % of the new value creation for game changing partnership on tr.€ level from mining to steel or alumina etc.

The TIMA approach in the global innovation economy for unlimited real value growth with the TIMA digitized SME partnerships, captivated by unprecedented human – robot relations, decreasing intensity of all production factor costs in downstream technology for local automation and high end local product performing. By transmuting the digitized desires of digitally enabled customers, with hologram, virtualization, simulation into real product, trade and service offers and deliveries, a zero time to market flexibility at any place is part of technical and communications application and use of IoT and industrial 4.0 or G5 for local SME partnerships. In this sophisticated and smart approach with digitized SME partnerships, locally every human being is an entrepreneurial customer in the digital society and the digital markets in his digital relation to enterprises or governments. The economic effect is an superior competitiveness of all local SMEs in partnerships in outstanding sustainability.

2014 TIMA SME partnerships for GCF Financing SDG post 15 in Africa

2014 The African vision of financing the TIMA International partnerships of SMEs following the UNGC discussion on GCF and others

For continental logistics of high speed in autonomous systems for basic cross border AU infrastructures from Africa to Europe, India and South East Asia. The connected economic gravities of industrial zones and cities crossing the continent of Africa, design and boost the inner African trade and commerce, vitalizing family enterprises partnership building as drivers of local diversity in actions for more than 3 bn. peoples as consumers.

TIMA recommends the industrial consortia to be led with experience and to build thousands of smart European Asian African and American industrial, engineering and service partnerships netted with digital infrastructures high market flexibility and low

complexity for modernization of Africa in mining, raw material and energy systems or vanguard industrial and agricultural large scale growth aside the industrialization.

Such social market economic frameworks let post 15 SDGs shine and would also place emphasis on B4E investments in health and educational structures for better living and inclusiveness. Driving a key finance approach of TIMA social market strategies, the long term financed modernization with both, high efficiency of industrial down streaming output and extreme use for own Up Stream Investments, with measurable effects on short-term decrease of capital intensity and costs, easing all investments on higher added-value pay-offs.

TIMA shared in UNGC the estimated \$1,000 billion to be needed to be invested annually in the project developing climate-friendly industrial infrastructure including renewable energy production by cross continental and cultural consortia, within an AU leadership in partnership reuniting the primacy of politics and interests in a framework of integrity between South Asia (India), South East Asia, (ASEAN). Near East (Turkey, Iran, Arabia) and Europe in ending the maritime dependency of the whole region for a new beginning with human safety and security for a prosperous future.

Financing Africa with the Green Climate Fund (GCF) , or by a comparable international capital market shift of hope raising \$100 billion p.a. by 2018 are sufficient to make 1.000 billion (or bitcoin) \$ Investment profitable . The TIMA game changer concept for Africa is safe, because it follows best German experience as similar game changer in the 70ties with real value creation through the German-Sowjet Union Mannesmann Plant engineering business for modern efficient down streaming investment in raw material production and distribution impacting high competitiveness in German products. With international financing and best up streaming framework the strategy delivered profitable high end products additionally.

The TIMA strategy of innovation economy in partnerships for shared financing and clear entrepreneurial leadership in partnership is unique and avoids to be disbursed for the 100 billion dollars of the GCF from tax, semipublic institutions or central banks which have a high risk potential to run short or create liquidity in buying bonds. The model of an intermediate green climate fund selling green climate bonds therefore could be the best alternative for combined regulation with concrete entrepreneurial investments. All monetary policies of government benefit as only real value creation

is financed, especially if the bonds have a duration of hundred years with rather low interest rates and the additional effect to increase the profitability of already existing financed adaptation and mitigation measures, as earlier proposed in UNGC Cancun Summit by Deutsch Banker Koch-Weser. For inclusive measures, excluded from private sector the blank risks to finance 100 billion per year would need 20 billion dollar of FED and ECB related to GDP. In the Eurozone only 1.5 billion \$ per month for financing local improvements to stabil growth sources. The real value creating SME partnerships development in local activities could be matched with 20 mio SMEs in Europe, many experiences in Africa as well as with African inhabitants in Europe to build up sustainable structure in local African SME partnerships.

2014 of TIMA SME Partnerships in TTIP/TPP and C4C

TIMA collected and shared all over 2014 the positive movements in 2014 for SME partnerships of family enterprises with 10 UNGC sustainability principles:

This TIMA strategies 2014 based on UNGC principles and German social market experiences, matches with an innovation economy of partnerships in Europe, Asia, Americas and Africa. This is a reliable pathway to prosperity within one generation to foster and realize local prosperity in civilized family driven globalization in a sustainable future till 2050, which contributes sustainability to limit global warming below 2°C, if global primacy of politics and capital market actions are taken before 2018 and respect embedding human continental and maritime safety and security.

TIMA SME partnerships, mandating strategic relations vice versa between families entrepreneurs, European SME with entrepreneurs of families in SMEs of Near East, Africa, AEC plus, USA, Middle and South America.

The TTIP and TPP frameworks, forecasted to be solved in 2015 and beyond for the Atlantic and Pacific regions ease legal reliability, open big data exchange to generate IOT based local wealth development for SMEs in Family enterprise partnerships.

The TIMA perception 2014 on this issue is basic positive because of the vanguard individual human benefits and we anticipate the necessary political multilateral frameworks of WTO, G7/8 – G20 within 2016-2018 with volatile global impacts in various regionalization developments and global imponderabilities on safety and security interests.

TIMA SME partnerships are corner stones to serious game changers for digitalized circular and innovation economy, as measureable force in diversity and plurality for free and better living of the people, attracting free market forces and primacy of local politics, confirmed 2014 in numerous governmental discussions with delegates and leading politicians from all over Asian countries. Even though the IoT will be driven by the broader aspects to monetization, capitalization and commercialization by measurable customers new interactions giving local presence new forms of billing, and SME partnerships a good positioning in special relations by better forecasts, better personalized customer informations with impacts on innovations and balance sheet elements, that have a direct correlation to stock-exchange spheres of influence. Especially in complex industrial environments as well in wholesale environment the targeting in business lines is much more effective with increasingly stimulating decentral SME partnerships with high benefits for all. Also the mixture of automated solutions and needs of fitting in zero time presence realizes maintenance improvements, easily steered to all SME services and their recurring local financial issues, again with effects on balance sheets and the stock exchange evaluation of good performing business. SME partnerships become game changing drivers of partnerships for the the benefit of their clients, The very old rule to know more about a clients improves the business, becomes professionalized by IOT, especially if the SME strategy is matching these informations with profitable revenues in pricing and costs. The Kingsway to sustainability is sharing in a larger perception of strategies, the core services of TIMA International with digital SME partnerships services in upcoming environment of TTIP and TPP for all involved.

2014 TIMA activities

The 2014 proposition of a digital TIMA SME model is a real time society platform for individual success, societies stability and market growth with professional TIMA SME partnership strategies for all “road, rail and belt” or “ship and connect” value networks around the world.

Already in 2010 in Cacun, Mexico on UNGC C4C Summit TIMA drove and intensified the exchange and the promoting on maritime “ship and connect” and continental “rail and belt” (silkroad) solutions for measurable frames in quality and innovations in hidden champions strategies within UNGC sustainability rules in the “super bowl” the

largest and most intensive and extensive market frame of the world, 2014 expected to be regulated by public law 2015 -17 for both TPP and TTIP.

The actual TIMA value network partnerships models surpass any traditional enterprises in short notice transforming best success factors in zero time to new local markets. The cross nations families in local partnerships speed up the market migration pace in benefits procession of digitalization, skill exchange, smart business communication and sustainability performance.

Fast growing hidden champions network partnerships are winners within the key paradigms to come with TTIP and TPP in the decade ahead.

2014 of TIMA SME partnerships in global family enterprises

2014 the negotiations on global climate change challenge after a decade on warming, are expected in C4C to come to an end in 2015 -2018, with exceptional options for SME partnership with local governmental legal frames. The WTO negotiators 2014 for multilateral solutions becomes more optimistic by the acceptance of multilateral rules beyond 2016, as regionalization in all continents create more risks than chances in short term views. The raise of USA as energy mix game changer 2014 for the Atlantic and Pacific region becomes an influential part of the maritime and global security for TPP and TTIP, with growing expectations on opportunities for European – Asian – American perceptions. TIMA forced 2014 in regular exchanges in Brussels, New York, London and Berlin in UNGC related sharing and learning lessons, a new legal and financial environment globally, especially to protect local digital SMEs partnerships for manufacturing, trade and services to reengineer the new free access to the markets.

2014 TIMA contributed with entrepreneurial partnership opportunities of education to the change of wealth and capital flow and its paradigms within a volatile financial global framework, favoring the SMEs partnerships in TIMA work+wealth and TIMA SME statesmanship in globalizing economies in their emerging industrial belt zones and in national aspects to strengthen with specific commercial options the future in industrial down streaming and local SME up streaming strategies, dislocating historic sinecures and inequities in societies and markets in all economies.

2014 TIMA exchanged and shared on the applications of the digital evolution in industries and in communication between individuals, to empower the new approach

of families in SME partnerships with personalized and individualized local market flexibility within stable and transparent financial opportunities for the SMEs and their brilliant outlook in serious partnership wealth development.

The likelihood to local SMEs successfully revitalizing their own base of the pyramid environment by TIMA SME Partnerships is high in free social market driven frameworks, but need political and legal stability in non-democratic states. Therefore TIMA 2014 was initiating autonomous entrepreneurial partnerships guided by international monitoring.

The TIMA 2014 reviews the factors of success for SME Partnerships decrease in those states continuously with creeping or openly radical loss of rule of law, increasing corruption and security. In all such regions or playing fields, maritime or continental oriented, troublesome impacts cause measurably sparking dissatisfaction.

The increasing human refugee flows and associated criminal impacts are a measurable outcome of an increasing competition on influence by interests in human, material and financial flows on globe, actual in 2014 there are more than 150 Mio. refugees in foreign countries with rising pressure on Europe and all family driven enterprises hesitate with international partnerships in such environments.

TIMA 2014 partnership models are part of opportunities for a game change in inclusive growth and help to turn around to local prosperity by work and building wealth. The increasing influences of extremes implode all bottom up opportunities for better living in families connected in across borders partnerships. With a measurable autonomous entrepreneurial individual game change and a protective governmental legal subsidiarity frame by the local level of government only some aspects can be solved:

- The growing volume of inclusiveness worldwide 2014 and the difficulties to establish a reliable framework for financing SDGs Sustainable Development goals for post 15, find a stable pillar in TIMA SMEs partnerships as international financed game changer and market driver. Families wealth interests need a clear capital and finance flow regulation respecting their autonomy in their properties as well as all involved financial intermediates to realize opportunities in partnerships. The European central bank offers capital market conditions for long term perceptions and politics are under pressure to

build the regulations frameworks including human safety and security in partnerships

- The ranking of the big points to prioritize differ 2014 from region to region and country to country but are vitally impacting everybody in the netted world of more than 7 billion human beings 2014 and growing by nearly 80 Million humans every year.
- The international community 2014 still has no joint cohesion for a human driven global architecture for the future and still compete on retrospective central or capital leadership roles of a past history.

2014 TIMA SME partnerships in EU zone

In the controversial views in Europe on economics driver the countries are risking a massive drifting away of interests between of the states of EU for standalone solutions in rising nationalism.

The driver for the better is a superior EU strategy within an responsible innovation driven IOT economy embedded in 4.0 abilities. Promoting the expansion of dispositive human factor and up scaling of more than 20 Mio. family driven SMEs in Europe to 30 Mio. SMEs for employment and partnerships in the globalization within a European legal framework of business with better performance is the measurable business answer for sustainability, human safety and security of EU as a whole, based on European values of social market economics as people driven democracy.

This is the time for national primacy of politics to serve the people of Europe with top down and bottom up harmony in EU, delivering the society framework with reliable and affordable health-, education- and social systems, defense, science, foreign affairs and cultural integrity but European spirituality.

2014 TIMA promoted in all national and international networks as Sustainia, UNGC that Europe is a advanced global authentic force in in the world for free and social digital market architectures of the future.

TIMA shared therefore the SME partnership in all European nations, especially Germany as driver to share this in a democratic balanced and stipulated free individual driven society with leadership in partnership preparing the entrepreneurial forces for a post climate change order, as soon as possible already 70 years after world war II, the end of colonialism and already 24 years after the end of a global

human lives impacting reality with central ideology above law of the individual human rights.

The economics of a peaceful prosperity in the future are built on the fundamentals of sustainability in the 10 UNGC Principle, because of the self-evident broadening of entrepreneurial leadership in partnership by the autonomous private sector and individual wealth development with innovative science and societies benefits in evolutionary effects to grow in plurality and diversity benefitting all.

Responsible political regulation in value driven philosophy, human vision and with individual wealth responsibility as integrating digital game changer beyond classic collective think pattern as “fraternité, égalité and liberté” in modern political orders of digital social market economy will turn around the spreading and disruptive increase of tensions, misused regionalization for national interests by participation and focusing the society on maturity and self reliant citizens within the societies and markets for better living of families and the generations to come.

in unlimited prosperity and high performing revitalization of unity in plurality by disciplined and humble political leadership in partnership, starting with sophisticated education for all in digitized world of real value creation by work and wealth in direct partnerships

2014 all political and administrative strategies for the global idea of man, in an architecture of better living in the future named as key tools the security and prosperity in and between all parts of the societies avoiding rising diffused volatility and incertitude. Most societies are not prepared to game changing influences from inside or outside, but ignore realities, interests or underestimate that the serious will for integration must be measurable and transparent for all .

With this fractal framework of SME partnerships the broad and highly specialized skill and knowledge transfer is broken down to its elementary mosaic of updated wisdom and education for economic use and the creation of employment, income, entrepreneurial profit, Return of Investments and tax contributions in the local areas of doings worldwide. It is the driver for society developments, for capital shift of hope, for large scale industries and global trade.

The building of partnerships for real value creation need to start on the bottom of the pyramid without corruption, in economic performance reached with sustainable

measures, delivering quality safety and financial reliability in adequate SME partnerships as game changer.

2014 TIMA activities

2014 TIMA shared on SME partnerships in Europe within the rules of social market driven subsidiarity, dispositive human abilities, sustainability principles and individual spirituality to deliver the basics for a convincing offer in an architecture of UNGC sustainability of the future.

2014 TIMA SME partnerships in German social market economy

Established in 1996 for Change management issues as transformation and integration management agency 18 years of TIMA best practice in game changing and personalizing of human-to-human relations is manifested in guiding, exchanging and sharing with entrepreneurs, employees and all private and public share- and stakeholders, as well the institutional bodies of corresponding societies and markets.

Our key message of is to strengthen the human strength and dispositive factor in enterprises to increase the ability to innovative progress raising the plurality and diversity with local market flexibility in partnerships and shared intellectual properties. Upscaling the autonomous entrepreneurial participation in digitized corporate partnerships and the building of globalized SME value networks is the most convincing investment. Sharing fair and intergenerational equity principle, with adequate employment strategies the SME partnerships generate identification with skilled and high sophisticated digital markets in cross border local relations of the future.

Implementing serious gaming solutions in the partnerships the visual learning and communications beyond any language match globally industry 4.0 and IoT market demand between all human beings and robots with local inclusion and completeness through SME partnerships.

The human face of the digital globalization is a measurable public obligation for the primacy of politics to globally harmonize legislation frameworks for local work and wealth within the digital 4.0 and IoT as the Kingsway to ecological cyber social market economics on local level in all societies and markets.

A worldwide local autonomous entrepreneurial responsibility of SME partnerships and statesmanship are unbridled 4.0 cyber-economic drivers in a free society evolution. In personalized integrity at any level and individual spirituality in SME partnerships the growth rate for better living from the bottom to the top of the pyramid at any society is the most reasonable opportunity to build the new digital age 4.0.

The actual level of 3.0 industrial version and actual internet versions will not fit a global market competitiveness of fast changing economies, none contribute to the protection of a growing human society within an obligatory post climate change architecture nor strengthen all worldwide family driven SMEs. Missing the individual SME partnership opportunities to intensify capacity building in skill and education, missing the connectivity with science and technology and the direct local access to own intellectual properties creation in smart, human led – machine to machine centers of to-morrow, the existing top down structures are the highest barriers in heads and markets as well as in the governmental administration.

2014 in all globally balanced digitized human safety and security policies governments are facing necessary digital top down regulations and autonomous bottom up cross corporate responsible guiding. The autonomous entrepreneurial responsibilities locally in the new digital global pathway to prosperity in individual SME partnerships in any national, regionalized and global market migration is the greatest opportunity for better local living worldwide and an issue of materiality to the UN and UNGC.

The TIMA model of SME partnerships, sharing the digitized sustainability factor is our contribution as participant of UNGC and we want to share, exchange and guide with international enterprises the work and wealth development, within peaceful global societies and markets relations, embedded in the 10 UNGC principles and our individual spirituality as European citizens

We estimate that centralized governmental structures as well as centralized economic structures may cause the national economies fall back in their competitiveness perception because of structural barriers against the autonomous sharing in digital factor intensities even in very large scale lean standardization in traditional global leadership visions, The political and economic impacts on their national magic square may increase poverty and threaten the international security

frame with hateful collective think patterns in the social media and political scene to change momentum on the cost of third parties.

The northern European social market economies and their approach to a people driven globalization is remarkably experienced to share in decentralized and balanced political and industrial structures the digitized sustainability factor cost intensity for all. This is anticipated in the TIMA digitized individual SME partnerships models that sharing of sustainability in the 10 UNGC principles becomes a part of a peoples driven modern sharing in a social market 4.0 in IOT of Europe for local globalization worldwide.

2014 the leading industries and governments in west and east, north and south drive the pace to a digital ecological cyber social market 4.0 and IoT to participate in global competitiveness, the key door opener for an reasonable capital shift of hope.

The evolutionary TIMA preposition proposal is based on the measurable success of the “German Soziales Marktwirtschaft”, implemented after the World War II by Konrad Adenauer and the Allied Forces. With a re-thought and re-engineered strategy and structure TIMA anticipated, shared, exchanged and transferred in UNGC level and many best practices the German approach for a legal European social cyber market economy frame to enable the explosion of value creation by local SME partnerships in all continents. These SME Partnerships as innovative driver for plurality in diversity generate highest probability to realize global and local intergenerational justice, individual human personality building, human employment, human safety in quality and human security. This TIMA strategy and structure is benefitting all operational free society and free market interests with an autonomous entrepreneurial responsibility for the value networks of SME partnerships and statesmanship.

Within a local vanguard primacy of politics we share on digitized opportunities in all cities worldwide, with an anticipated open European hybrid connectivity platform for BIG Data 4.0 and IOT shared contents, in the UNGC global sustainability architecture and by the individual spirituality expressed in the free will of all heavenly bodies, for living as free peoples in free cities and free societies globally.

2014 TIMA SME partnerships and cyber - inclusiveness, completeness

The entrepreneurial partnership for sustainable value networks are the key game changer for markets and societies. On the pathway to a new architecture of the future in the digital global society, SME partnerships mark a Kingsway for societies with family driven partnerships

The game changer in the tradition of standalone leadership is to manage digital netted wealth in autonomous partnerships in leadership, creating unlimited plurality in diversities in all societies and can be measurably understood as successful swarm economics by all. Smart Partnerships in digital value networks must therefore realize vanguard breakthroughs in various playing fields: - realizing consumers market flexibility , personalizing innovations in patients – doctor relations, individualizing local automation for industrial complexity, generating sophisticated services in cities in individual circular economy and any remote places, to benefiting all in private and professional participation by more plurality in diversity in lifestyle, life science and infrastructural common goods. Therefore the human approach to receive high end transmutation services of their digitized desires as customers to politics or entrepreneurs need the utilization of digital visualization and simulation in 3d hologram technologies to create digitized parts for robotizing or other forms to offer and deliver products, trade or services in the new relation of customers to enterprises in markets or customers to government administration and politics in the societies.

2014 the procedures of TIMA shared and explored the inspiring confidence in the digital implementation of smart high tech services in the TIMA SMEs partnerships, to merger the bottom of the pyramid with the top of the pyramid in all societies with UNGC principles for all, and individual spirituality, according to an architecture all want.

The 6 procedures developed by TIMA for SME partnerships became the pillars of the TIMA entrepreneurial strategy profile in society and market relations within the framework of the 10 UNGC principles. integrity and individual spirituality.

2009: TIMA GlobalCon – to build the way; 2010: TIMA SustainMan – to do it better; 2011: TIMA InNetMediaton – to guide the best; 2012:TIMA Work and Wealth – to create sustainable prosperity; 2013: TIMA CytoGrowth – to multiply the innovations;

2014: TIMA SME Statemanship – to share the game change, serving markets and society and safe entrepreneurial intellectual properties.

2.3 International standards on sustainability

TIMA shares the goals of sustainability in strategic, structural and operations in 6 procedures as a framework in which the individual development and the realization in or with partnerships is master planned for operations in a joint process with wealth, owners and employment.

TIMA is committed to one world of the human civilization, sharing the dignity of man is inviolable by all and the duty of all public and private authority is to respect and protect it in its sphere of influence.

TIMA is UNGC committed to sustainability, to civil liberty, the dignity of personality, rule of law and due process, dynamics of work, responsible innovative capacity of wealth, preparedness for reform to renew, to stabilize, to normalize.

TIMA strategies are committed to individual spirituality, leaps in evolution, levelheaded participation and sharing.

2014 TIMA - UN Leadership and Global Compact Activities

The TIMA has continuously championed the Global Compact in the business sector worldwide and broadened the TIMA business partnership models in meaningful ways and respect according to the 10 UNGC principles and all UNGC communications on progress in business issues. TIMA shared the expectations of global compact Lead and the GCF approach to finance adaptation and mitigation for Low carbon society. TIMA exchanged business and shared the investors views on post-2015 SDGs in New York, and learned and exchanged integrity aspects in global value chains for human safety with the Global Movement of the Moderates.

TIMA guided and shared since many years clients and TIMA business in best practice with individual spirituality in traditional business partnerships in intercultural and interreligious peace and business solution respecting the holy see views as well of Lutheran churches on international level for implemented business integrity with European ethic levels of EBEN and DNWE or OECD principles for MNEs.

In all impacts the open hands-on SMEs partnerships remain as a fundamental part of stability in all societies.

2014 TIMA shared and exchanged structural contributions for partnerships in UNGC principles of sustainability and integrity, leading to economic progress and TIMA participated in the private sector forum in New York on climate change and business and investment Forum to position the role of SMEs as a game changer of everything.

2014 TIMA shared within the value network the UNGC women empowerment principles

Tima kept sharing and stayed continuously connected in exchange and personal contacts in all UNGC issues of mega cities, water mandate, caring for climate and the UN corporate sustainability Forum. The sharing of specific women value networks for innovation economy and women in tech and a key role for SME partnership were developed and exchanged worldwide with TIMA perceptions on women future in social markets 4.0 in international relations and Dr. Martina Timmermann as driver in TIMA WEP activities 2014..

Regarding the 2nd International Conferences on “Women Empowerment Principles” in cooperation with UN Global Compact and UN Women, 3-4th of April, 2011, Ankara, Turkey, the BPW-Turkey and the 1st International Conferences on “Women Empowerment in South Eastern Europe” in cooperation of Hellenic UNESCO and UNESCO Center for Peace and Women, 2011, 5th of April, Ankara, Turkey and the 3rd Event for Women's Empowerment Principles (WEPs), 31st October 2012, İstanbul. in all policies, was mainly the push to re-engineer and design first women value creating strategies for natural medicine and cosmetics in Malaysia or coffee trading with Vietnam and laboratory and science bridging with earth to mouth for female game changer in Singapore and Indonesia. Women in international Logistics and value networks in all critical B4P areas are of great importance for UNGC WEP networks.

The International Conference through the collaborative efforts of the local networks of UN Global Compact (Turkey, Gulf Countries and Iraq), April 2013, İstanbul, BPW-Turkey and 1st İstanbul Women Entrepreneurs Conference and B to B Meeting, 4th of April 2014, İstanbul demonstrate the digital impact on flexibility and communication

intensity with innovative female tourism approaches and another view on hotel hospitality and urban citizenship.

With power, success and prosperity contributions in ideas by and for Women, creating a new europe initiative, 6-9 of November 2014 Regensburg, Germany, by BPW Germany and BPW Danube Net Businesswomen Forum and the 2nd İstanbul Women Entrepreneurs Conference, 14th of November 2014, İstanbul Yeditepe University matched digital connectivity and contents with real time value network for multiple value creation structures and strategies specifically for women as global patients transfer.

We shared 2014 in modern medical technics on 3D based digital augmented evolution in patients treatments in breakthroughs of red, green and white bio-economy and free female capacity building with serious games visualisations to support the women leaders of the future, 12-14 of December 2014 in Talinn, Estonia.

2014 TIMA signatory - The 10 UN Global Compact Principles

The Global Compact asks companies to embrace, support and enact a set of core values within their sphere of influence in the areas of human rights, labor standards, the environment and anti-corruption.

Human Rights – TIMA is UNGC signatory for WEP Women empowering

Principle 1 : Businesses should support and respect the protection of internationally proclaimed human rights; and

Principle 2 : make sure that they are not complicit in human rights abuses.

Labour Standards – TIMA is UNGC signatory for B4P Business for Peace

Principle 3 : Businesses should uphold the freedom of association and the effective recognition of the right to collective bargaining;

Principle 4 : the elimination of all forms of forced and compulsory labour;

Principle 5 : the effective abolition of child labour; and

Principle 6 : the elimination of discrimination in respect of employment and occupation.

Environment – TIMA is UNGC Signatory for Climate Change and Water Mandate

Principle 7 : Businesses should support a precautionary approach to environmental challenges;

Principle 8 : undertake initiatives to promote greater environmental responsibility;

Principle 9 : encourage the development and diffusion of environmentally friendly technologies.

Anti-Corruption – TIMA is UNGC signatory of Shanghai Declaration

Principle 10: Businesses should work against corruption in all its forms, including extortion and bribery.

2014 TIMA strategies and structures integrated all 10 UNGC principles in SME partnerships.

2014 the UNGC companies guidelines were updated for the fair playing fields for measurable corporate sustainability, in the game changing management and employment pathways and in the role of Lead responsibility, sharing with the Global Compact principles in digital environments.

In order to share SME partnership and to deliver SMEs strategies in all societies in an adequate level for their playing fields for their further participation in models of digital globalization opportunities in their society and markets, all discussions of the past approaches were rethought and replaced by resilient fitting increasing digital market game changer of the future.

TIMA is driver of initiatives as WEP Women's Empowering Principles. For guidance on gender equality and children's rights, reference can be shared on the Women's Empowerment Principles and the Children's Rights and Business Principles

For further information on UN-Business partnership models, including multi-stakeholder partnerships, see the Chapter Four of UN-Business Partnerships Handbook Handbook.

2014 TIMA guiding UN and UN Global Compact

The strategies and structures of TIMA for clients in society or market playing fields include the guidelines on a principle based approach to United Nations and the UNGC principles worldwide, within TIMA international partnership forms fitting in social market economics and legal international frames.

Over the past years TIMA and other stakeholders become active in achieving goals, as a complement to primacy of politics of national Government action.

The value networks of partnerships in TIMA initiatives and strategies contribute to responsible and inclusive business in generating employment and wealth in SMEs through local services, production and trade, sharing in partnership key resources of knowledge, expertise, additional financing, market access and committ all relevant partners with business' responsibility to respect UN universal principles.

2014 the international community of UNGC has welcomed and encouraged TIMA business partnerships contribution in the United Nations conferences and summits

and their reviews in the economic, social, environmental and related fields, as post 2015 sustainable development goals.

2014 the TIMA commitments followed the UN guidelines first issued in 2000, revised and reissued in 2009. The overarching principle is that collaboration between the TIMA and United Nations Global Compact will not impose undue rigidity in partnership agreements while always serving the purposes and principles embodied in the Charter of the United Nations and always being undertaken in a manner that maintains and promotes the integrity, impartiality and independence of the UNGC and UN preventing and mitigating potential risks of adverse impacts on people and the environment. Nothing in these guidelines is intended to modify or otherwise change any existing obligation under any relevant rule or regulation.

All co-operations between the United Nations and the TIMA business partnerships are principle-based. These principles are included in the United Nations Global Compact and the United Nations Guiding Principles on Business and Human Rights. The United Nations Global Compact provides an overall value framework for cooperation with the TIMA and the TIMA business partnerships. The principles of the Global Compact on human rights, labour, the environment and anti-corruption are based on intergovernmental agreements and are specifically relevant for business. Similarly, the United Nations Guiding Principles on Business and Human Rights, which have been unanimously endorsed by the Human Rights Council, serve as the baseline reference point for expected business conduct, and as a benchmark for responsible business implementation.

2014 TIMA guidelines for TIMA – UN partnerships models

All partnerships between the business sector to share or take part in the TIMA partnership strategies were designed and developed within UNGC 10 Principles.

Within the frame of UN guidance, TIMA recommends a best practice approach.

All global implementations of structures for partnerships focus on outcomes. Establishing platforms comprising numerous representatives from all relevant sectors to create frameworks for action that address global challenges and allow for local implementation in public health care systems..

Within local implementation of partnerships the execution of humanitarian or development projects share in particular specific issues in areas or regions. They are often accompanied by encouraging changes in behavior of local target groups in deforestation and tropical rainforests.

Corporate responsibility initiatives concentrate on changing business behavior, for example, through leveraging their commitments to a specific development cause or fostering the self-regulation of a specific sector in circular industrial services.

Advocacy campaigns encourage behavioral changes of target groups to alleviate development problems. Desired changes can range from sensitizing individuals to certain issues to encouraging individuals to engage in problem solving on nutrition food safety from earth to mouth.

Resource mobilization partnerships focus exclusively on engaging companies to provide resources or to mobilize external resources to enable UN entities to better fulfill their mandates in disaster preparedness

Innovation partnerships enable outcomes. They utilize the expertise of business partners to develop and implement innovative products and services that can, for example, improve work processes within UN entities in digital network development.

TIMA – UN partnerships are based on adequate resources and developed policy frameworks and institutional capacities needed for engagement in a mutually beneficial way. In particular to build adequate institutional competencies, including focal points, to promote transparency, learning and knowledge exchange in sharing platforms as UNGC.

TIMA guidance to digitalized sustainability

All signed rules, principles, codices and the TIMA code of conduct guidelines are deliberate key game changer for the role of our behavior in digital society and markets in all our digital entrepreneurial doings, anticipating a framework for international separation of powers and public licence to operate within a rule based architecture for all.

To a substantial degree, the image of TIMA is determined by our actions and by the way each and every one of us presents and conducts himself/herself. Inappropriate behavior on the part of even a single employee can cause the Company

considerable damage. Every employee should be concerned with the good reputation of TIMA in each country. In all aspects of performing his/her job, every employee must focus on maintaining the good reputation of, and respect for, the Company.

We respect the personal dignity, privacy, and personal rights of every individual. We work together with women and men of various nationalities, cultures, religions, and races. We tolerate no discrimination and no harassment or offence, be it sexual or otherwise personal.

We are open and honest and stand by our responsibility. We are reliable partners who make no promises we cannot keep in the real, virtual and cyber world of digital communication. These principles shall apply to both, internal cooperation and conduct towards external partners.

2014 TIMA services on UNGC principles for sustainable economic

Tima is a steady cumulative and integrating learning curve service. In 2014 we continued in learning, sharing and exchanging with partners on international business in work and wealth sustainability developments for our clients. The influence on economic paradigm changes in regionalization and institutionalization correspond with strong national and cross national identity building politics . According to the high importance to manifest sustainability to face the climate change as cohesive force for unlimited growth for all in the post climate change economy, the 10 UNGC principles are driver for a peaceful rule based global order.

In this field 2014 TIMA shared and explored the attraction on wealth driven digital SME partnership with digital knowledge exchange with transparent unlimited market access for innovation and circular economy in new monetizing stimulation for SME partnerships in all continents.

2014 the inevitably growing of climate change influences on the economic adaptation and society mitigation also triggers the political competition about the best post climate change economy for global politics and the most safe and fast channels of commerce on continental and maritime passageways for national and regionalized pathways towards prosperity.

This is 2014 in line with cumulated experiences in households globally with the Post Colonial economy after the World War II or the Post Socialism economy 25 years ago. With the Post Climate Change digital new economy more than 90 % of the worldwide living overwhelming young generations of under 25 years expect game changing opportunities accelerating in their families a better wealth and work environment.

2014 TIMA shared and exchanged on strategies focused on short, medium and long term investments in global infrastructures connecting via air, land and sea North Amerika, Russia, China, North East Asia, Eastern Europe, Central Asia, Near East Central Europe, South East Asia, India, Africa and EU in game changing playing fields for vibrant new value networks. TIMA transparently shares with the responsible investment of wealth and entrepreneurial sobriety of work new strategies and structures in cyber based partnerships and developed the “TIMA CytoGrowth” agenda within “TIMA SME Statesmanship” for cities, belts, air- and seaports.

Innovative opportunities directly rupture politics driven national taxation interests to impact, participate and supervise regionalizing and globalizing game changing of real flows of commodities for digitalized human society, human safety and human security in a rules based approach to an global architecture all want.

Therefore 2014 TIMA exchanged views, initiated and discussed new partnership forms to serve human beings to realize up scaling growth of clean and green economy within international cyber based standards in post climate change framework to outperform in new complexity forms mining, extractive industries, energy mix, materials, heavy industries and industrial plant engineering and construction, for society safety and in defense responsibility, with an public, work and wealth license to operate in globalization.

The first TIMA UNGC initiative of sustainability in social market economy, brought to public on Copenhagen Summit and at the Sustania events in Rio+20 and Copenhagen, TIMA has updated 2014 within the upcoming cyber based economy the TIMA UNGC sustainability commitment to be expanded for new social cyber market economics frame as part of the 10 UNGC principles within a legal framework for the digital society and market.

In 2014 TIMA continued in value networks strategies to exchange and explore approaches to partnerships on individualized game changer on capital intensive, logistics intensive, energy intensive, quality intensive, science intensive, innovation intensive and communication intensive sectors of society to reduce the risk barriers in all markets within multilateral enterprise codex of OECD within multilateral rules of WTO and UNGC principles .

For a transforming pathway in digital connectivity, contents, mediation and structural empowering, TIMA guided in mandated forms clients in sustainable partnerships to share new playing fields. With regulators of governments, state owned entity leaders, with owners of enterprises in all industrial sector and industrial services, logistics and trading partners we explored and shared various game changer for markets and societies within and for public and private issues.

2.3 TIMA Value Networks in international Standards

The importance of sustainability in the output of value creation of TIMA is an essential part of the value chain in partnership and value network with partnerships for our business integrity.

TIMA UN –UNGCGuiding Principles on Business and Human Rights

The key Guiding Principles were developed by the Special Representative of the UN Secretary-General for Business and Human Rights, Professor John Ruggie, over the six years of his UN mandate from 2005 to 2011 and shared by TIMA. They elaborate on the three pillars of the UN "Protect, Respect and Remedy" Framework that Prof. Ruggie proposed to the Human Rights Council in 2008.

This framework becomes a part of the invisible cords of mutual understanding for the spirits in our procedures in all TIMA partnership relations. The full text of the Guiding Principles is complemented by additional commentaries providing additional guidance and TIMA was sharing the procedures from 2006 - 2011 attending meetings in Genf, Paris and New York.:

Ruggie Guiding Principles – Business & Human Rights Resource.pdf

www.tilj.org/content/journal/48/num1/Blitt33.pdf

The United Nations Guiding Principles on Business and Human Rights (UNGPs) are a global standard for preventing and addressing the risk of adverse impacts on human rights linked to business activity. On June 16, 2011, the United Nations Human Rights Council unanimously endorsed the Guiding Principles for Business and Human Rights, making the framework the first corporate human rights responsibility initiative to be endorsed by the United Nations.

The UN encompass three pillars outlining how states and businesses should implement the framework, within the state duty to protect human rights, the corporate responsibility to respect human rights and with the access to remedy for victims of business-related abuses

The UN have received wide support from states, civil society organizations, and the private sector. The "Ruggie Principles" or the "Ruggie Framework" due to their authorship by John Ruggie, who conceived them and led the process for their consultation and implementation, are to-day a part of the 10 principles of the UN Global Compact..

TIMA SME value networks and human rights commitments

TIMA Partnerships of business enterprises respect human rights. The responsibility of TIMA partnerships refers to internationally recognized human rights—expressed in the International Bill of Human Rights and the principles concerning fundamental rights set out in the International Labor Organization's Declaration on Fundamental Principles and Rights at Work.

TIMA partnerships avoid causing or contributing to adverse human rights impacts through their own activities, and address such impacts when they occur and seek to prevent or mitigate impacts of adverse human rights that are directly linked to their

operations, products or services by their business relationships, even if they have not contributed to those impacts.

The responsibility of TIMA partnerships business enterprises to respect human rights applies to all enterprises regardless of their size, sector, operational context, ownership and structure. Nevertheless, the scale and complexity of the means through which enterprises meet that responsibility may vary according to these factors and with the severity of the enterprise's adverse human rights impacts.

TIMA designs internal and external policies and policy briefings and processes appropriate to size and circumstances, including the spirit of their responsibility to respect human rights, to identify, prevent, mitigate and account for how partnerships address their impacts on human rights and to enable the remediation of any adverse human rights impacts they cause or contribute to.

The TIMA expresses the responsibility to respect human rights, through the TIMA code of conduct, published on our home page and approved at senior level of TIMA. In regular information our relevant internal and/or external partnerships receive our COP and TIMA stipulates our human rights expectations of personnel business partners and other parties directly linked to its operations, products or services. TIMA integrates the human rights in our value networks policies and procedures for strategies and structures with access to all.

TIMA value networks and ILO – Labor standards

TIMA shaped, profiled and regraded the TIMA line between 1996 and 2014 from an agency for the development of a company to a business game changer of sustainability in partnerships for digital markets and societies matching innovation and circular driven economy of globalization.

TIMA fulfills all legal standards In real and cyber networks with offices in Tokyo Japan, Berlin Germany and the innovation and strategy center in Wachtberg, Germany our actions follow the national laws for business partners services and chartered accountant and office of tax accounts.

Within clients relations in strategies and partnerships TIMA recommends partners and clients to follow the ILO comprehensive system of instruments on work and social policy, backed by a supervisory system designed to address all sorts of

problems in their application at the national level. Since 20 years TIMA has adjusted in manufacturing, services and trading playing fields the international labor standards in projects with clients aimed at promoting opportunities for women and men to obtain decent and productive work, in conditions of freedom, equity, security and dignity often in enterprise own value chains of international work sharing. In today's globalized business, the TIMA international with UNGC and ILO based labor standards are an essential component in our relations to clients and fit the international framework for ensuring that our strategies contribute to the growth of the global and local economy and provides benefits to all.

In the cyber- economy structures of IoT business relations real time virtual situations with undisclosed realities, non-transparent deliveries with missing cross corporate responsibility happen in supply chains with complex ownership procedures. This is replaced by digitized transparency of TIMA Work+Wealth in TIMA SME partnerships with permanent digital improvements in monitoring, measurements for efficiency, digitized skill, knowledge, research and quality to empower the sustainability factor to increase with measurable outcome for all.

2014 TIMA SME CytoGrowth in ILO Conventions and Recommendations

In TIMA guiding services international labor standards are legal instruments drawn up by the ILO's constituents (governments, employers and workers) and setting out basic principles and rights at work within the TIMA SME structures and strategies in local business. They are either conventions, which are legally binding international treaties that may be ratified by member states, or recommendations, which serve as non-binding guidelines for all local SME Partnerships.

2014 TIMA SME CytoGrowth in ILO fundamental conventions

The ILO's Governing Body has identified eight conventions as "fundamental" principles also covered in the ILO's Declaration on Fundamental Principles and Rights at Work (1998). In 1995, the ILO launched a campaign to achieve universal ratification of these eight conventions. Till today this is an ongoing process in different countries and issues amounting to more than 1000 ratifications open in 2014. Even though much more is already achieved to ease the entrepreneurial responsibilities locally:

Freedom of Association and Protection of the Right to Organise Convention, 1948 (No. 87), Right to Organise and Collective Bargaining Convention, 1949 (No. 98), Forced Labour Convention, 1930 (No. 29), Abolition of Forced Labour Convention, 1957 (No. 105), Minimum Age Convention, 1973 (No. 138), Worst Forms of Child Labour Convention, 1999 (No. 182), Equal Remuneration Convention, 1951 (No. 100), Discrimination (Employment and Occupation) Convention, 1958 (No. 111)

2014 TIMA CytoGrowth in ILO Governance conventions

2014 the TIMA SME CytoGrowth partnerships in cross border value creating networks accelerate the local plurality and diversity exchanging and sharing added values in services, products and processes with knowledge and skill transfer scaling up plurality and diversity within the complete SME value network. In order to maintain and attract social cyber market solution for sustainability, the sharing option with the ILO's Governing Body in cyber based labor law is self-evident, for the human benefits within the 10 UNGC principles and all SDGs post 15 ahead.

The ILO's Governing Body has designated another four conventions as "priority" instruments, to encourage member states to ratify them because of their importance for the functioning of the international labour standards system. Since 2008, these conventions are now referred to as Governance conventions as they were identified by the ILO Declaration on Social Justice for a Fair Globalization as standards in Labour Inspection Convention, 1947 (No. 81), Employment Policy Convention, 1964 (No. 122), Labour Inspection (Agriculture) Convention, 1969 (No. 129), Tripartite Consultation (International Labour Standards) Convention, 1976 (No. 144)

TIMA as a developer of vanguard SME structural and strategic anticipation of IoT and industry 4.0 with a human face of successful business in a specific concept on the future economy within the 10 UNGC principles being shared and exchanged in the upcoming age with ILO best practice in fundamental and governance conventions in international strategies and partnerships. TIMA is willing to intensify the exchange on new processes to accelerate the regulations and standards of ILO for cyber based labor relations and rights on city level for local SMEs.

TIMA Value networks DCGK German Corporate Governance Kodex, vers 2014

www.dcgk.de/.../kodex/archiv.html?.../kodex/

TIMA services in strategy innovations started with mutual understanding of the DCGK in 2003 and participated in the changing frameworks with the actual version 2014. In 2015 TIMA will replace the DCGK 2014 by the 2015 form. Our TIMA strategy matrix and structure puzzling for the international playing field for value networks of SME partnerships ranging from small and medium enterprises up to HGEs is UNGC matured in German and European spirits grown up and embedded. .

The “Code” of German Governance is respected abroad and base of all essential statutory regulations of TIMA mandates in partnerships with German enterprises. Containing internationally and nationally recognized standards for good and responsible governance, they are in line with the UNGC sustainability rules. The clarifying on the obligations of Management Board and Supervisory Board ensures all concerned parties in the continued existence of the enterprise and its sustainable creation of value in conformity with the principles of the social market economy.

TIMA Value networks OECD principles MNE, vers 2011 ff.

www.oecd.org/corporate/mne/48808708.pdf

2014 TIMA SME partnership strategy is matching with the sustainability rules the OECD Guidelines and contributes to coherent globalization base of the pyramid policy responses realizing employment and inclusive growth. Within the sustainability rules of the UNGC , ILO labor standard and OECD guideline TIMA delivers and shares in all frameworks the robust fractal pillars for better work+wealth in globalization.

TIMA supports the OECD's goal, in reengineering our client's strategies since 2004 in UNGC principles, to give guidance on ways to create more resilient and adaptable labor markets and jobs, within the context of the over-riding goal of enhancing productivity.

Further exchange and sharing of TIMA is ongoing with BIAC, USCIB for cumulative TIMA SME partnership learning and sharing in different environments.

TIMA Value networks GRI / EFFAS

<https://www.globalreporting.org/.../G3.1-Guidelines-Incl-Technical-Protocol..>

TIMA SME strategies recommend “GRI sustainability reporting as proved practice of measuring, disclosing, and being accountable to internal and external stakeholders

for organizational performance towards the goal of sustainable development. 'Sustainability reporting' is a broad term considered synonymous with others used to describe reporting on economic, environmental, and social impacts (e.g., triple bottom line, corporate responsibility reporting, etc.). A sustainability report should provide a balanced and reasonable representation of the sustainability performance of a reporting organization – including both positive and negative contributions". Actualized SRG 3.1/ UNGC

The TIMA adoption of GRI Reporting Framework is part of TIMA participation in UNGC Principles since 2006 and perpetually shared for the framework of reporting on TIMA organization's economic, environmental, and social performance. TIMA organization is a strategic think tank of SME size, independent from projects with multinational clients and global locations. TIMA takes into account the considerations of small enterprises to those clients with extensive and geographically dispersed operations and a wider range of stakeholders around the world, to be generally applicable for reporting an organization's sustainability performance, as our core business is to be a game changer to the better performing sustainability in our clients value network.

2014 Reporting Strategy and Profile

In the creation of a value network for clients we puzzle the integral of added contributions along the value chain and their risks. In the TIMA SME partnerships we are focused to decrease the intensity of risks within the UNGC principles .

This impacts strategies with various factor intensities for goals in partnerships and the intensity of risks of sustainability in digital SME partnerships were minimized by master planned efficiency or structurally replaced to zero. Such game changer roles fits for unlimited growth as well as for up scaling sustainability with public acceptance. This is the base for the TIMA profile to share accumulated learning curves in partnerships, to decreases continuously all risks of sustainability, reducing economic factor intensity but increases the innovative special know how intensity of SME partnerships for flexible market and individualized society demand. The sharing role of TIMA guidance eases the in net mediation for the employed teams in SME partnerships.

2014 Reporting Management Approach

TIMA structures head for zero time to market and zero risk of sustainability within the technological progress in the next years till 2020 to protect and enlarge with TIMA services the value networks of clients in sustainability performance and CytoGrowth of their companies, for their employment and for the goods of the society. TIMA SME statesmanship in cross border digital partnerships supports local primacy of politics and strengthens the subsidiarity on cities level in politics with business integrity on cyber based social market SME statesmanship by the 10 UNGC principles.

2014 Reporting on Performance Indicators:

2014 TIMA final strategy puzzling for client with government in Vietnam on UNGC level

2014 Result ready to sign framework agreement fitting UNGC principles and responsible investments for a complex issue with high political stakes in economic, environmental and social facts and figures.

TIMA social market health centre strategy, to monetize and capitalize investments in expanding health care system for multiple green hospitals with a Public Private Partnership cooperation, respecting permanent primacy of politics, within periodically contracted autonomous entrepreneurial lead, and a regulating government, in structures of vanguard patient - doctor and care relations, IOT netted structures and worldwide logistics value networks, to create operational deficit free hospital or health centers. Within the principles of subsidiarity in partnerships of Aesculapian bound decentralized hospitals, with local impact on the matrix of local scientific innovation and locally integrated entrepreneurial medical skill and education new game changer drive affordable health care for all, proved in Germany for European and emerging market solutions.

2014 TIMA / DtMGe.V.(both UNGC) German – Malaysian strategy puzzle of TIMA to match the communities of Bio-economy in Germany and Malaysia to build entrepreneurial partnerships in a hub in South East Asia with scientific webinar bridge for intensifying a highly innovative playing field UNGC principles and GMM rules in the serious game changing of integrated cross border Bio-economy development.

2014 a skill and knowledge cooperation, industrial exchanging and academic sharing documents of a leading European chemical association were signed and cross European borders webinars realized, first partnerships established and additional countries involved.

2014 TIMA roadshow exploring on partnerships was reengineered and the rethinking process to sustainability in attractive partnerships covered 2014 and will last for 2016 because partnerships are increasingly influenced by innovations, technical evolutions in netted structures and cyber based applications.

2014 TIMA guidance in manufacturing, infrastructure and trade resulted from the key role of SME partnerships as bottom up top down support on investments within the cooperation of Asian primacy of politics in various ASEAN states were exchanged on efficiency and autonomous outcome of sharing.

TIMA Value networks - Impacts in Societies and markets

The local SME partnerships for better living are essential for all SMEs , embedded in subsidiarity solutions of primacy of politics and as a game changer for new organization forms of MNEs and especially as driver for bundling in trade and services with HGEs (Hyper Global Enterprises with more than 1 Mio. employees) a game changer for complexity management and a real challenge for all centralized SOE structures .

The TIMA SME partnerships strategies and structures are feasible in all existing and in all planned free social cyber market economy developments worldwide including SDGpost 15.

To underline the importance of the digital architecture in sustainability the Sustainability factor in SME partnerships worldwide follow the same procedure in the TIMA SME sustainability portfolio sharing the implementation in zero time to decision and in real time to game changing by the autonomous local entrepreneurial SME partnerships.

2014-2015 Rethinking portfolio on sustainability

Society (new ext. digitized stakeholder) vs. Market (new intern. digitized Stakeholder) to digital SMEs Partnerships :

Capital factor intensity measures - enterprise and management

2014 High importance - Enterprise and management measures

- Platform communication, bid data and provider connectivity – legal relations, licenses

- Digitizing competence for customers transmutation in SME partnership services – services in financial, economic and technical navigating and all owner issues services
- Governance / strategic playing fields and game changer solution for opportunities in SME partnerships
- Gender equality, equality of opportunity, equal opportunities of women, equal opportunity for employees in cultural diversity,
- Cross cultural competence in partnerships
- Internal skill and external knowledge transfer in partnerships
- Vocational training on workplace and talent development, binding structures against brain drain in partnerships
- Advanced vocational training.
- Decentralized management, abilities on subsidiarity and dispositive factors in partnerships
- Management of health in the workplace, protection safety and occupational health, health and safety officer, occupational health and safety in partnership
- Customer satisfaction, employee satisfaction, entrepreneurial satisfaction, investors satisfaction

Material factor intensity measures-environment climate protection

2014 High importance - Environment and climate protection measures

- Technology and markets innovation on environment game changing in partnerships
- Environmental protection, climate protection social media
- Attractive product mark, attractive service mark, attractive plurality and diversity of partnerships
- Addition to capacity, grade of quality, personal grade of services, grade of sustainability in partnerships
- Compliance as dispositive factor in operation and subsidiarity structure in partnerships
- Corporate governance by identity building in partnerships, climate risks partnership in off-campus consulting, anticipating risk in equities, in investments, employees shares in partnerships
- Location development, real properties in partnerships

- Legal or economic environmental , raise, enhancement, run up, increase disruptions, shareholder value, enterprise value of partnerships
- Amendment, improvement, incentives, reform, to upgrade Mobility, game changing logistics in partnerships
- Interconnectedness integration, linking up, crosslinking, photonic cross linking intermodal transport, mode of transport, traffic carrier for clients, staffs and all other factors.

Human factor intensity measures-personal working environment

2014 High importance - Personal and working environment measures

- Staff, working environment for internal and external game changing in partnerships
- Water management and mandate issues in partnerships innovation management, brainchild protection , conception, notion, idea, image, in partnerships
- Emission free , low emission, reduced emission air pollutants in partnerships
- Certification, performance of certification management, system, abatement incentives, certification procedures
- Sustainable construction, energy efficiency
- Energy mix, - input , - use of , Efficiency
- Utilization of resources conservation, schedules to preserve, to save, to spare.
- CO2 reduction of green house gas emissions
- Noise abatement measures

Sustainability factor intensity measures–integration wealth

local, regional and global measures

2014 High importance of local and regional dialog and corporate responsibility measures

- Regional dialog on corporate and wealth opportunities and responsibility for game changer roles within 2. track of politics and local industry stakeholder and financial intermediates on sustainability.
- Regional engagement for entrepreneurial scientific sharing in sustainability

- Sharing sustainability in public and private purchasing, in procurement, in supply chain integration, in collaborative supply chain services and in partnerships
- Communication with stakeholders in serious gaming, social media, twitter, facebook et.al. in transparent partnerships
- Cooperation with regional partners and supply chains in comprehensive sustainable common goods.
- Transparency in digital sharing on competence with government, regulator, enterprises, civil societies and people

2014 Resulting impacts by TIMA SME Statesmanship in international local partnership relations to primacy of politics

According to the TIMA 6 doings for the 10 UNGC principles in digital SME partnerships the success factors are always participating in all locations involved. The SME Statesmanship in partnerships in international relations enable all partners as key drivers to local migration for innovations of all participants in SME CytoGrowth partnerships and the usage of circular structures at any place by all partners.

Any SME partnership creates for partners involved in their origin national societies and markets at any local place globally similar digitized SME effects on the macro- and micro economic environment.

For a German based part of a successful digital SME partnership measurable impacts on macroeconomics in the “German magic square goals” and the sustainability development of politics for more plurality and diversity is based in local high end digital competitiveness with the sharing of global partnerships innovations on the local level and participation in circular economy for a stable social market 4.0 and IoT of the future.

This encourages the local SME partnerships high employment rate driven by the high innovation sharing rate within the SME partnerships contributing to a steady raising in the level of the cross border balance in trade.

The local economic growth of digital SMEs partnerships is managing the digital technology for the game change in materials and the turnaround in market flexibility in new customer relations and the usage of circular life-cycling systems.

The authorities of banking supervision and central bank re-think the impacts on digital age for currencies. The monetary stability in digital SMEs partnerships seem to support the uncoupling of society and market risks within the digital SME partnerships, by digital transparency, rules of sustainability in the digital SME partnership performance. As gilt-edged investments and securities for capitalization or stock exchange value increase or private wealth development.

In the local environment in Germany the digital SME CytoGrowth of partnerships contributes to a balanced budgets in urban households of the treasurers in cities of locations for digital SME partnerships.

The digital SME partnership principles skill and enable the foreign SME partners in digital SME partnerships to participate with innovations in German law, regulatory and legal frameworks and in the mutual understandings of German fiscal and financial regulatory policy in the German social market.

The digital SME partnerships share, exchange and strengthen by digital knowledge transfer the ability to take responsibility as dispositive authority in business integrity within the stake- and shareholder in the society environments stabilizing society impacts on human living, safety and security.

PROCESS MANAGEMENT

The TIMA CEO and president call yearly the efficiency of systematic rethinking and reengineering council of all issues of sustainability in the corporate environment. Within strategies and services for the customers and clients or in partnerships, we respects individual and personalized pathway according to the profile of the enterprises. A key message to our teams, partners and all clients and customers and sharing partners is to walk the talk and to organize the Tima international within the principles of sustainability in the fractal approach we underline our individual strategies and structures for all markets and society opportunities.

The implementation of measurable sustainability in the process management is part of the public license to operate for all enterprises as well as for TIMA. The game changing abilities of the management to more business statesmanship of companies are a key dispositive factor for all on the enterprise pathway to shared unlimited growth in globalization. In upcoming digitalization of societies and markets the managers in all playing fields of the corporations face serious game changing

broadening in their individual competences as our dispositive force and fractal understanding in operational sphere of influence.

2014 every TIMA manager bears responsibility on sustainability for the employees entrusted to him/ her. Every manager must earn their respect by exemplary personal behavior, performance, openness, and social competence. He / she shall set clear, ambitious, and realistic goals lead by trust and confidence and leave the employees as much individual responsibility and leeway as possible. Every manager shall also be accessible in case employees wish to discuss a professional or personal problem. We don't accept in our teams gender inequality.

2014 TIMA process driver to digital social markets for UNGC sustainability with game changing human forces as customer and as clients for better living

TIMA unique sharing of the 10 UNGC principles with digital game changing human forces for markets and society satisfaction with digitized automation upends in an evolutionary surpassing the traditional rules of competitiveness by individual sustainability and performance with platform connectivity and IoT/ Internet of Things.

TIMA acts as designing and guiding partner to build and implement strategies and structures with clear integration of all clients resources to the targeted values in time within the 10 UNGC principles and all mentioned guidelines. Within the development in a binding masterplan and business plan with in a steering committees of drivers all processes start. Rethinking functional services in banking ICT, education, engineering and certification are as well as sharing in partnerships are part of the masterplan to enable the employment to manage the change to markets to societies and to customers for a clean performance. TIMA serves to the owners of the enterprise partnerships with the SME digital services partnerships within 2015/16

The rules of UNGC are obligatory in all internal processes of TIMA especially in all personalizing and individualizing elements. They are profiled and heading for high grade qualification, cross cultural knowledge and personal integrity and digitized management of the sustainability cost intensity in a TIMA outcome within steady growth, socio-economic improvements and wealth in sharing desires of customers by technologies and IT services for process management solutions with lower production factor cost intensity.

2014 TIMA public and private customers in sharing on UNGC

All procedures to communications on progress are open for independent working groups outside TIMA in transparent opportunity relations to TIMA issues on value networks of the future.

Key value network strategies in public and private business need vanguard ICT forms of partnerships in issues on politics, finance, financial intermediates, industrial, trade, service and science involvements. Depending on the game changer, in seize, various sectoral timing factors and overall value volume, the resource allocations follow specific markets to value networks playing fields with given demands of society in value creation frameworks. This is to regard in all cross border relations. TIMA SME partnerships create autonomous enterprise relations with digital services transparent in the partnership to the owners, In TIMA Wealth and Work as well as in TIMA Cytogrowth the multiplication of fractals and innovations is completely accompanied by TIMA digital partnership services for clearing, billing, education and investments in the SME partnerships.

Digital zero time to market abilities and digital opportunities of private sector are the fundamental game changer to lead short notice market flexibility in daily operational field, and must be part of rolling terms in strategy procedures and sophisticated structural balance sheet planning anticipating public business volatilities and gaps in retirement arrangements or public business volatilities in free market forces..

For every TIMA client the unique vanguard partnerships building is also an individualized and unique protection opportunity for the employees and owners of companies to save the pattern of thought as intellectual property within funds for the evening of life and support of the next generation, as part of the commitment to social market economy. This is a TIMA sustainability proposition for long term partnerships in trustful relations, easy and economically to handle in finance, marketing and technics for the management in SMEs and very attractive to all base of the pyramid situations.

2014 Partnership benchmark for TIMA sustainability - 30 % of all client business lines of value networks have to be rethought since less than 2 years, no business line should be older than 6 years without reengineering procedures in SMEs as well as in HGEs. The flexibility of TIMA for market demand is given for 2014/2015

2.5. Sustainability and Responsibility

Measurable sustainability rules are part of our TIMA core business in SME Partnership building and our digital services in the society and markets relations expressed in unambiguous attributions to sharing and guiding in procedures.

Every manager must fulfill duties of organization and supervision on sustainability. It will be the responsibility of every manager to see to it that there is no violation of laws within his/her area of responsibility which proper supervision could have prevented or rendered more difficult. The manager still remains responsible, if he/she delegates particular tasks.

The following shall apply in particular:

The manager must carefully select the employees for their personal and professional qualifications on sustainability. The duty of care increases with the importance of the obligation to be entrusted to the employee (duty of selection).

The manager must formulate the obligations on sustainability in a precise, complete, and binding manner, especially with a view to compliance with provisions of the law (duty of instruction). The manager must see to it that compliance with provisions of the law is monitored on a constant basis (duty of monitoring). The manager must clearly communicate to the employees that violations of the law are disapproved and will have employment consequences.

2014 TIMA and partners

Regular internal preparation in specific teams for projects on TIMA value network proposition

2014 TIMA and customers, clients and open partners

Regular events on sharing and exchange on opportunities with share holders and stakeholders

2014 TIMA in project playing fields

TIMA shares its knowledge for the final decisions making of the owners of the partnerships. The senior management is responsible on sustainability tools in modernizing the digitalized frame of TIMA.

The personal intensity for guiding is mainly determined by the opportunities and the “management learning by management” principles. TIMA senior management delivers vocational frame for management by management training. TIMA specialists are driver in a new game changer team for partnership building within the masterplan rules and steering committees decisions.

TIMA senior management provides advices to owners for final decisions or in disruptive situations. The owners finally decide on all issues in the SME partnerships.

2.6 Rules and Processes

TIMA shares all service achievements and the sustainability strategy with rules and in processes in the playing fields of our operations to design, build and transform partnerships.

The Company considers it important to prevent its employees from succumbing to conflicts of interest or of loyalty in their professional activities on sustainability. Such conflicts can come about if an employee is active on behalf of, or has interests in, another company. The following rules thus apply for all of us.

It shall be prohibited to operate a company which competes in whole or in part with clients. It is not permitted to hold direct or indirect interests in a competing company not listed on the stock exchange which competes in whole or in part with TIMA GmbH or any of its Partners .

Prior permission in writing is required to hold the following interests:

- in companies which are business partners of TIMA GmbH or one of its Partners ;
- in companies in which TIMA GmbH directly or indirectly holds voting rights of more than 20%;
- in companies for which capital is directly or indirectly made available by TIMA GmbH .

Permission will be granted by the appropriate member of top management and documented in the personnel file. Permission shall be withheld or withdrawn if the employee has business dealings with regard to the company in question. The same shall apply if the employee is able to influence the business policy of TIMA GmbH or any of its Partners with regard to this company. Any interests held by members of an

employee's immediate family in a competing company or another of the above described companies must be communicated in writing and documented in the personnel file, insofar as the employee is aware of them.

2014 Tima and partners

The TIMA procedures and workflows are documented . In case of co-operations these documents are harmonized before the cooperation is build and fixed in economics. The final procedures are controlled by TIMA on UNGC principles for all procedures. Once a year the TIMA Partner seminar will share and exchange the years experiences and decide on further applications.

In TIMA corporative decisions all sustainability impacting development are exchanged for relevance to next COP contribution and according to this decision implemented in the TIMA procedures and workflows fixed in the actual Code of Conduct of TIMA

2014 the actual version COC 1.7 version 2014 was finally reviewed by the senior management and the documents handed over to the shareholders meeting in 2015

2014 TIMA in customers and client relations

2014 the key element of TIMA sustainability rules is to reach the consensus in cohesive frame by the code of conduct developed for every partnership building with the responsible management in charge and the game changer in the teams within the preparation phase of masterplan elements.

2014 for the daily business clear preferences to low emissions in home to business travelling, sharing and networking travelling is the proposed task part of measurable facts in the relation of CO2/per mile and year of every employee.

2.7. Monitoring preparation 2014/15

TIMA monitors the progress of sustainability development in the internal planning and controlling discussions for approval routines in partnerships and subsidiarity as well as all preparations on technological and IT partnerships to provide the 4.0 and IoT services.

Any records and reports on sustainability produced internally or distributed externally must be accurate and truthful. According to proper bookkeeping principles, data and

other records must always be complete, correct, and appropriate in terms of time and system. The requirement of truthful statements applies to expense accounts as well.

Every manager bears responsibility for the employees entrusted to him/ her. The senior managers must earn their respect by exemplary personal behavior, performance, openness and social competence. He/ she shall set clear, ambitious, and realistic goals lead by trust and confidence and leave the employees as much individual responsibility and leeway as possible. Every senior manager shall also be accessible in case employees wish to discuss a professional or personal problem.

Every manager must fulfill duties of organization and supervision. It will be the responsibility of every manager to see to it that there is no violation of laws within his/her area of responsibility which proper supervision could have prevented or rendered more difficult. The manager still remains responsible, if he/she delegates particular tasks.

2014 all TIMA employees use the same fractal way of doing in small and big game changing and in local and global game changing sharing. Transparency assures all of the game changing efforts and results.

2.8 Incentive system preparation 2014/15

Within the digitized SME partnerships building reliable long term relations and accumulated learning-curves for innovation or circular outcome is a driver for the TIMA objective and target agreements. They were managed in sustainability concepts of SME partnerships and in TIMA internal administration of the TIMA digital SME services.

The incentive system is under radical rethinking process including all TIMA employees about regular wages increase according to the real value creation in operations and markets and the lifelong employment with preparation for lifelong requirements for the aged and social and health packages for the families of employees. This concepts will not be available before 2021 with the 25th.anniversary of TIMA.

2014 first meetings on lifelong requirement with specialist were started and the expansion to SME partnerships in Cythogrowth relations included..

2.9. Stakeholder involvement preparation 2014/15

The TIMA shares and exchanges with relevant corporative and market economy driven stakeholders the enterprise services disclosing benefits of transparent relations.

Open and effective cooperation requires accurate and truthful reporting. This applies equally to the relationship with investors, employees, customers, and business partners, as well as with the public and all governmental offices.

2014 inside development are shared by all senior managers. Stakeholder environment of TIMA is transparent and interactive with top down and bottom up exchanges and the sharing. The clients and customers complete involvement as stakeholders is directly managed with clients and customers according to the national commitments to sustainability and UNGC principles of TIMA.

2014 First meetings with specialist on stakeholder involvement in webinars were implemented. Cross border webinars and events were realized with the involvement from capital markets, buyers market, sellers market, retail market, with competition networks of associations, enterprises, labor market, politics environment of government, regulation entities and standardization institutions, society, NGO's, civil societies, science community of R&D and education, Media, social media and online media for stocktaking experience in game changing strategies of TIMA.

2014 TIMA was successful as driver on game changing issues. Corresponding partnerships with DTMG e.V. and DECHEMA e.V.were intensified.

2014 TIMA participated within networks of OAV/APA, spread all over Asia, in sustainability events and meetings for fruitful technical strategies

2014 TIMA opened new playing fields for sustainability mitigation and adaptation. with strategies of modernization of health, agro, bio-economy, ICT relations and energy intensive branches.

2014 TIMA started to share with governments, entrepreneurial circles and civil societies and UNGC in EU, US, AEC, Latin-America, Africa and first step in Near East decision making procedures, opportunities for partnerships and regulatory affaires to establish the TIMA value networks partnerships for SMEs to compete in globalized market structures with co-operations and benefits for all.

2.10 Innovations and product management

The TIMA services support strategic and structural improvements in sustainability in all playing fields with clients as in efficient resource allocations or general benefits. These contributions to value networks were also used in similar SME partnership and in TIMA. This will be completely integrated in the TIMA digital services (iGr) for all SME partnerships.

Sustainability in SMEs is a most underestimated driver in turning around value creation by techniques of robotics combined with smart better working for globally added values by personalized new “marketizing”. With overwhelming advantages for all by high performing profitability and high individual market flexibility in millions of fast employment generating SMEs, the mainstream of high complex dinosaur-like central economics will face fundamental society and market difficulties.

TIMA co-operates with institutional bodies for eco systems according to DIN EN ISO 14040 – 14043, and the unique sustainability performance driver of 4.0 and IOT in technological partnership with high economic potentials of TIMA digital service structures in TIMA SME partnerships. All of them are real value creating irreversible cuts in proportional and fix costs of decentralized manufacturing automation performance in SME partnerships as well as the cost cuts in digitalized and personalized sales performance causing unlimited growth in volume and pricing on innovations with short notice access to all markets with boosting employment.

2014 the TIMA core structure contributions were answering with sustainable reengineered strategies for investments, IT and IoT. TIMA is revitalizing all integrated vertical industrial strategies in flexible value networks. The forgotten principles “from earth to mouth” for reliable human safety and affordable price performance within the supply chain of to-morrow were anticipating the severe paradigm changes with smart evolutionary reliable resource allocations.

2014 TIMA informed within the rules and principles of UNGC, social market economics and integrity frame of the Global Movement of the Moderates on innovations with entrepreneurs of all emerged and emerging markets, receiving governmental support to first discussions and sharing contributions to the elements of

internet modernization, big data impacts, in cross border and companies digital value networks.

2014 the TIMA innovation effects of partnerships attracted attention and its economic impact on TPP and TTIP on all forms of capital shift results in many exchanges and sharing of views. The winners are governmental local benefits in socio-economics, already in the first stage on fundamental game change with highest potentials for European partnerships in America, Asia, Australia and Africa. In 2014 all discussions of TIMA were clearly related to the UNGC and the UN corporate sustainable forum with transparent information to the German and all local governments related approaches to reflect the building of opportunities in new vertical value networks partnerships with SMEs, especially with family driven enterprises.

First drafts in 2014 of horizontal value networks between SMEs gave a vibrant impression on the impact to the base of the pyramid in each environment and the needful participation of science based rethinking on value networks in green, red and white bio-economics.

2014 the key focus for first value network partnerships of TIMA are individually designed investment masterplans for strategic, structural and operational solutions for enterprises in manufacturing, services, trading and defense in all sectors. TIMA co-operates with vanguard ICT providers, upcoming internet/cloud systems and software applications to take the lead clients to become better, faster, and ready for sustainability with access to unlimited contributions and opportunities to better living in steady growth .

2014 TIMA continued to reduce its intensity on factors in new circular thinking. All aspects on sustainability benefits are regarded in modernizing opportunities of workplace security and safety, infrastructures and in processing of treatments in value networks.

ENVIRONMENT

The TIMA strategies and structures anticipate human individual empowering to manage digital sustainability, digital societies and digital markets as private investor and consumer, professional customer and deliverer, as employee in value networks and public tax payer, voter and pensioner within all situations of individual life, family and profession, matching environmental responsibilities of the digital society and

markets by primacy of politics in regulation, by entrepreneurial competitiveness and market flexibility and by wealth and capital safety and performance in sustainability for balanced magic squares in each nation. This issue of primacy of politics is an decisive framework in all societies to educate individual game changers and strategies and structures for a successful access of all to digitized globalization. It is also a legislation issue to establish individual human rights and inter-generation fairness in digitized environments regardless to age, birth and gender or any other discriminating barriers.

TIMA sustainability strategies focus on game changing in all production factor costs intensity, lifting potentials, innovating opportunities and delivering contributions to diminish risks in a post climate change order for wealth development , diminish risk for society development and diminish risks of market development.

TIMA is sharing and exchanging permanently with customers and clients of the game change in competitiveness in human, capital and material factor cost intensity as the essential base to performe better with the sustainability cost factor of entrepreneurial competitiveness in the future. A rise on climate friendly input by investments in innovations, in increased efficiency and divestments and the replacement of risks and threatens is authorized to be adopted in all services of TIMA sustainability factor cost developments and shared within all digitized TIMA SME partnerships globally in the coming decade.

The key environmental and climate protection means for TIMA that we provide services and shared business within our own commitments to sustainability. In our propositions all our products and services strengthen the individual value networks of our customers to create long term value in financial, environmental, social and spiritual terms.

All of them are bound to key traditional economic factors of mankind and will cause disruptive evolutions in the capital shift of hope, the primacy of politics and the autonomous entrepreneurial leadership to build reliable pathways to prosperity without climate risks for all,

The digitized transmutation for local customers desires, rethink marketing completely and boosts balance sheet dynamics for intangibles to tangibles.

The decentral automation with science designed materials producing net shape outcome for direct local deliveries reengineer dino-complexity and administration to market flexibility with global market shares and balance sheet revolutions in real estate and inventories causing immediate stock exchange eyebrows for the best value network and efficient sharing for wealth development

The individual value networks of digitized global SME partnership illuminate the rapid outburst of innovations in all local markets, affordably fitting unlimited quantitative growth by watching social media and hungry markets to demand their personalized plurality in diversity at any place.

The digitized monetizing and capitalizing is a re-processing on capital driven structure to peoples driven performance in new relations with fundamental new finance approach of global SME partnerships value networks in unprecedented competitive production factor cost and strengthened enterprise capital structures and sustainability improving outcomes caused by the above changes in material flows, machinery equipment and commodities and the impacts on real estate and mobility.

2.11 TIMA usage of natural resources, resources management, climate relevant emissions 2014

TIMA actions and results 2014 on usage of water, ground, waste energy, landscape, biodiversity or emissions. TIMA is continuing to find individual solutions to change business offices for avantgarde matching the desires of customers. Changing the mobility along with employees acceptance and entrepreneurial identity building with customers.

TIMA is exchanging and sharing with stakeholders and shareholders an integrating leadership in partnership approach to ease for all the mutual understanding and the individual participation within the development of TIMA in his entrepreneurial vision and structures to realize our innovation performance and to change our sales performance in an personalized serving momentum being tailored by our customers and their desires in strategies, structures and services for goods, processes, and sustainability guidance in digitized future.

Therefor TIMA started in 2014 a transparent process for two years to explore a new form of data exchange on the usage of natural resources that shows the direct and

indirect impact on our four entrepreneurial success factors in TIMA, and the success factors in the clients business for the individual strategies of partnerships.

Classification for TIMA (Start 2014 exploring)

Direct: Electricity includes IT processes, aircondition, indoor and outdoor lightning, batteries, in all locations and all electricity consumptions on devices the employment needs for best workplace and working conditions and best time sharing conditions with share and stakeholders.

The strategy is to find game changers for actual processing to replace CO2 intensive solutions and reduce the CO2 intensity of TIMA structures to zero, with smart energy use and local capacity storage,

Oil, gas, wood, includes all in and outdoor heating energies in all locations.

The strategy is to find game changers for actual processing to replace oil and gas, to reduce the CO2 intensity of TIMA structures to zero. Wood consumption will be integrated in opportunities on personal factor.

Drinkable water, cooling water, used water, in all locations includes all fresh and used water processing.

The strategy is to replace all bottled water usage by connecting a fresh drinkable water system for human safety and connecting the used water with opportunities for best circular systems of the locations environments

Gasoline, includes all emissions and sooty particles relative to the consumption induced by enterprise business related mobility in cars, trucks, trains, ships, airplanes and space

The TIMA strategy in mobility for shareholder, stakeholder and the families of employment involved is to create opportunities for smart flexibility as part of investments in serious gaming technology, home office and new technological service visions removing mobility barriers for better living within human factor or gaining carbon free mobility on material factor intensity.

The TIMA strategies for game changer in the broad field of logistics, marketing and sales performing structures aiming to the highest market flexibility of our clients with

high entrepreneurial opportunities for the capital factor intensity in solutions to reengineer the value chain for personalized clients completely.

This TIMA serving approach to clients is part of the increasing customers dominated push structures in all deliveries making spheres in trade, services and manufacturing and in all business lines of the private sector or of the public sector in zero time to markets without stock, retailers and sales structures but IOT, applications, big data connectivity to the customer.

According to the above strategies and opportunities in the capital factor intensity also new forms of complexity game changer will be irreversibly a part in strategies of the game changing in capital factor intensity to fit enterprises for the race in unlimited growth, decentralized automation or robotics with simplified mass material logistics and local substances steered in sophisticated big data and IOT connectivity and content management with another strong relation to the enterprise human factor intensity in skill and knowledge,

TIMA strategy is to replace all mobility products, services and technologies within our entrepreneurial influence by opportunities and structures to contribute to human safety and security for all with low to zero CO2 intensity and to share the same strategies in TIMA value network with our partners to benefit our customers . With opportunities to a zero CO2 climate risks in mobility all impacts of third parties to suppress cross border growth are eliminated.

In all TIMA strategies for shareholder and stakeholder the 4 factors resource allocation share better living for all with best wealth performance in partnerships is a Kingsway to the upcoming decade.

The greatest opportunities for all of this innovations come from strategic shifting in the flow of commodities, using new technologies in climate preventive logistics concept and autonomous mobility strategies. This will introduce much more politics and is another reason to relay also on the fourth sustainability factor intensity beside the classical 3 factors of the past..

Land consumption, furnish, communication,

The strategy is to care on opportunities to save diversity and plurality in the land consumption by with the TIMA entities, offices and their outdoor areas. It is the goal

to change the offices profile to communication and innovative exchange centers. The opportunities for effective game changing are serious gaming technologies to communicate in partnerships on game changer and all forms of applications to stay in touch with all stakeholders, shareholders and employees, as well as with media to manage disruptive impacts. The changing processes are mainly attending human factor intensity.

The strategy in furnish plus communication surpass the toner deliveries in with the fascinating opportunities of 3D printing to build remote automated centers for print and design, print and build or print and pack embedded in automation processing and its opportunities.

The TIMA strategies to structures in complexity needing large lands use, in nuclear, mining and other energy intensive heavy industries combined with circular economics are the base for vibrant new approaches to the traditional mechanical industry. Here is the most important door opener to opportunities in the revitalization of responsible investment in key industries based on steel, alumina and other material with high pressure or high temperature heat resistant materials for nuclear fusion technology, shipbuilding technologies and plant engineering and construction.

Indirect: wastes, textiles, mobility, office living and housing, office materials, marketing, services, maintenance, outdoor installations

The strategy is to engage all employers in the enterprise rising responsibility on environmental carbon free processes. The opportunities for solution need to benefit all and to decrease factor intensity in economic way

There are more individual opportunities to gain than to loose and the trust and identity building is very high. In the very end a better living with a better performance for all is realistic especially in partnership building synergies. With decreasing capital factor intensity, with decreasing material factor intensity and decreasing human intensity but fast increasing sustainability intensity the steady increase wealth performance for all is the result. For the TIMA and the TIMA clients by TIMA guidance and strategies these paradigm changes regain the competitiveness along the value chain .

2.12. Ressources management

TIMA manages the idea input for enhancing resource management to all employees and shares the conceptional solutions for efficiency and savings with clients

2.13 Relevant climate emissions

Following the GHG protocol we act on the three scopes for measuring the emissions.

www.ghgprotocol.org

TIMA will take two years in sharing and exchanging the issues for final decision making on our evolutionary pathway in game changing resources management and climate relevant GHG protocols in form of COPs from 2017 onward.

SOCIETY

Nuclear reality and security – finance and wealth protection – performing economics in work for all, are the key frameworks of societies and markets and the drivers and game changer. TIMA SME statesmanship supports gubernatorial power in second political track for local subsidiarity in digitized sustainability of the UNGC principles with a structure of global individual social cyber market 4.0 and IOT as a key approach for free local prosperity and growth in partnerships.

The experience of peoples on nuclear disasters of the past, is no guarantee whether in 2014 nor for the future.

Free individual humans driven democracies, based on civilization development in law above might, seem to keep the nuclear threaten more balances and responsibly managed for mankind, than most probably, all impacts of imperial, colonial, nationalistic and centrally driven tyrannies or terroristic religious or ideological extremists movements, that empower by mobilizing enslavement in collective think patterns to discriminate and destroy the living of humans and families as happened in the past, at the moment and in the future.

In sharing transparency and integrity in measurable value networks of real value creating SME partnerships at the bottom of the pyramid stop crime and corruption disclosing the cyber communications opportunities in the internet at any place.

Therefor 2014 all TIMA SME partnership strategies and structures in support of the 10 principles of UNGC for digitized sustainability developed a vanguard performance form in the sharing economy by an architecture of an individual peoples and families driven globalization to connect their work with wealth opportunities at any place within autonomous entrepreneurial partnerships and the primacy of politics in a free local environment for all.

The better pathway to prosperity for all including the government is the shared prosperity of work and wealth in an attractive and innovative economical individual upstream and downstream framework to overcome in smart partnerships former industrial dependencies within solid tax flows.

With WTO rules in a multilateral dimension and multilateral post climate change rules creating a measurable low sustainability cost factor intensity for an architecture of multilateral world private and public financing order could match and integrate traditional western global monetary resource allocations, with optional sukuk (islam) banking as well as AIIB, BRICS, AWF AZB and AIB. Such digitized reliable financial frameworks with standards in all markets, managed by standardizing entities of state owned, non-governmental and intermediate organizations fit and encourage sophisticated SMEs participation as local game changer in digitized sustainable globalization or as an opportunity in synergies to large scale investments of Hyper Global Enterprises HGEs or MNEs, saving investments and winning flexibility

Wealth and work in cross cultural finance and cross cultural value network accelerate all inspirations on any capital shift of hope sharing their new learning curves in local decentral high end automation outcomes in the innovation economy as well as in circular economy from e-mobility to smart mining, extraction, materials and all city lifestyles and life science value chains emerged in the raise of belts, roads and rail, silk roads, maritime shipping, connecting spotted digitized human relations between America, Asia, Africa and Europe face to face and machine to machine for human driven commercialization at any place, financing increased efficiency in sustainable employment in plurality in diversity.

The transparent modernization of global structures of finance in G20 anticipates 2014 an increasingly call for a higher global acceptance of Art.1 Ziff. 3, 55 and 56 of the UN Charta, the more the inclusiveness and completeness of societies can't be locally realized for adequate wealth and tax responsibility for all. The perception heads for a

further development in governmental administrative and global gubernatorial structures for political second track subsidiarity on local level supported by SME Statesmanship.

The demand for free individual and autonomous SMEs partnerships will raise within digital global skill exchange in smart SME education forms and with a new market flexibility game when customers provide digitized new “marketizing” to enterprises.

TIMA anticipates 2014 that wealth is following the lowest capital- and sustainability cost intensity of matching the new digital relationship in SME partnerships and wealth. This positioning is a part of the perception in the 2014 TIMA strategy in support of movement of the moderates, primacy of politics, wealth protection and real value creation in local work, by family driven enterprises around the world with UNGC principles.

2014 successful private financing of Globalization is growing business for small and medium enterprise partnerships, needing a balancing frameworks agreement in their local sphere of influence to realize individual financial transactions with transparent low imponderabilia, impacting trade, finance, currency exchange rates and transparency on depths impacts of states, anticipating with global gubernatorial and administrative structures of subsidiarity as well as local elements for arbitration in specific SME partnership conflict solutions.

Nearly 95 years ago the Taylorism in USA became the key industrialization driver and game changer of modern capital markets connecting wealth and finance with new industrial factor cost intensity for unprecedented higher productivity, efficiency and disruptive competitiveness in all markets. The outcome of US process- and market leadership with highest expectations in better performing, rallied the stock exchange markets to undergo the capital shift of hope in the primacy of politics to global leadership of capital driven work sharing after the end of World War II.

In leadership the USA navigated the pace of societies with NATO and capital driven economies in free societies. Since 25 years communist centrally controlled states challenge the western societies with modernized centrally driven frameworks of monetizing, capitalizing and marketizing decreasing their production factors cost intensity of human costs, material cost and capital costs in favor to stabilize their

centralized totalitarian regimes without human rights, individuality and free autonomous entrepreneurial market access. Since 2001 globally organized fanatic terrorism forms impact human safety and security in totalitarian theocracies at any place using their sphere of influence to abolish any western human rights of individual spirituality and free individual way of living in a confrontation on spirituality.

There are actual two western society and market approaches for a convincing architecture of the future to overcome this threatens to a free and better living .

First to integrate cyber technology for all human beings of the national pyramids in individualized skill and education for

Second more than 20 Mio. small and medium sized autonomous often family driven enterprises in Europe.

Third sharing there cumulated national experience curve for plurality in diversity in a

Fourth European Kingsway to fit competitiveness in globalization, heading with 4.0 automation and sophisticated use of IoT for individualized free social cyber driven markets with vibrant vanguard game changes matching not only

Fifth post climate change regulations as well as post colonial value networks in all free markets and societies with

Sixth vibrant global partnerships of enterprises. In this Kingsway

Seventh work and wealth merge on real value creation, with high end large scale employment within innovation and circular economy for

Eighth attractive capital shift of hope interests with extreme low dependencies on production factors of the past in the new value creation networks including bitcoin € with outclassing outcome at any place and time.

The US industry pronounced in Cancun their kingway to commercial sustainability by capital driven cyber markets with the US leadership role in HGE's with personalized markets for leading performance and fintec and bitcoin on \$ experiments

Together in TTIP and TPP these 2 Kingsways will merge in a global contribution with synergies in the matrix from HGE to SME shared business of better living with added value by robotics and high end customers desires pushing markets.

The narrow focusing on real value growth in work and wealth accelerated the desire to free societies and markets with entrepreneurial autonomy by US globally. Especially West - Germany integrated its destroyed economy after World War II in the western community, lead by chancellor Konrad Adnenauer. Even based on central-european sources in Catholic Ordo Socialis and Lutheran impacts on law since 1648 and on Prussian based history, the Post War II West - Germany government beamed the nation with a cut into a modern social market economy and a jump into the "Wirtschaftswunder". A quarter of the population of the German nation was excluded till 1989 and experienced individual processes to integrate in the free world, coming out of central governed socialistic environments, in a world that is exceeding the speed of change.

Within TIMA and TIMA services the social market standards in Germany in sustainability are shared worldwide in our strategies and digital structures we also developed a 2014 Charta of TIMA social cyber economy codex according to the prepositions on installation of strategies and of technologies and processes . Within the new digital environment of society this entrepreneurial game changing technologies and fitting value networks partnerships are divers for better cohesion between enterprises and their employments in partnerships. This also positively impacts work with human, material and capital cost factor intensity with smart decrease for less specific monetary, material and human cost burdens which simply means improved competitiveness by unprecedented higher productivity, output and shorter time to markets. All these ideas of matching skills in intangible assets and other corporate learning curves of skill and best practice turn to new workflows as source to create tangible goods in partnerships without technical investments and capital which means an attractive increase in wealth with lower human, capital and material intensity resulting in an increased Sustainability factor of trade, production and services in the minds of buyer and customers in society and market.

2.14 National and international employment rights

TIMA is mapping the issue from German law and ILO according the above described guiding and sharing legal frames, human safety and human face in all human driven functions, responsibilities and managing dispositions. Within our strategies and game changing digital structure for management control and procedure, the workflow became a subsidiarity participation within the 6 doings in mutual agreements for

partnerships, new HR design is creating value chains steering by dispositive factors in cohesive learning responsibility for high quality output as kit of proud between work and wealth.

2.15 Equality of opportunities

TIMA as strategic partner of leaders and people in society, markets and industry we are driver that in digital partnership issues things are transparent and balanced to disclose all opportunities as well as all traps and risks with game changing evolutionary impacts for all. Following the planned improvement of the measurable digital sustainability factor in the projects perception all values generated deliver more benefits to all in work and positive ROI of wealth stabilizing a society/city environment in all local situations. The goals of TIMA in all strategies shape improvements of plurality and diversity creating good practice for family issues, integration on migrants and disabled and a vocational health approach for the employees within the primacy of politics in national conditions as vanguard attributes to partnership as driver against discrimination and for vocational training as intergenerational cohesion. The SME statesmanship in partnerships have unlimited opportunities to change from a good past to a better future for all in cross cultural architectures.

2.16 Qualification

The embedding of digital SME partnerships between enterprises containing fitting forms of qualification in internal exchange in webinars along the value chain as well as in the matrix of value network expansion. The application of serious gaming solutions for vocational training and mutual understanding in transparency are current improvements. For game changing parameter this digital operational qualifications follows structural new partnerships in a matrix to realize the strategy of sustainability.

This is the most efficient, productive and syndetic pathway to promote the ability to participate in new partnership business environment successfully for growth and prosperity.

2.17 Human Rights

TIMA InNetMediation safeguards human rights in partnerships by employees backing human rights as a dispositive factor for the enterprise and customers benefits, within

an economic frame of superior competitiveness in entrepreneurial SME partnership value networks than in central systems with key pillars of SOEs.

Cyber innovation economy and human rights

The TIMA strategies and structures, especially in any digital SME partnerships, for sustainable business integrity are drivers for vanguard cultural human relations in the development of digital societies and markets worldwide for free autonomous enterprises, especially for family driven SMEs in partnerships.

With the input of comprehensive InNetMediation to raise the bars TIMA exchange real time knowledge, rules and experience raising the abilities of all humans in a company or entity, to share responsibility as valuable dispositive factor in entrepreneurial actions. This turns workforce in an anticipating digital swarm of smart individuals matching digital opportunities in real time by this elementary game sharing fractal for an enterprise partnership.

Connatural purchasing and selling in digital future is part of the same fractal in the digital business. The pushing for more innovation and for more data to product as a team responsibility is part of the same brand integrity as the individual human responsibility to serve for more sustainability and more market flexibility in all human faces of personalized customer - enterprise relations. The game changing starts with the owner and wealth and ends in the swarm or team of SMEs to serve the customer in digital and real brand sustainability.

With the InNetMediation TIMA designs, shares and guides partnerships in this fractal operations. The SME partnership investment in its humans is to invest in “human work” as brand for continuous wealth development by local economics of sustainability and better pricing in a stronghold position of competitiveness.

Digital education, training, skill and knowledge transfer in the SME partnership is sharing for self-reliant, self-confidently acting entrepreneurial men and women as global SME employees, taking more responsibility to serve for the digital and real process flexibility in the personalized customer - enterprise relations over an individual life cycle of humans. The additional support by machines, robots and automation in such a sophisticated SME structure attracts by human completeness and wealth to shift capital to opportunities in local SME business.

This push and serve impacts hit all existing international work sharing system and will rebuild trade-mix and most value chains, their suppliers and sub – suppliers by local autonomous SMEs, pushing innovation and serving their individual entrepreneurial customers. To serve for sustainability and flexibility and to push the digital value network for innovation in sustainability is a human key game changer to local decentral structures as a global paradigm for the innovation economy, outpacing the imponderabilia in supply chains within sustainability including human rights and other global issues by local digital SMEs partnership abilities and power.

2014 TIMA shared and promoted in industry of UNGC that human rights are a basic element of mankind for prosperity in free sustainability. The modern use of digital data and machine technologies to realize dreams and desire of entrepreneurial customers in societies and markets from reproductive medicine to space laboratories in the innovation economy, is a promising approach to better health, education, living and mutual understanding to share human rights with all in autonomous corporate sector.

Cyber circular economy and human rights

2014 in the worldwide established multinational mining-, extraction-, metallurgical-chemical- oil, gas and nuclear-. industrial complexes, the extraordinary contributions to work, wealth and human security followed a broad range of new partnerships in industrialization. The output was managed with increasing efficiencies in ecological issues and policies to new energy-mix, new materials-mix and new capital-mix of the future.

But 2014 the successful failure of the primacy of politics to save the next generations opportunities for the better is not yet excluded and the global circular economy is the coming key playing field with technological game changer, process replacements and decentralizing in complexity for unlimited growth without climate change for global and local development to better living. TIMA shared and exchanged since our statement from Copenhagen 2009 in UNGC to the leaders of all leading industrial zones in the regionalized world to push green and clean research to efficiency for alternative economic game changing approaches for work and wealth .

The first economic sphere of industrial influence in the transformation of infrastructure for circular economies face a giant game change in all global business

success factors, logistics and trade of materials, solids, liquids or gas being closely connected by CO2 intensity impacts in the 2014 GHG protocol on final profit risks for the industry, transparent in all markets and societies for all enterprises.

By the usage of digitized virtualization, simulation and new processual design for the real change in infrastructural robotized solutions, the circular economies offer the political and financial matching of economic benefits in regionalization upscaling. The economic opportunities of reduced complexity of processes in organic and inorganic operations of extracting with local impacts on energy, water, air, temperature, pressure and time are part to localize best locations in the frame of quality, competence and downstream efficiency in the digital eco systems competition.

The highest ranking takes the local flexibility in automation and robotics with high end technology, for upstream finishing by skilled employment. The upscaling partnerships for business integrity care with a remarkably improved sustainability factor and human rights for a high wealth interest, define the capital structure of new partnerships for downstream and upstream solutions, and deliver with work and wealth a stable social cyber economy framework in the regionalization and local prosperity with reasonable tax incomes of states. The multiple SMEs in the finishing lines are the drivers of innovation pushing the robotized mining and extracting for the customers desires.

The second economic spheres of influence in these playing fields for free and sustainable development in human rights are the local industrial SMEs partnerships broadening the basic volume in recycling of materials to a global circular economy present in all cities, harbors and industrial belts of work and consum, work and ship or work and rail, remapping the maritime and continental flow of trade accelerated by the global powerhouse of super bowl in TPP and TTIP. The participation in opportunities with SMEs partnerships in such markets are influencing all national interest in regionalization and institutionalizing development worldwide in AEC Plus, EU, Eurasian Union and AU. 2014 TIMA anticipated and shared this issue in the UNGC with a specific regard to human security in business for peace.

We are sure, to understand the public license to operate as a peaceful UNGC message for this sensitive industrial transformation in an architecture of sustainability with human rights as a game changer for all in established and new industrial zones worldwide in transparency and integrity.

2.18 TIMA Common goods

TIMA established 1996 in Tuttlingen, is contributing to common goods locally and internationally. The employees of TIMA are encouraged to individually or as team to be engaged in honorary activities. This is realized by “time donations”. The longest regular honorary support is the sponsoring of mutual cultural understanding in the German – Malaysian relations, TIMA has fulfilled since 1996. In all UNGC activities we acted in honorary engagements to bridge and drive the 10 principles.

2014 we continued some honorary activities to foster the social cyber market SMEs partnership in AEC, Africa, Middle America and Germany.

2.19 TIMA Exertion of influence

TIMA strategies and structures in wealth development for enterprises depend on multilateral and bilateral relations in national game changing rules for partnerships, with dependency in international law, regionalization and national law. We anticipate risk for policy briefings and entrepreneurial strategies and guide partnership developments between german and international enterprises as game changer within our 6 doings based on the 10 UNGC principles, our TIMA conduct of business integrity and the TIMA individual spirituality with a Christian idea of man. All our contribution and donations in TIMA networks are transparent and listed.

2014 TIMA and members of the senior management serve as partner for game changing strategies and structures as personal or corporate to the global society and markets, being members of BKU, Economic Counsel Germany CDU, VDEH, VDI, BDI, BCCG, OAV/APA, NUMOV, IISI Japan, IAP Council of Biotechnology Malaysia, UNIAPAC and United Nations Global Compact.

2.20 TIMA Conduct in compliance to law

TIMA does not accept or act in any measurements, standards, systems and processes of illegitimate character or in corruption. In our code of conduct the TIMA rules and principles are described. We believe in our employees and management to walk the talk and their individual commitment to these rule. With transparency we assure within the senior management to control and be informed on all communications of progress.

2.21 TIMA business integrity in globalization

The privat independent entity TIMA International GmbH (TIMA – Transformation Integration Management Agency) and its senior management and partners are learning and serving to integrate the common goods of people in societies and markets. We are 2014 committed to share and exchange our individual entrepreneurial frameworks of doings with analysis on outcome and the alternatives of synthesis on final driving of opportunities for the most probable individual enterprise anticipation of game changes.

With evolutionary exploring and building of vanguard structures of partnerships we fulfil 2014 the key philosophies in a broader environment of enterprises partnerships at the bottom up and the top down perspectives in the pyramids of civilized nations and regions, to explore the global access to unlimited growth in an architecture as force for the good.

Within the architecture of a free social cyber market environment, the philosophy of individual strategies and personalized structures and autonomous enterprises in partnerships TIMA 2014 replace the black box on several bouquets of impacts by measurable sustainability and transparent spirituality. Entrepreneurial sharing the bouquets of impacts on the individual human social market face, impacts within the parameters in a matrix of intergenerational responsibility, impacts in a personalized environmental diversity approach on experience curves in global issues of common goods and impacts on the comprehensive updates on vanguard leadership in politics and economics, are respecting in the different regions, all categories of human power, spirituality and globalization drivers to change the bottom of the pyramid to the better, a business for peace.

2014, the president of TIMA since 37 years of professional life, mirrors the personal entrepreneurial learning curves to manage desires and dreams of people in societies and markets by enterprises, being a needle in a global haystack. But once generating comprehensive society and market contributions with serious obligations to quality, affordability and reliability, the shining of the public license to operate becomes the reality of an evolutionary Kingsway to a global hidden champion.

This is 2014 in new value networks the digital Kingsway the high speed structures of digital societies and markets turning wealth and work in a new game for all stake-

and shareholders in autonomous enterprises worldwide and a warning to look back in an successful but slow moving past and to a political reality not to underestimate the explosiveness or implosion forces of self-indulgent "Packardism", greed and gambling to all.

In Germany West after the World War II the accumulated learning curve for individual entrepreneurial German post war society and social market spirit successfully matched the modernizing of international work sharing to fit the leading role in international export markets with its employment and wealth in 2014. The centralized communist east after the re-unification faced the financial crisis and globalization competition and learned the harder way to manage the individual entrepreneurial competitive race in digital world.

2014 both federal parts of Germany head on eye level to a global measurable sustainability in sharing prosperity in entrepreneurial partnerships worldwide but the whole German society and the markets became sensitive to the importance of legal stability, peaceful growth and economic equilibrium.

TIMA designed 2014 the idea of leadership in humbly serving for SME statesmanship to finalize the 6 doings for exploring and puzzling strategies and structures of high speed flexibility in globalization to share, serve, guide and mediate between wealth and work in all levels and partnerships worldwide.

As mandated entrepreneurial drivers for independent individualized views, anticipating global, regional, national paradigm changes on multiple success factors of operations the management keeps in touch with local solutions, with personalized low complexity in human individuality, human safety and security by direct connectivity and contents in block chain technology and InNetMediation in the daily value networks operations as SME statesmanship model.

In legal and transparent partnerships TIMA stabilize the individual evolutionary concepts with functional specialists, managing director, board member, CEO of board, member of advisory board, chairman of advisory board in guiding mandates or as signatory in international and global issues, president of industrial entity or president of civil society,

The international advisory to TIMA Wealth + Work and advisory to primacy of politics will serve, guide and share solutions with entrepreneurs in public and private sector

in upcoming paradigm changes in the individual market and society. TIMA is game changer with international accepted strategies and structures for sustainability and social market development, for a reasonable contribution to better living of all in the globalization, with the 10 UNGC principles for measurable sustainability within an European framework of individual spirituality.

2014 New social market economy with international TIMA SME partnerships

The successfully proved frames of live and society correlative to sustainability, society and market are processed within social politics and basic elements of a political order without contradictions to market based economy principles.

2014 The general TIMA partnership frameworks approach for long was privileged in TIMA MNE integrative digital partnerships including selected SMEs, because of scale, legal, political, financial, human resources and material barriers in the factor cost.

The future of global human safety, regional human security and local human living in all TIMA strategies we anticipated, guided and shared since the New economy 1999 the upcoming paradigm changes in USA and within UNGC in societies and markets in digital and technology innovations on communications, finance, industry and trade, infrastructures and energy, changing basically the global face of economy.

Within the TIMA participation in the process to global harmonized systems by the 10 UNGC principles of sustainability TIMA anticipated the rise of global warming and the accelerated transformation in a new post climate change world order for all.

2014 we are heading to digital value networks sharing globally the innovation and circular economy. By turning intangibles in tangible outcome and central complexity in local flexibility the competitive digital business cost factors favor SMEs for partnerships. In the TIMA SME partnerships new customer – entrepreneurial relations privilege the economic benefits for wealth growth and monetize the entrepreneurial work flexibility and efficiency improvements globally at any place..

2014 TIMA anticipates the new SME partnership era sharing education, skill and knowledge in free autonomous entrepreneurial access to markets, free economic serious monetizing, capitalizing and marketizing within the access to free markets forces in digital value networks of work and wealth, claiming for free societies and

free individual spirituality in free social cyber market economies with free self induced growth in global cyber worksharing of automation.

The described fundamental paradigm change of the key economic business factors by the global economic frameworks within 2014 and 2018 caused by Climate change COP, multilateral rules of WTO, and the digital flexibility in society and market globally with 4.0 and IoT delivers the key game changer in the economic factor intensity, the key driver for SMEs to surpass all barriers of the past in new forms of shared value networks.

In all TIMA strategies entrepreneurs are the drivers of services and pillars of a new cohesion within frameworks for Primacy of politics in game changing education, safety and security, along with the responsible sharing in the capital shift of wealth for growth and work in partnering with civil societies to stabilize the desired Kingsway of economics in society and markets for the people and their public license to operate.

This is the playing field of TIMA also in 2014 in all strategies and structures for partnerships, from a SME entity up to the HGE in integer statesmanship and the game changing guidance with society and market customers.

The TIMA participation in the UN Global Compact and the UN sustainability corporate forum is the base for our principles, rules and code of conduct according to a measurable sustainability, as new economic factor in all our strategies and structures for a post climate change age with the global public license to operate.

2014 the Individual spirituality, permanent driver to integrity in culture of globalization,

“In the digital netted societies and markets within all value networks impacting to human living, human safety and human security the individual spirituality is a part of the human rights and of the human face in the environment of civilized developments with more entrepreneurial responsibility in economic sustainability”. Dato’ Dr. Achim Deja
President of TIMA International GMBH and DtMG e.V. New York UNGC Summit 2013, 20. September,

2014 the TIMA spiritual understanding of human responsibility in all societies and markets is the entrepreneurial contribution to create with services fair pathways for better living locally, nationally, regionally, globally on earth for all, avoiding with strategies a disaster warming of climate, and support with modern structures in

sustainability, the expansion of real value networks of clients in plurality and diversity for all.

The key measurable mix in a pillar for a cohesive architecture for better living of humans is the sustainability, transparency, and education in the local economy, to build and grow free societies.

Sustainability is the civilized frame between societies, transparency the civilized frame of sharing in value networks in free markets and free educations and sophisticated research the civilized frame of local innovation and circular economies driven from individual personality building and dispositive responsibility in subsidiarity as a cornerstone of free societies.

2014 European option in global sustainability by local individual spirituality

The European fundamentals of spirituality in the human face of entrepreneurial responsibility have been a serious driver and part of the last 15 years to develop a global approach for our doings as TIMA International within the UNGC.

Within the inter-generation fairness and legal obligations between the societies and markets the autonomous entrepreneurial responsibility is part of a new world order as eminent driver to free mankind based on law above power to balance ecology with socio-economy in measurable sustainability.

The individual spirituality (1) in the Christian Idea of Man with the human personality as “origin, medium and object” of all institutions and in all processing situations guides the caring for climate change and bio-diversity, against unidirectional escalating human interest, to balance in measurable sustainability for all (2/3) and to adjust the framework of living for the inter-generation fairness with the society promise of the social market objectives (4). The evolutionary transfer of social market processes in the digital global social cyber market for responsible work and wealth partnerships (5) includes the comprehensive sharing of entrepreneurial contributions in competence (6) for game changing innovations in the environment of human living, human safety and human security of all in the common spheres of influence in markets and societies (7/8). The framework of freedom, creativity and performance is part of the autonomous entrepreneurial responsibility and legitimated in the constitutional law of Germany.(9/10)

With serious humbleness TIMA individually care on 2000 years of cohesive religious force within the Christian plurality united in the Holy Trinity. The individual spirituality is a basic root and right of humans in Europe led and impacted by Catholic and Lutheran social teaching, guiding at the long pathway of peoples living environment.

The frame of human law above institutional might in the first occidental order 1648 in Osnabrueck, the right of individual spirituality in Prussia 1740 and the cohesive international Christian force of politics for the liberty of social market economy in the destroyed Germany after 1949 and in the re-unification 1989 are just some flash lights of lasting importance or as disruptive force in exceptional historic moments for the refugee integration after world war II, the re-unification with the east, financial rethinking and entrepreneurial behavior to avoid volatile or latent crisis situations in European societies.

To anticipate the better for tomorrow with the obligations to law, international sustainability and individual spirituality, TIMA anticipates the momentum to face the

cyber economy frame with business integrity, connecting the diverse living environments of all human beings and cultures in all markets and societies with an individual Christian spirituality for social cyber market responsibility and global measurable sustainability.

With this Christian entrepreneurial perception the digital game changing for sustainability in all society and market will favor a social cyber market economy for all to meet the needs of the present without compromising the ability of future generations to meet their needs.

2014 - TIMA and the momentum of change and opportunities

The opportunities of the digital change in society and markets rise with common access to wealth, work and education for innovative completeness, dispositive abilities and individual personality in a stable frame of freedom.

The pure impact of new digital economy's factor intensity on performance attractiveness in clean innovation and circular economy is an irreversible driver for economic change since long, heading now in a new dimension to fit the post climate change architecture for local better living worldwide with changed logistics and financial services to match local up scaling of value networks for all.

In the long term change of technology, following a circular and innovation driven economy, also the logistics trading mix will globally serve new structures for up stream high end local skilled finishing close to the customers and a down stream new and circular materials distributions to the new industrial up stream centers in all continents and coastal areas of rising importance. This causes the fundamental game changing for new opportunities of logistics within the sustainability factor intensity. The new monetizing of wealth with unlimited efficiency in digital netted structures by the bitcoin development replace traditional risks of competition and establish new security aspects on maritime and continental material flows..

The advantages from different factor intensities by the digital entities surpass all limits in the worldwide existing economies, also in the traditional northern European and German social markets potentials : aside of the short notice global upscaling, and new dimensions in ROI in capital and wealth developments, two historic paradigm changes in market flexibility and monetizing the growth of value networks are taking place in reality.

The first historic game changer of market flexibility are significant in all corporation networks by the inversion in autonomous proactive customers relations . This is part of the entrepreneurial game changing to increasing importance of subsidiarity and centers of local partnerships with sophisticated robotized production for high speed local flexibility and entrepreneurial high end innovations close to the customer worldwide. The new entrepreneurial sharing in value networks is the contribution to new personalized relation between enterprises and clients .

The second historic game changer is capital shift to the value creation as wealth driver by monetizing in a globalized currency of bitcoin, driven by selected sustainability parameters for completeness to avoid blow effects, casino bets and politics of privilege with pretended gaming risks.

Witin this general frame the race between all existing economies and their philosophies can realise remarkable and profitable improvements and will be celebrated by politics even as “succesfull failures”, as it is economically more attractive than all present systems.

The 2014 TIMA SME Partnerships strategies and structures:

The TIMA SME Partnerships turn around all factors in local growth with the ability to be pushed to deliver in the highest speed in all potentials of digitalized social cyber market economy with the TIMA global local SME partnerships. This will empower the employment in base of the pyramid on rural and city level stabilizing even the largest societies in a high speed innovation and circular partnership of global economy with the sustainability factor. Within the free SME Partnerships frame by law and individual spirituality the local living environment improves.

All TIMA SME partnership strategies for Wealth and Work have the perception of outperformance. As the game changer to the local social cyber economy they intensify and foster the individual personality of everybody and an autonomous entrepreneurial momentum for free society within regional regulation framework and a spiritual option for integrity.

Entrepreneurial charisma and responsibility within their individual spiritual cord in activities drive the common goods and participate in the sustainability of society. According to the digital high speed even the smallest SME Partnership is part in the economy architecture of the future transferring post-colonial and post-imperial

mankind in the post climate warming age with unlimited new opportunities for all by digital societies and markets of globalization.

Digitalized societies and markets on their Kingsway to sustainability with new entrepreneurial responsibilities

TIMA core business is to design and share strategies, structures and game changing opportunities to build worldwide successful partnerships for local prosperity

TIMA contributes as game changer and driver to personality building and subsidiarity within the measurable framework of the 10 UNGC principles for global sustainability architecture , individual spirituality in integrity for responsible business statemanship of autonomous resilient SMEs in partnership worldwide.

TIMA supports with family driven enterprises partnerships to match the social market forces on the bottom and the top of the pyramid in all local business worldwide as a force for the better.

TIMA complies with national law and international rights in ILO rules within strategies and projects we take a lead in all 10 UNGC pinciples and in the implementation of our code of conduct standards

In regular webinars and in future in serious gaming technics in the TIMA partnerships the stakeholders, shareholders and employment are guided to cross cultural integrity and business harmony with the 10 UNGC principles to realize measurable sustainability.

The non – discrimination precept is in charge in all entrepreneurial fields of influence by TIMA, with adequate payment and new opportunities for retirement provisions

All strutures of TIMA support flexible applikations to protect the families of employees and safety and occupational health as well as the participation of “angels” in partnerships

The qualification and human rights are a high ranking value in TIMA, according to our code of conduct and the European spirituality of a free individual personality . We regards this in our sphere of influence worldwide in related partnerships and value networks.

The local prosperity by SME partnership, is a skill and knowledge exchange success, a key driver for change in the TIMA strategies. The strengthening of peoples participating in better living in local prosperity is driven from growth and employment in SME partnerships with professional guidance.

Summary 2014

3. PRACTICAL ACTIONS AND MEASUREMENTS OF OUTCOMES FOR THE 10 PRINCIPLES

2014 the first TIMA SNME/MNE based strategy consultations for German enterprise partnerships with Malaysia Bioeconomy and German - Indian enterprises of the Indian UNGC networks in the maritime coastal areas of the Indian Ocean were shared, to participate the raising center of gravity in the region between Africa and South East Asia.

The UN Global Compact (UN GC) is a platform for encouraging and promoting good corporate principles and learning experiences in the areas of human rights, labor, environment and anti-corruption. The GC asks companies to embrace, support and enact 10 principles of conduct within their sphere of influence.

	The UN GC principles in partnerships for regionalization
Principle 1	Businesses in partnerships should support and respect the protection of internationally proclaimed human rights.
Principle 2	Businesses in partnerships should ensure that they are not complicit in human rights abuses.
Principle 3	Businesses in partnerships should uphold the freedom of association and the effective recognition of the right to collective bargaining.
Principle 4	Businesses in Partnerships should support the elimination of all forms of forced and compulsory labour.
Principle 5	Businesses in partnerships should support the effective abolition of child labour.
Principle 6	Businesses in partnerships should support the elimination of discrimination in respect of employment and occupation.
Principle 7	Businesses in partnerships should support a precautionary approach to environmental challenges.
Principle 8	Businesses partnerships should undertake initiatives to promote greater environmental responsibility.
Principle 9	Businesses in partnerships should encourage the development and diffusion of environmentally friendly technologies.
Principle 10	Businesses in partnerships should work against corruption in all its forms, including extortion and bribery.

The Global Compact's ten principles in the areas of human rights, labor, the environment and anti-corruption enjoy universal consensus and are derived from:

- The Universal Declaration of Human Rights
- The International Labor Organization's Declaration on Fundamental Principles and Rights at Work
- The Rio Declaration on Environment and Development
- The Nairobi SDG's Report – the post-2015 development agenda and sustainable Development Goals
- The United Nations Convention Against Corruption

3.1 HUMAN RIGHTS AND LABOR STANDARDS (PRINCIPLES 1-6)

Progress

Respect for human rights and fair labor standards have been part of the corporate culture, a culture that TIMA GmbH and its staff live on a day to day basis. This is also formally reflected in our Business Guidelines. Those guidelines are mandatory for all our employees and business partners. We seek to promote these values in our sphere of influence.

Through participating in the process of defining and developing standards started within the ISEAL since 2012 we have been able to offer tailored solutions to our clients in partnerships on trade, manufacturing and services thus ensuring best of communication in our key doing for implementing our “Quadruple A” strategy for partnerships, combined with “SustainMan”, on managing climate risks in value chains and “globalCon” to manage economic risks in partnerships and “InNetMediation” for value networks to reduce financial risks of partnerships.

TIMA International has aimed at and will further strengthen the UN Global Compact's credibility by developing core economic business models with explicit consideration of human rights and labor standards in changed paradigms of digitalized and virtualized global work sharing in financial, industrial, scientific, civil, defence and political services to better living of human beings.

Beyond learning from further international projects in Europe, Asia, Latin America and Africa also within the UN GC Partnerships and National Networks (Europe, Asia, Africa, Latin America, North America, C4C, Water Mandate, Sustania, B4P, UNEP, UN DASA, UNCTAD), the Senior TIMA Management in 2014 used its own and its client's knowledge and experience for developing a framework proposal for common business rules in the process for family driven partnership, by German social market economy principles for tailored modernization of all society sectors within the local primacy of politics in areas of interest for better living.

As regards progress on the principles 1 to 6, TIMA promoted the UN GC Women's principles to let women shine by proved and measurable increase in responsibility in all society to business, market to business and machines to business within the innovation economy of the future. Within the TIMA general commitment to advance gender equality, TIMA promulgated this goal both in its own presentations and strategy proposals for its clients and by sharing experience of Multi-diversity-management with a deliberate strive for gender equality essential for

sustainable development and success of any company with multicultural human resources and cross cultural value networks has been pushed forward within TIMA as well as in our projects with our clients.

Finally, all TIMA Society, Market and Machine to Business Partnership strategies for the emerging regional economies include inclusiveness and the importance of local stewardship in society, markets and business, as well as respect and protection of human rights standards on the way towards measurable improvement.

3.2 ENVIRONMENTAL STANDARDS (PRINCIPLES 7-9)

Progress

Throughout 2014, TIMA continued to follow UN Secretary General Ban Ki Moon's special appeals to support UN efforts for sustainability and climate protection by working with national governments to adopt smart regulatory frameworks, to forge a global policy framework, to reward environmental and social performance, to support the UN GC initiative on Climate Change, and by initiating or fostering autonomous business and investors' engagement for balanced global agreements. During the 2014 UN Corporate Sector Sustainability Forum, TIMA shared and exchanged as usual with UN GC participation its catalogue of partnership actions:

- ⇒ Striving for a coherent world with multilateral and cross cultural market connectivity and business content applications driven by TIMA digital partnership strategies;
- ⇒ Sharing and publicizing TIMA work sharing and value networks strategies for individualized pathways to prosperity through entrepreneurial partnerships and public – private services with local autonomous entrepreneurial leadership;
- ⇒ Sharing and promoting UN B4E skills and C4C mitigation and adaptation finance in all partnerships and strategies aiming to open access for all between regions;
- ⇒ Exchanging on innovations in partnership added values in society to society architectures with related strategies of partnerships in marketization, monetization, commercialization, regarding regional regulation and attractive global performance for a measurable sustainability shift ;
- ⇒ Promoting industry and trade strategies that enable and foster local matching with high-tech added values provided by skilled human capital in SMEs and networks in hidden champions, adding high-end engineering and service skill transfer for upscaling middle class in worldwide markets;
- ⇒ Sharing TIMA new trusted Partnership innovations for independent market flexibility driven by consumers in trade and industry, matching the personal desire of clients and the decentralized complexity through partnerships in zero time to market deliveries: paradigm changes in all business lines with autonomous and sophisticated society, market, machines to and within industrial subsidiarity communications, individualized and personalized infrastructure services, communities bundling for integrated partnerships with social, technical, and financial data providers, global connectivity providers of human safety and security following private and professional individuals in societies and markets and services;

- ⇒ Developing new TIMA contributions for responsible partnership networks on life science, living and lifestyle to all.

We also had the privilege to participate in new opportunities and approaches to create industrial low cost down stream structures for competitive use of science and education intensive up stream value creations, with new large scale clean and green energy-mix in regional transformation and reengineered sectors surpassing old dependencies for local and international prosperity and growth. Finally we could prove the positive influence of partnership synergies to attract capital shift by decreasing capital factor intensity, material factor intensity and human factor intensity in increasing sustainability factor intensity with remarkable improvement for better living and stable wealth increase in SMEs partnerships per € invested.

Within TIMA we have:

- ✓ further developed and elaborated individual SME and MNE matching for European-Asian partnership projects;
- ✓ further detailed our sophisticated cross sector contributions, TIMA GlobalCon, TIMA SustainMan, TIMA InNetMediation for individualized transformation in high efficiency infrastructures for Worldwide Innovation Economy regardless on the actual status of a society.
- ✓ continued our campaign to reduce paper, water and energy consumption by minimizing printing, advertising, faxing and mailing and continue to efficiency increase with less consumption of oil, gas, coal or gasoline for heating, cooling, driving, traveling, smarter meetings and other consumptive impacts by offices and sales on CO2 emissions by modernized technology and smart paperless communication, and infrastructural changes in offices
- ✓ continued pushing forward our social performance initiative for a comprehensive mobility managing including office use, tele- and videoconferencing, rail, car, ship and airplane for TIMA internal and external communication in local, regional and transcontinental events, projects and business as usual with clients, in an approach that is fully introduced in 2015/16 with ongoing use of zero CO2 systems at national and international conferences;
- ✓ further continuously explored and shared options on industrial downstream and possible up stream strategies, structures and operations in all sophisticated environments for advanced use of partnerships in of organic and inorganic material, technologies with radiation, pressure and temperature or processes, for value networks in private, civil and public playing fields of innovation driven markets

3.3 ANTI-CORRUPTION (PRINCIPLE 10):

Progress

TIMA takes 2014 a firm stand against corruption. Mandatory guidelines for all our activities, especially our Code of Conduct Guidelines, are very specific on this subject. We have made such guidelines available on our website. In UNGC, we shared our strategy proposals and best practice examples related to the actual guidelines for Anti-

Corruption with the UN GC Anti-Corruption Working Group from Brazil, India and South Africa (Ethos, GC Network India, NBI).

TIMA shared experience with the Anti-Corruption Working Group and promoted ICMM and Transparency International Guidelines, in order to provide most current information and strategies for TIMA clients being involved in issues of eco-systems and circular economy in mining, coal, oil and gas, nuclear energy and energy intensive heavy industries.

4. INFORMATIVE LINKS

TIMA has relaunched its website where publications and further information on the topics and publications mentioned in this CoP 2014 can be found or are available via informative links.
