

LG Chem

2017
Sustainability Report

| About This Report |

Overview

LG Chem has published Sustainability Report every year since 2006. The 12th Sustainability Report outlines LG Chem's sustainability management activities and performance in depth.

Reporting Principles

This Sustainability Report complies with the Core Option in accordance with the GRI (Global Reporting Initiative) Standards which is an international guideline for sustainability reporting. Also, the report complies some of the principles and contents provided by IIRC (International Integrated Reporting Council). In addition, the report reflects the 10 principles of UNGC, ISO 26000, and core requirements of RBA (Responsible Business Alliance). The Financial information in this report complies with the standards of K-IFRS.

Reporting Period

The relevant period for this report spans from January to December 2017, and some of the major achievements include progress made until June 2018. To enable time series analysis, the report includes data of the previous three years (2015~2017).

Reporting Scope

The report covers the 13 domestic production plants in Yeosu, Daesan, Ochang, Cheongju, Osong, Iksan, Naju, Ulsan, Onsan, Gimcheon, Paju, and as well as the head office in Seoul and three technical research centers (Daejeon, Magok, Gwacheon). Overseas worksites include the following production corporations; 10 production corporations in China including LGCCI, LGCNJ, LGCNA, LGCTJ, LGCBT, LGCBH, LGCBJ, LGCGZ, LGCYX, LGCCQ, LGCHZ, etc., LGCTW in Taiwan, LGCMI in U.S.A, LGCVH in Vietnam, LGCVZ in India, and LGCWR in Poland, etc (except corporations that were recently founded, initiated, or are currently in preparation during 2017). Economic data covers all consolidated companies. Some social and environmental data sets of a different reporting scope are separately indicated.

Independent Assurance and Additional Information

To secure reliability, Lloyd's Register implemented independent assurance based on the principles of AA1000AS (2008). LG Chem publishes Sustainability Reports in Korean and English. They are also available at LG Chem Website (<http://www.lgchem.com>).

Overview

- 02 Chemistry in Our Everyday Life
- 08 To the Stakeholders
- 10 Company Profile
- 12 Our Strategy
- 14 Our Business Models
- 16 Stakeholder Engagement
- 20 Materiality Assessment

Value Adding Activities

- 25 Innovation for a Better Future
- 35 Back to Basics
- 45 Protectiong Our Planet
- 51 Getting Engaged with Partners
- 59 Respecting the Employees
- 65 Giving Back to Communities

Performance

- 73 Financial Performance
- 75 Non-financial Performance
- 80 Business Performance and Strategy

Appendix

- 87 Corporate Governance
- 89 Business Ethics
- 92 Risk Management
- 94 Independent Assurance Statement
- 96 LG Chem Code of Conduct for Suppliers
- 98 Sustainable Management Index
- 101 Association and Principle
- 103 Awards and Recognitions

Polycarbonate for Light and Durable Lens

Polycarbonate (PC) is an engineering plastic, a high-quality plastic that is mainly used for industrial products and is stronger and lighter than general plastics. It is transparent and resistant to impact and heat.

PVC for Diary Cover

The cover of planner is made of synthetic leather to make it feel more like genuine one, and Polyvinyl chloride (PVC) is used for making synthetic leather. PVC is one of the most widely used thermoplastics and its properties, such as robustness or durability, can be changed as necessary according to the types of additives mixed during the processing process.

Lithium-ion Battery, Extending Battery Life of Laptop

In the rechargeable battery, lithium-ions move between cathode and anode to produce electricity. The battery is used for a variety of devices such as smartphones and laptops as it has characteristic of high energy density and high output, etc.

Polarizer for High-definition Monitor

As one of the key materials that constitute the Liquid Crystal Display (LCD), this optical film, polarizer, transmits the light emitted from the LCD's backlight in a single direction while blocking the light coming from other directions.

ITO Film, Actualizing Touch Screen of Smartphone

Touch screen panel is a multi-layered input device. Users touch the screen to select options with their finger or a pen, and then associated hardware and software determine and send the location of the press to the system. The Indium Tin Oxide (ITO) Film, used for tops and bottoms, is a core material of touch panel.

PSA for Post-it with Re-adherable Strip of Glue

Pressure Sensitive Adhesive (PSA) is an acrylic adhesive which comes in two types: water-based for labels and advertising materials and oil-based for optical films.

Creating New Innovation

LG Chem's products are almost ubiquitous in our daily life. Most electronic goods and office supplies, such as smartphones, laptops, credit cards, post-its, and lens of glasses, are chemical products. These chemical products benefit our society and create new ideas.

Apart from its existing business of making petrochemical products, LG Chem has entered into a number of whole new businesses by taking on a series of challenges. The Company will do its best to make a better and brighter future for humanity with businesses for the environment, such as water, biotechnology and energy, etc.

Making Smart life

It is no exaggeration to say that every material in the world is composed of elements. Air, water, and soil, which constitute the natural environment, are chemical substances. Proteins that make up our body and nutrients that we take are also chemical substances.

The development of chemistry has resulted in numerous compounds. And these new materials have played a critical role in the development of humanity. Most of the necessities in our life are made of chemical substances, which implies that they are an integral part of modern life.

Utilizing the limitless possibilities of chemical substances, LG Chem has developed a variety of chemical products that are used as materials for children's toys, clothes, OLED TV, and ESS, and make our life more convenient.

ABS for Developing Imagination of Children

Acrylonitrile-Butadiene-Styrene (ABS) is a highly-functional plastic known for its strong heat resistance and impact resistance. It is highly processable and can be manufactured in various colors

Base of Insulating Material

Expanded Polystyrene (EPS) is comprised of a large amount of air layers. Due to this characteristic, it has thermal insulation, impact absorption, water repellency, and sound insulation properties.

PVC for Silk Wallcovering

PVC wallcovering can be manufactured in various designs, lasts longer than synthetics, is resistant to stains, and used for water-proofing and thermal insulation

Caustic Soda for Uniform Dyeing

Caustic soda, also known as sodium hydroxide, is used to eliminate impurities and also to brighten cotton fiber or improve the process of dyeing. Its aqueous solution is colorless and odorless and highly alkaline.

OLED, Realizing Ultra Definition TV

OLED TV can realize ultra-fine picture quality and produce colors comparable to the natural ones. Also, it can provide the same color quality at any viewing angle.

Lithium-ion Battery, Supplying Power for Drone

Drones need batteries that supply power so that they can operate wirelessly. Lithium-ion batteries are used for drones because they are light and have a high energy density but no memory effect, which means they last a long time.

Polyester for Sports Clothes

Polyester is a synthetic fiber derived from petroleum, etc. It is a polymer, or a long chain of repeating chemical units. Since it does not absorb moisture, it resists shrinking and does not stretch out of shape.

SBR for Shoes Material

Styrene Butadiene Rubber (SBR) is a synthetic rubber made by performing low-temperature emulsion polymerization on styrene and butadiene. Compared to natural rubber, SBR boasts uniform quality and excellent heat/wear resistance. It is widely used to manufacture tires, shoes and industrial goods.

PVC for Durable Football

PVC (Polyvinyl Chloride) is one of the most widely used thermoplastics and its properties such as robustness or durability can be changed as necessary according to the types of additives mixed during the processing process. Thanks to these characteristics, PVC is extensively used in a variety of areas from sporting goods to household commodities.

EVA for Sole of Shoes with Elasticity

Ethylene Vinyl Acetate (EVA) is a copolymer of ethylene and vinyl acetate monomer. Its elasticity, heat sealing temperature, durability and permeability vary depending on the content of vinyl acetate monomers. It is used in a variety of areas from value-added products such as photovoltaic sheets to shoe soles, life vests, and more.

Fostering Active Future

Work-life balance has become an important factor that decides the quality of life in present society. With increasing leisure time, the demand for sports equipment, smart mobility, and drone has also been growing.

These changes in lifestyle have led to the utilization of various chemical products. Sporting goods are mostly made of chemical substances, and functional sports clothing and equipment made of new materials are drawing much attention.

Smart mobility, such as electric bicycle, electric wheel and electric scooter, is an eco-friendly means of transportation using electric power and has become very popular for leisure activities in recent years. Also, drone, an unmanned aerial vehicle, is making a sea change in our daily life by being used in shooting photos and videos, delivering goods, collecting information, and helping agricultural activities. These electronic goods need light but powerful batteries with high power density. Our IT & New Application batteries are being used for smart mobility, drone, etc., and we will contribute to enrich everyone's lives with the advancement of chemical technologies.

Lithium-ion Battery, Supplying Power for Environment-friendly EV (Electric Vehicle)

Medium and large-sized lithium-ion battery that is used to supply power to electric vehicles. Boasting lightness thanks to the 'under-floor pack' technology, applying the Stack & Folding method that increases energy density by maximizing the use of internal space, changing shapes according to vehicle designs, and utilizing pouch-type that provides no explosion hazard.

Lithium-ion Battery, Key Material of Electric Bike

Electrically powered and easy-to-use electric bicycles are eco-friendly and recognized as a next-generation vehicle. The replacement of lead storage battery with lithium-ion battery has enabled electric bicycles to reduce their weight and size.

To the Stakeholders

Dear Stakeholders,

I would like to extend my deepest gratitude to all of you for your continued interest in and support for LG Chem.

Last year, LG Chem achieved the highest performance since its foundation, with sales of KRW 25.698 trillion and operating profit of KRW 2.929 trillion, despite the uncertain business environment, such as prolonged low growth and rising protectionism across the globe.

In the Basic Materials & Chemicals Division, we achieved strong sales performance by reducing costs and expanding high value-added businesses. In the Energy Solutions Division, we turned a profit thanks to the sales growth of automotive battery and ESS (Energy Storage System) battery and the improvement of business structure of IT and new application battery. The IT & Electronic Materials / Advanced Materials Divisions also saw an increase in sales and profitability through the enhancement of product competitiveness. In particular, the merger with LG Life Sciences following the takeover of FarmHannong has enabled us to begin the red bio business, and we solidify the foundation of the red bio business and elaborate the future growth strategies and action plans of the bio business.

In the coming years, we will have a lot of challenges ahead in the business environment, such as rising protectionism across the world and increasing price volatility of major raw materials including oil prices and exchange rates. In addition, there will be a stronger need for corporate social responsibility than ever, including mandatory disclosure of CSR information and responsible management of supply chains, all over the world.

LG Chem will put effort to prudently overcome the crisis and take full advantage of this opportunity. We

will resolutely eliminate old practices and enhance the business structure, strengthen the compliance with quality standards and safety and environmental management, and fulfil the social responsibilities as a corporate citizen, so as to possess ability to secure competitiveness in the changing global business environment.

“We will provide differentiated customer value through enhancing the business structure.”

We will continue to pursue the bio-growth strategy that we have been pursuing since last year, and actively discover and promote new businesses in the fields of energy, water and inorganic materials. In the existing core businesses, we will make thorough preparations to maintain high profits and secure fundamental competitiveness. Especially, as the scale of investment and number of global businesses increase for the expansion of high value-added businesses and the response to orders for automobile batteries, we will make every management decision based on "value".

While building capacity for the improvement of R&D productivity at LG Science Park, we will aggressively expand open innovation with other organizations. Moreover, we will strive to comprehend the current level of our manufacturing competitiveness and management system and to implement relevant tasks for innovation.

“LG Chem is fully committed to growing together with society and putting customer value first.”

“We will comply with stringent quality standards and enhance safety and environmental management activities.”

We will manage the quality of products and safety and environment, which are the basis of customer trust, without making any mistakes or compromise. We understand that even a single accident can destroy the foundation of business, and thus we will continuously foster the corporate culture of complying with established standards and principles.

“We will become a company that coexists with society.”

As a corporate citizen, we will conduct a variety of activities to achieve ‘mutual growth’ beyond ‘social contribution’. We will strive to establish a healthy ecosystem where we can grow together with our partners while maximizing values in economic, social and environmental aspects and transparently disclosing our efforts and achievements to stakeholders, such as customers, shareholders and investors, suppliers and local communities.

LG Chem has grown constantly for a long time of 70 years thanks to numerous economic and social players who have been with us as well as our own efforts.

We will do our best to conduct every business activity in a fair and transparent manner and meet the expectations of customers and society. I ask for your continued support and encouragement.

Thank you.

June 2018
CEO and Vice Chairman of LG Chem

Company Profile

As the country's representative chemical company, LG Chem has established a global network for production, sales and R&D, and provided products with global competitiveness. Under the vision of 'A Global Leader that Grows Together with Customers by Providing Innovative Materials and Solutions', LG Chem will fulfil its social and environmental responsibility throughout the whole process of management.

Company Status

Company Name	LG Chem, Ltd.
Headquarters	LG Twin Tower, 128, Yeoui-daero, Yeongdeungpo-gu, Seoul, South Korea
Foundation	January 1947
Employees	29,438 (Korea 16,810, overseas 12,628)
Revenue	KRW 25,698 billion
Net Income	KRW 2,022 billion
Total Assets	KRW 25,041.2 billion (Capital KRW 16,338.6 billion, Liabilities KRW 8,702.6 billion)

* As of December 31, 2017

Business Areas

Our businesses consist of Basic Materials & Chemicals, Energy Solutions, IT & Electronic Materials, Advanced Materials, and Life Sciences. By selecting and promoting 'Energy/Water/Biotechnology' fields as new growth engines, we are laying the foundation for sustainable growth.

<div>Basic Materials & Chemicals</div> <div></div>	After going through the process of crude oil refining and cracking, ethylene and propylene, which are basic raw materials of petrochemicals, are produced and used to manufacture the materials of plastics that we use in our daily life, such as PE, ABS and synthetic rubber.
<div>Energy Solutions</div> <div></div>	Automotive batteries for eco-friendly electric vehicles, ESS batteries for renewable energy storage, and IT & New Application batteries for smartphones and laptops are manufactured based on lithium-ion battery technology to provide energy solutions.
<div>IT & Electronic Materials</div> <div></div>	High technology-intensive materials that are unseen but play a key role in completing final products, such as materials for displays, semiconductors, and automobiles. In addition, RO membrane, a water treatment filter, is utilized in providing a variety of high-quality products to secure clean water.
<div>Advanced Materials</div> <div></div>	Display materials and rechargeable battery materials were spun off as a separate business unit. Active investments and R&D activities are being carried out to secure material source technology in the display and battery fields, which are the new industries of the future.
<div>Life Sciences</div> <div></div>	LG Chem merged with LG Life Sciences in 2017 and Life Sciences is considered as a future growth business which is to be promoted in mid to long-term. Life Sciences secure competitive edge in the biotechnology market based on superior technology and R&D capacity in terms of medicine, vaccine and fine chemical.

Shareholder Status

* As of December 31, 2017

LG Chem currently operates a global network of 31 manufacturing plants, 15 sales subsidiaries, 5 representative offices, and 4 R&D centers in 16 countries. Key manufacturing plants are located in Korea, China, Taiwan, the U.S, Poland, India and Vietnam, and R&D centers at home and abroad promote the development of core technologies and next-generation products.

Our Strategy

LG Chem's sustainability management covers all management activities in alignment with corporate strategic directions. Based on its management philosophy 'LG Way', the Company strives to achieve its vision and promote sustainability management.

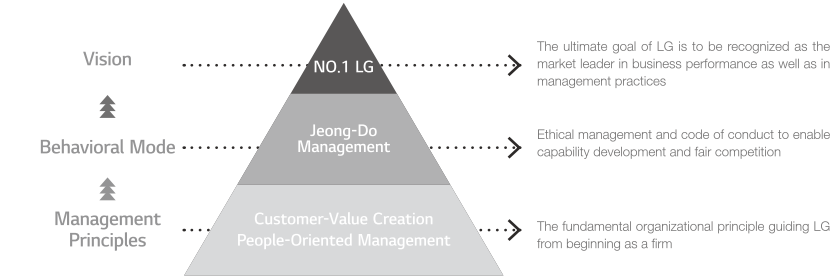

LG Chem's Vision and Core Values

LG Chem practices the 3 Shared Values – 'Customer Value Creation', 'Strong Implementation', and 'Mutual Respect' to achieve its vision, 'A Global Leader that Grows Together with Customers by Providing Innovative Materials and Solutions'.

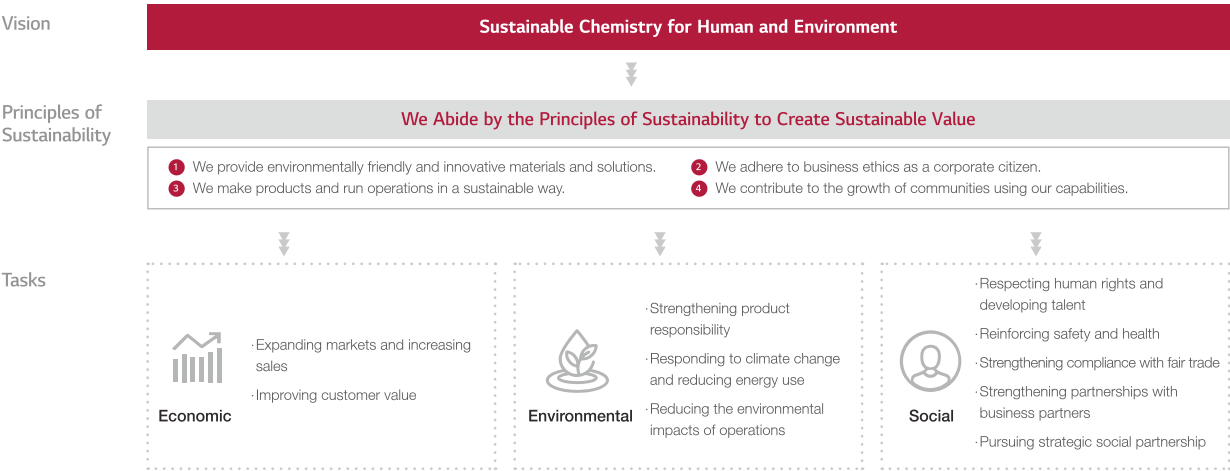

LG WAY

LG Way is the way how LG employees think and act. We promote the corporate management philosophy 'Customer Value Creation' and 'People-Oriented Management' based on the code of conduct 'Jeong-Do Management' to achieve the vision 'No. 1 LG'.

Sustainability Management System

Under the vision of 'Sustainable Chemistry for Human and Environment', LG has promoted sustainability management based on 4 principles and 10 key tasks in the areas of economy, environment, and society.

Sustainability Management Aligned with SDGs

As a member of UN Global Compact, LG Chem actively supports the Sustainable Development Goals (SDGs). LG Chem will contribute to the sustainable development of the world through aligning its business with the SDGs.

Our Business Models

INPUT

VALUE ADDED BY LG CHEM

OUTCOMES OF BUSINESS

Economy

- Financial Capital
- Domestic and overseas economic condition
 - Response to governmental regulations
 - Assets (capital)
 - M&A
- Manufactured Capital
- Domestic and overseas operations
 - Manufacturing facilities
- Intellectual Capital
- Core technologies
 - Intellectual property rights, patents

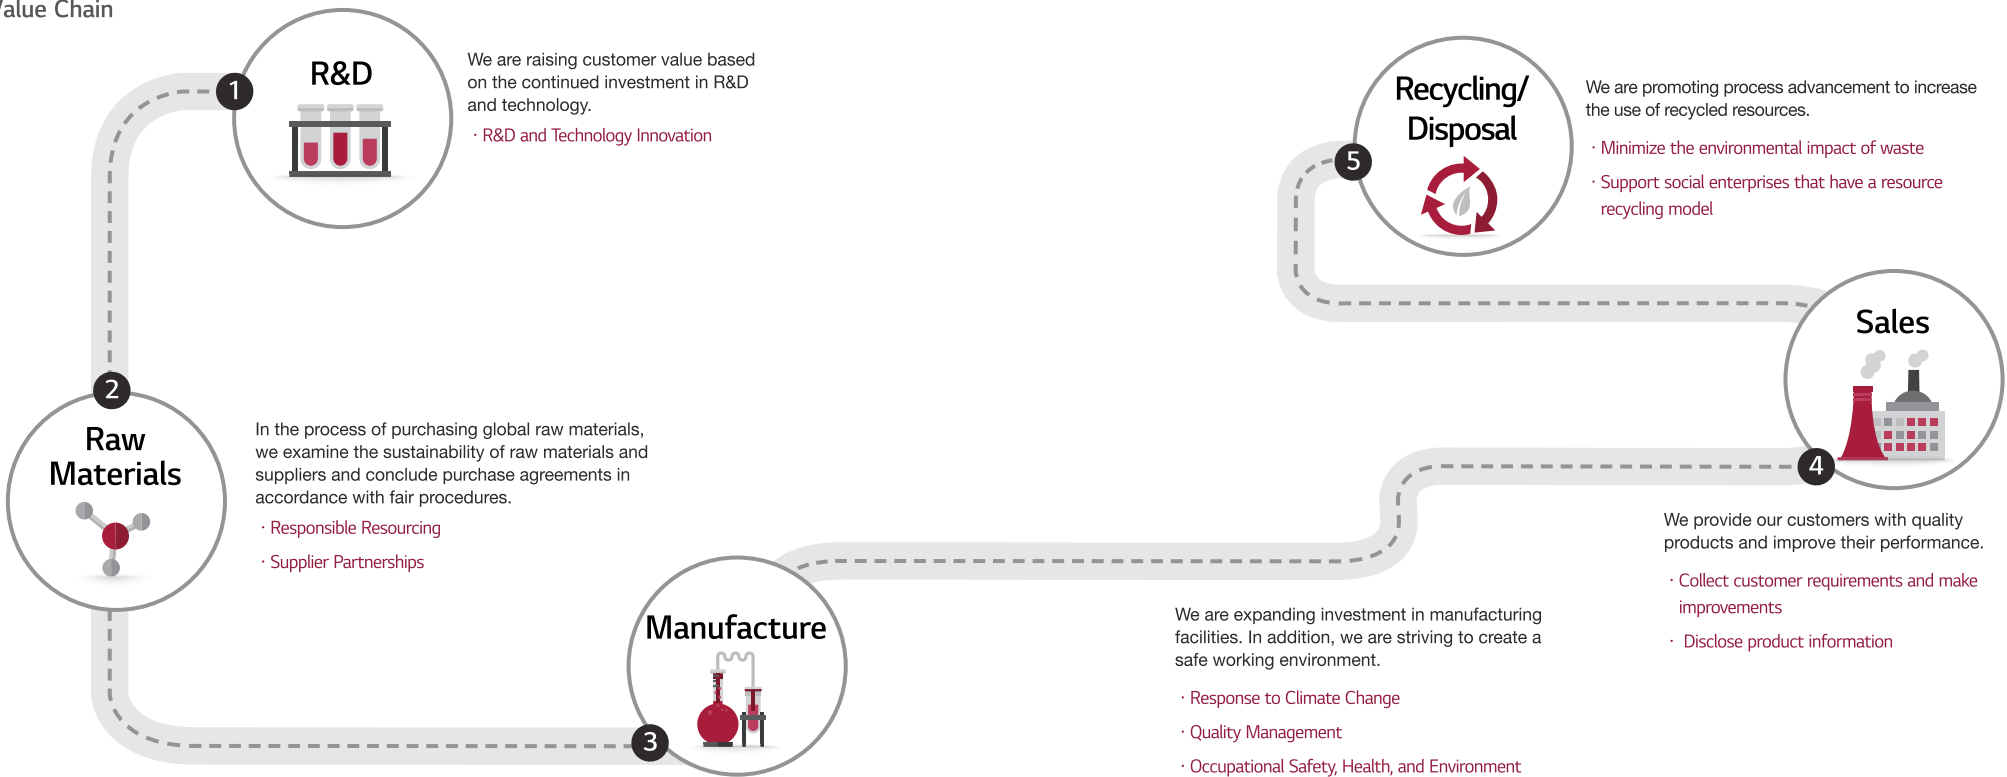

Environment

- Environmental Capital
- Natural environment
 - Energy/water/electric power, etc.

Society

- Human Capital
- Professionalism of employees
 - Vocational experience and capabilities
 - Ethical awareness
- Social Capital
- Local community
 - Government
 - Customers
 - Supplier

Value Chain

Economy

- Corporate tax KRW 541.9 billion
- Shareholder and investor dividends KRW 460.1 billion
- Securing 46,976 patents in Korea and overseas
- The percentage of new products in total sales 35.1%

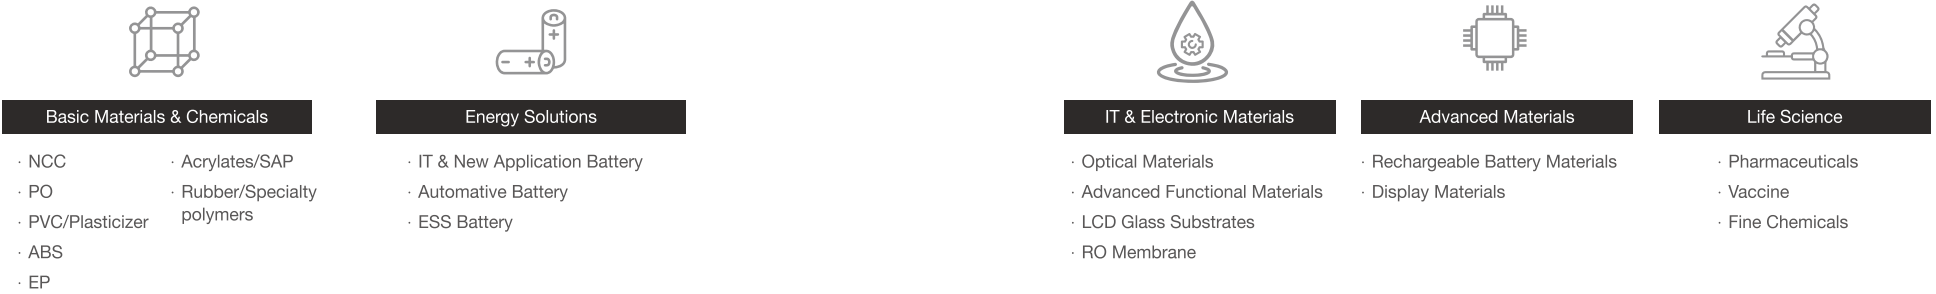

Environment

- GHG emissions intensity 0.454 tCO₂-eq/product ton
- Environmental investment KRW 41.4 billion
- Energy saving KRW 55 billion

Society

- Community investment KRW 36.3 billion
- Injury rate 0.23%
- Purchase from suppliers KRW 13,080 billion
- Annual wages of employees KRW 1,508 billion
- 1,151 of new jobs created

Business and Product

Stakeholder Engagement

LG Chem communicates with stakeholders thorough operating a variety of communication channels. The collected opinions are reflected in management policies, and share the outcomes with stakeholders.

Stakeholder Communication Channel

LG Chem communicates with direct and indirect stakeholders including shareholders & investors, customers, employees, suppliers, NGOs and local communities, academia & experts, industrial associations and organizations, media, and government agencies. While regularly communicating with its key stakeholder groups, such as shareholders & investors, customers, employees and suppliers, the Company listens to their objective opinions regarding its major business activities and sustainability management.

Stakeholder Groups	Expectation	Communication Channel
Shareholders & Investors	<div></div> <ul style="list-style-type: none">· Long-term growth· Creating and distributing profits· Transparent disclosure	<ul style="list-style-type: none">· Corporate presentations· General shareholders' meetings· Financial information disclosure· Credit ratings
Customers	<div></div> <ul style="list-style-type: none">· Open communication· R&D capabilities· Improving product quality and safety	<ul style="list-style-type: none">· Collecting customer feedback· Product liability monitoring
Employees	<div></div> <ul style="list-style-type: none">· Improving the corporate culture· Cooperative labor-management relationship· Promoting employee benefits· Reinforcing employee safety and health	<ul style="list-style-type: none">· Employee satisfaction survey· Labor-Management Committee· Company magazines· Safety and Environmental Committee· Employee Committee· CSR Committee
Suppliers	<div></div> <ul style="list-style-type: none">· Supporting suppliers and providing training· Fair sharing performance with suppliers	<ul style="list-style-type: none">· Shared Growth Committee· Business and technical support programs· Supplier presentations
NGOs & Local Communities	<div></div> <ul style="list-style-type: none">· Strategic social partnerships· Local CSR activities by overseas subsidiaries· Investing in local communities	<ul style="list-style-type: none">· Listening to opinions such as survey· Cooperation in region where CSR activity takes place
Academia & Experts	<div></div> <ul style="list-style-type: none">· Industry-academic cooperation· Technological development	<ul style="list-style-type: none">· Consultation· Joint R&D activities
Industrial Associations & Organizations	<div></div> <ul style="list-style-type: none">· Responding to new regulations· Chemical management	<ul style="list-style-type: none">· Councils and forums on sustainability· Industry and businessrelated business associations
Media	<div></div> <ul style="list-style-type: none">· Creating and distributing profits· Technological innovation· CSR activities	<ul style="list-style-type: none">· Informal press meetings

Stakeholder Opinions and Responses

LG Chem listens to the opinions of stakeholders through diverse channels including meetings and surveys. The key opinions among those suggested at the meetings are reflected in the management activities, and the results and follow-ups are included in the sustainability reports.

Listen to Stakeholders' Opinion

<p>“ Product sustainability is important for sustainable development.</p> <p>In recent years, product social responsibility as well as product quality have become more important than ever. Accordingly, both LG Chem and its suppliers need to have a sense of responsibility for the entire supply chain from raw material mining to finished battery products. We need to strive to reduce the environmental impact, such as carbon emissions, air pollution and water use, in all production stages, and to comply with all due diligence rules in accordance with the assessment of child labor and human rights violations in the supply chain. ”</p> <p>Customer</p>	<p>“ LG Chem is required to manage risk while growing its business.</p> <p>To secure future growth engines, LG Chem is implementing energy, water, bio businesses. If the diversification of LG Chem's business portfolio brings changes in the scale of profit, it will have a positive effect. When it comes to investment risks, the policy on raw materials, which are less affected by oil prices, needs to be consistently managed, and the transparency of management needs to be more enhanced to maintain trust from the public. ”</p> <p>Investment Institution</p>
<p>“ Supports for outstanding partners should be strengthened.</p> <p>LG Chem has been actively promoting mutual growth with its partners and programs for mutual growth are well operated. To foster cooperation culture, screening of suppliers need to be strengthened and policy for supporting the outstanding partners is needed. Also, the support program needs to be more actively promoted through communication channels such as meetings. ”</p> <p>Partner</p>	<p>“ We expect to see the continued CSR activity for youths and education.</p> <p>Through the Fun Chemistry Park program, we have developed a positive awareness of LG Chem's social contribution activities. Both schools and students are highly satisfied with the experiential science (chemistry) education contents that are provided in the form of outreach programs since individual schools are not capable enough to provide such contents. We hope to see the continued operation of the program with more participants in the future. ”</p> <p>Local Communities</p>

Commentary from Corporate Affairs Department Leader

“LG Chem identifies the expectations of stakeholders through diverse channels including meetings of stakeholders and reflects them in its sustainability management activities. Also, the identified issues are systematically managed in close cooperation with relevant departments and the results are disclosed in Sustainability Report. These efforts for communication and internal management will lay the foundation for LG Chem to emerge as a global leading chemical company. LG Chem will continue to promote sustainability management and create sustainable values in every business activity to fulfill its social and environmental responsibilities. ”

Meeting of Stakeholders

As part of the efforts to promote its sustainability management, LG Chem held '2018 LG Chem Meeting of Stakeholders' to identify sustainability issues which stakeholders put priority on. Experts in economy, society and environment were invited, and their opinions regarding the trends and directions of sustainability management were collected. Those suggested by stakeholders in the meeting will be reflected in LG Chem's management strategies and operations and also in sustainability reports.

Overview		
Date	March 28, 2018 (Wednesday)	
Location	Floor 31, Meeting hall, headquarters of LG Chem	
Participants	Chae-Ki Kwak, professor (Dongguk University)	Jin-Seong Kim, team leader (Korea Corporate Governance Service)
	Kyeong-Sin Kim, professor (Sungshin Women's University)	Jae-Seong Noh, research commissioner (Business Institute for Sustainable Development)
	Eun-Kyeong Lee, senior researcher (UN Global Compact Network Korea)	

Opinions from Stakeholder Meeting and Plan for Reflecting in Management

Key Opinion	Progress and Plan
1 Expansion of communication from the perspective of customers	· Explain to consumers about how LG Chem's products are used in finished products · Disclose safety and environmental issues from the perspective of consumers
2 Creation of environmental values	· Emphasize with subtitles in the report (e.g. company that creates environmental values) · Report on the environmental values of businesses with regard to business innovation
3 Creation of social values	· Highlight the creation of jobs for the youth, women, and the underprivileged in the section of long-term goals
4 Improvement of LG Chem's sustainability management	· Emphasize the connection between management strategies and sustainability management system, and examine LG Chem's social responsibility from the objective perspective by collecting the opinions of stakeholders

Subject

- Evaluation on LG Chem's sustainability management, and making up for the weak points
- Direction of LG Chem's sustainability management and social value that LG Chem should create

Chae-Ki Kwak, professor

One of the emerging issues in the chemical industry is safety. Although LG Chem's products are not directly delivered to end users, the Company needs to manage customer safety in a proactive manner. Along with this, the Company's business portfolio has been reorganized to focus on energy, water and biotechnology and thus created various environmental values. Also, the government has recently been focusing on the creation of social values. In this regard, LG Chem needs to increase investment in new businesses to create more jobs, and improve the quality of employment through the management of supply chains.

Kyeong-Sin Kim, professor

Considering the characteristics of its business, LG Chem should do everything possible to ensure complete safety of workplaces. It is positive that its sustainability reports highlight the EHS section. To become more trustworthy, LG Chem needs to reestablish its sustainability management strategies from a long-term perspective. To that end, the Company needs to execute quantitative measurements of economic, environmental, and social performance, and manage its management activities in alignment with the UN SDGs. Furthermore, employees also need to internalize sustainability management and have loyalty to the Company.

Eun-Kyeong Lee, senior researcher

In fact, LG Chem's sustainability reports have been significantly improved, in terms of reporting quality and system, by proactively reflecting the opinions suggested at the meetings of stakeholders. The reports would be improved even more if there were a clear explanation on how its energy, water, and biotechnology businesses are aligned with the UN SDGs. Since the UN SDGs are too comprehensive, the Company does not need to deal with every issue of them. Most of all, LG Chem needs to minimize negative impact and maximize positive impact on its business areas. Also, regarding the SDGs, the Company needs to focus on the issues with a considerable impact on its future businesses, and estimate the long-term KPI and impact.

Jin-Seong Kim, team leader

Although the BOD is considered as the main pillar of the Company, the sustainability reports have failed to show a clear connection between the BOD and business units. Since LG Chem has a stable ownership, external investors do not have much influence, which ensures a corporate stability but also means less external stimulus. Therefore, LG Chem might lag behind others if it does not change by itself. In fact, foreign investors put much emphasis on non-financial performance, such as environment and society, as well as financial performance. In this regard, LG Chem's sustainability reports need to show that corporate strategies are well aligned with sustainability management (e.g. the BOD deals with sustainability management issues in the long-term).

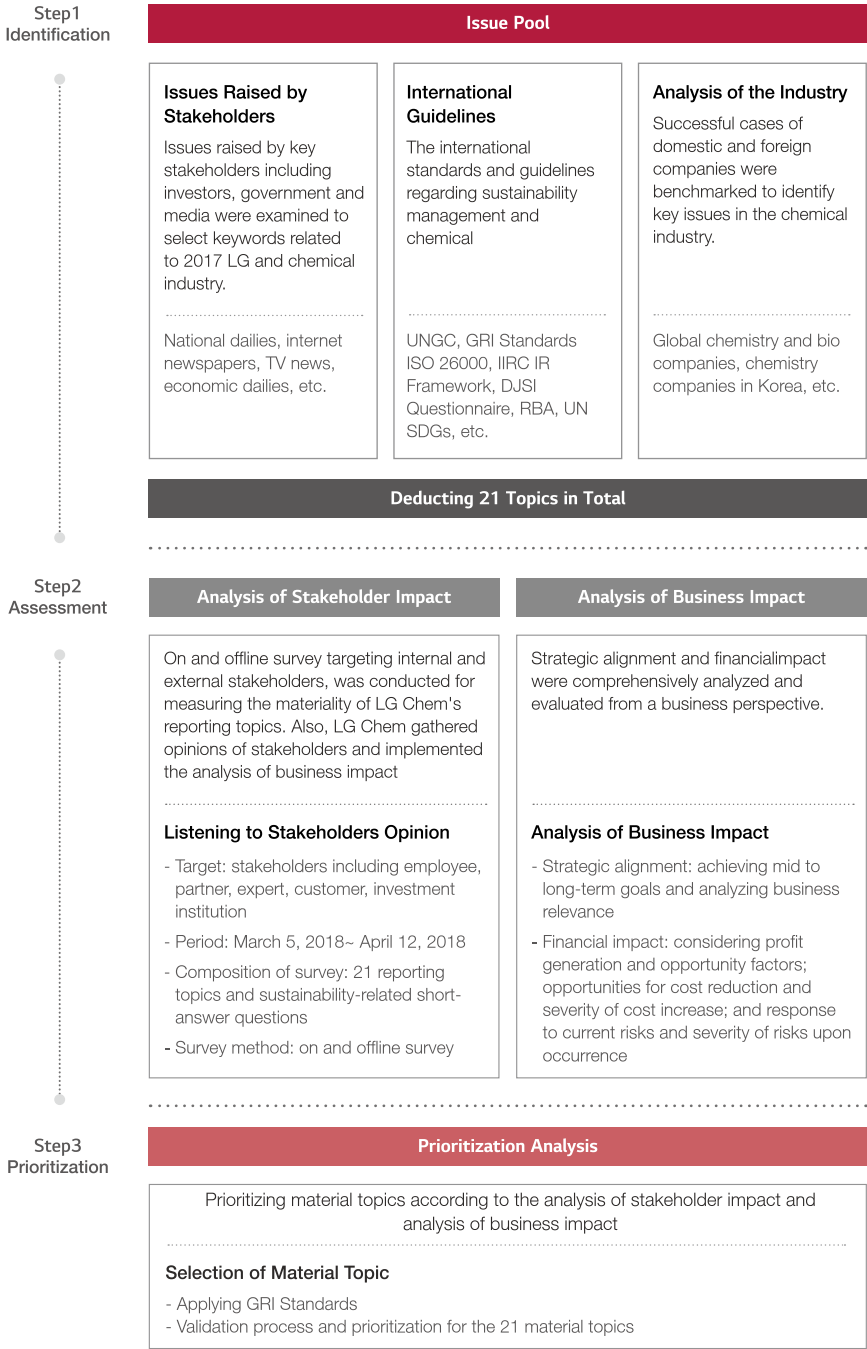

Jae-Seong Noh, research commissioner

Along with changes in its business portfolio, LG Chem has pursued to create environmental values by increasing energy efficiency and decreasing environmental load. In order to actively communicate with stakeholders on business directions, the sustainability reports need to be prepared in alignment with the SDGs and highlight not results but impacts on the society. Furthermore, LG Chem not only needs to comply with environmental laws and regulations; it also needs to take the lead in meeting non-legal requirements. Also, as a large energy user, LG Chem needs to make voluntary efforts to improve its workplace environment, such as use of renewable energy sources.

Materiality Assessment

LG Chem has conducted a materiality assessment to effectively reflect internal and external business environments and various expectations and interests of stakeholders in the sustainability management reports. The 2018 Sustainability Report was prepared in compliance with the guidelines on report content and format suggested by the GRI (Global Reporting Initiative) Standards. At the 2018 materiality assessment, stakeholders' influence as well as strategies and financial impact in the aspect of LG Chem's business were analyzed and reflected in deciding material topics. The process of materiality assessment is as follows:

Materiality Assessment Process

Result of Materiality Assessment

21 topics were deducted through matrix analysis which considers business impact and influence on stakeholder, and 9 topics were selected as LG Chem's material topic.

Topics	Report Category	Boundary		Report Page
		내부	외부	
1 Strengthening Core Capability	Innovation for a Better Future	●	●

INNOVATION FOR A BETTER FUTURE

To lead the chemical industry in the rapidly changing business environment, we concentrate our capacity on future growth businesses and reorganize our portfolio with a focus on high value-added businesses.

BACK TO BASICS

We put priority on product quality and safety and comply with domestic and international regulations on chemical substances. Also, we prevent potential accidents through fostering the safe working environment and constant management.

GETTING ENGAGED WITH PARTNERS

We promote mutual growth throughout the entire businessvalue chain. We support the growth and global competitiveness of our partners, and ensure responsible procurement of resources through supplier CSR management.

Value Adding

PROTECTING OUR PLANET

We are actively engaged in reducing GHG emissions to prevent environmental risks and manufacturing eco-friendly products to enhance our business competitiveness.

Activities

RESPECTING THE EMPLOYEES

Based on our management philosophy 'People-Oriented Management', we fully support the international standards for human rights and labor, and strictly comply with labor laws in every country and region of our business operation.

GIVING BACK TO COMMUNITIES

We make investments in local communities to increase social values. We are engaged in protecting the environment and resolving the issues of local communities, and also calculate the SROI by measuring the effectiveness of these activities for efficient implementation.

INNOVATION FOR A BETTER FUTURE

Industry Trends : Change & Response

As global trade protectionism is expected to grow higher than ever, the overall business environment is facing a bumpy road ahead due to increased volatility in oil prices, exchange rates and major raw materials prices. In particular, the increased volume of North American petrochemical products based on shale gas and the growth of the European and Chinese battery market will intensify the competition for orders.

When it comes to LCD and OLED materials, global technology leaders have been leading the market expansion, and the functional film and RO membrane market is also expected to keep growing for years to come. While demographical factors are affecting the biotechnology market, red bio is expected to maintain an annual growth rate of 6.5% due to the aging population and innovative life science technologies and consequential development of new treatments. The anticancer and immune disorder sector is especially leading the growth with active release of new drugs. The green bio market is continuously growing to deal with the risk of food shortage in the future. Genetic engineering technology and precision agriculture solutions are accelerating the growth of green bio market, and global entities are focusing on large-scale M&As, strengthening their market-leading positions and taking the lead in industrial innovations.

Strategy : Risk & Opportunity

LG Chem chose to fundamentally innovate its business structure and method to be a leader in the industry, not a mere survivor, in the fast-changing business environment. The Company has concentrated on future growth areas: energy, water and bio, and restructured its portfolio with a focus on high value-added businesses to enhance competitiveness. We have expanded our business portfolio to include 'green bio' (seed/crop protection), 'red bio' (medicines) and 'battery materials' through M&As with FarmHannong, LG Life Sciences and GS EM. In the long run, LG Chem is striving to be 'a company with strong fundamentals that can sustain a steady growth in sales and profits despite the rapidly changing and uncertain business environments'.

Evaluation

Improving Business Structure

LG Chem has established a company-wide growth strategy by designating energy, water, and bio as core future businesses, and raised competitiveness by restructuring its portfolio with a focus on high value-added businesses. The business portfolio has also been expanded to include green bio, red bio, and battery materials through M&As with FarmHannong, LG Life Sciences, and GS EM, respectively. We aim to be one of the 'Global Top 5 Chemical Companies' with a balanced business portfolio by 2025. To that end, we will expand new businesses to increase the sales of non-petrochemicals and batteries (including battery materials) to 40% by 2020.

Future Business Growth Strategy

LG Chem is fostering energy, water and bio as mid to long-term growth engines since these three areas are expected to witness an increasing demand owing to population growth in the future. We entered the green bio sector including crop protectants, seeds and agrichemicals through acquiring FarmHannong in April 2016 and red bio sector of medical treatments and medicines by merging with LG Life Sciences in January 2017. The red bio growth strategy is focused on developing innovative new drugs, and for green bio, we have selected Asia as our core market and are reviewing key focus areas and ways to build capacity. In 2017, we have invested KRW 575.5 billion which is 64,5% of the total R&D investment in future strategy sector including energy, water/air, bio, and next-generation new materials. We are also operating a corporate fund(strategy and open innovation) of KRW 120 billion to advance our business structure and nurture new businesses.

R&D Investment (Unit: KRW billion)

*Performance of FarmHannong and Life Sciences division are included in data from April 2016 and January 2017 accordingly.

Energy LG Chem, ranking 4th in the global electric vehicle battery market with an 8% market share, has an order backlog of approximately KRW 42 trillion as of 2017. Our electric vehicle battery production capacity was 18GWh in 2017, which we plan to enhance to 34-35GWh in 2018. Our electric vehicle batteries are currently being supplied to Hyundai Motors, BMW, Volkswagen, Audi, GM, Renault-Nissan Alliance, Ford, Daimler, etc., and new supplies will be provided to Mahindra Group's new model planned for release in 2020. Also, LG Chem is focused on developing innovative batteries that exceed the limits of existing ones, fuel cell materials, and lightweight and high functional materials for vehicles.We are fostering the Carbon Nanotube (CNT) business applicable to rechargeable batteries and semiconductors, and preparing the commercialization of carbon fibers that make lightweight and eco-friendly automotive materials by 2019.

Water In 2017, the sales of RO membranes doubled from the previous year, and especially in the seawater desalination market, we ranked first by winning four large-scale projects.Filters that apply ceramic separation membrane materials and next-generation water treatment technologies are now under development.

Bio In the red bio sector, LG Chem is focusing on the R&D of new drugs for cancers/immune disorders and diabetes/metabolic disease. In addition to our own research, open innovation is also being utilized to speed up the expansion of new drug pipelines. As for green bio, development of finished goods with new materials are being reviewed, and planning to concentratecapacity on overseas markets.With the establishment of the FarmHannong Seed Research Corporation in Thailand in February 2018, we will focus on the Asian markets with high growth potential.

Strengthening Competitiveness of Current Businesses

Our existing businesses leading the market have gained higher competitiveness by encroaching on high value-added businesses. We invested more than KRW 1 trillion in the domestic basic materials sector, including expansion of elastomer and NCC business, establishment of high value-added advanced material R&D center and eco-friendly plasticizer business, and investment in acrylic acid/SAP, to expand our high value-added businesses of basic materials sector such as metallocene PO, high-functioning ABS and EP, next-generation SAP, and eco-friendly synthetic rubber. In the battery sector, we secured a competitive edge in terms of cost, performance, and safety through proactive R&D activities, and will surely be the 1st when it comes to winning large projects on third-generation electric vehicles.

Strengthening Core Capacity

LG Chem's competitive edge comes from differentiated R&D, and we are making large investments in R&D to exceed KRW 30 trillion in sales for the first time. In parallel, we are also providing strong support to secure talents and help them grow through self-development.

R&D Innovation

Being the first to establish a large-scale R&D complex in the industry, LG Chem has written a history of challenges and innovations. We are continuously working to discover new businesses with strong potential by investing in R&D and securing and integrating core technologies. Our R&D activities are especially concentrated on energy, water, bio, and next-generation materials based on LG Chem's core technologies, including catalyst/process, coating, organic/polymer synthesis and optical design.

Best Practice Key R&D Innovation Cases

Basic Materials & Chemicals
Expanding Acrylic/SAP

LG Chem plans to invest KRW 300 billion in the Yeosu Plant for expansion by 2019. After the expansion, the Yeosu Plant will have the capacity to produce 700,000 tons of acrylic acid and 500,000 tons of SAP, and the vertical integration of the 'Propylene Chain' that connects propylene, acrylic acid, and SAP will be strengthened. SAP is a synthetic resin product made through polymerization of acrylic acid and special polymer material that has water absorbing and holding properties. 90% of the produced SAP is used for diapers and sanitary pads, and our SAP production is expected to increase the annual sales by KRW 300 billion.

Energy Solutions
Production Base in Poland

LG Chem plans to build a 41,300m² sized production base in Wrocław, Poland, by investing USD 380 million in its Polish subsidiary, LG Chem Wrocław Energy. When the production base is completed by the end of 2018, it will have the capacity to supply lithium-ion batteries for 100,000 electric vehicles every year, which means we can produce batteries for 280,000 electronic vehicles by leveraging our four-point production system (Korea, the U.S., China, and Poland).

IT&E Materials
RO Membrane

LG Chem's reverse osmosis (RO) membrane was developed with high desalination rate and 10% higher water flux rate against its competitors, which led to our winning of four large-scale projects in Africa, etc. Our RO membrane also ranked 2nd in the 2018 Global Water Awards(Water Technology Company of the Year) hosted by GWI (Global Water Intelligence)in April 2018. In the long term, after stabilizing the RO membrane, we will review plans to expand into adjacent businesses to realize our full potential in the water treatment sector.

Life Sciences
Zemiglo, Diabetic Drug

Zemiglois an oral anti-diabetic treatment that inhibits Dipeptidyl peptidase4 (DPP-4). Zemiglo has become the top-selling new drug in domestic marketamong drugs developed in Korea, recording KRW 70.5 billion in sales for 2017, and also ranked third in terms of market share for all anti-diabetic treatments that inhibit PP4 in Korea. We are aiming to achieve KRW 100 billion in sales and 20% or more market share by 2020.

more than 20% every year, and higher portions of investments are allocated to businesses relevant to new growth engines, such as producing mid to large-sized batteries, securing raw materials, and raising competitiveness of cathode material products, as well as basic materials.

Sales of New Products (Unit: KRW billion)

*Performance of FarmHannong and Life Sciences division are included in data from April 2016 and January 2017 accordingly.

The Science Park Era The LG Science Park was officially opened in Gangseo-gu, Seoul, in April 2018. With the R&D workforce from LG's main subsidiaries, LG intends to develop this R&D complex into a strategic base for the fourth industrial revolution. Convergence of businesses, including next-generation auto parts, energy solutions, and smart city as well as electronics, displays, and communications will take place in this complex. The LG Science Park will have 16 buildings for R&D by 2020 in a total area of 170,000m² (53,000 pyeong), which is equivalent to 24 soccer fields, and total floor space of 1,110,000m² (335,000 pyeong). LG Chem's Life Sciences Division also transferred its new drug laboratory from the Daejeon R&D Campus to the Park in late December 2017.

Key R&D Performance

| Basic Materials & Chemicals R&D |

Developing Highly-modified SSBR (Solution Styrene Butadiene Rubber) The demand for eco-friendly tires has been increasing due to the tire grading system and CO₂ emission control implemented in many European countries, which was followed by rising demands for the development of fuel-efficient and highly-modified SSBR that is applied to eco-friendly tires. The highly-modified SSBR developed by LG Chem has improved fuel efficiency by 20% compared to existing products by maximizing reactivity with silica through the development of denaturation technology and high-performance denaturants.

Developing High-performance ABS ABS is used for various purposes based on its excellent mechanical properties, superior coloring and processability. LG Chem developed a new technology based on high-performance ABS manufacturing and applied it to PBL(Polybutadiene Latex)/ABS polymerization, coagulation and compounding. We have increased product shock efficiency by more than 10% and enhanced surface clarity by adjusting the PBL bridge structure and applying new emulsifiers. In addition, through the development of High Graft ABS manufacturing technology, the quality of post-processing has been improved, strengthening the fundamental quality competitiveness.

| Energy Solutions R&D |

Developing Free Form Battery for Smart Phones We have developed a free form battery beyond the existing pouch/cylindrical type batteries, opening a new horizon for miniaturized/high-performance smart devices. This battery applies the Lamination & Stacking technology instead of the conventional winding method, which helps to maximize the internal space efficiency of the device by providing batteries in the forms desired by customers.

Developing High Energy Density ESS Standard Module with Long-life Battery We have developed a world top-level high energy density standard module with long-life battery. It is applied to the most miniaturized and lightest solar cell-type residential ESS products. In particular, stand-alone battery modules are equipped with battery management system (BMS) and designed to increase the maximum amount of power to 65kWh by easily connecting up to 10 basic modules of 6.5kWh in order to meet the various needs of customers.

| IT&E Materials R&D |

Developing encapsulated composite metal sheets with excellent moisture barrier function for OLED panels Encapsulation technology that protects OLED(Organic Light Emitting Diode) devices from oxygen and moisture is essential for manufacturing large-scale and flexible OLED panels. LG Chem developed a highly-reliable and heat-resistant composite metal sheet. This sealing material manufacturing technology is applied to large-area hybrid encapsulation for OLED devices. The manufacturing process time is shortened by integrating metal sheets and encapsulation materials, and productivity is enhanced by applying the room temperature process, as the heat curing process is no longer required thanks to large area bonding.

| Life Sciences R&D |

Developing Oral Treatment for Ulcerative Colitis LG Chem developed the nation's first oral treatment for patients with severe ulcerative colitis. The treatment completed preclinical testing, and the result of animal testing confirmed that there is no toxicity up to 30 times the effective dose (0.1mg). Currently, the Phase I clinical trials are under way, and we are aiming for the Phase II clinical trials in 2019 and the final approval in 2028. When successfully developing a safe and effective best-in-class treatment, we will be able to enhance our business performance by expanding into additional autoimmune disease indications.

Strengthening Internal Capacity

Strengthening Corporate Leadership In 2017, LG Chem established a management strategy organization to diversify its future business portfolio and specify strategic tasks. The Company is also reorganizing its overall quality management standards and nurturing quality professionals in order to consolidate the quality management system. In addition, we have formed a corporate procurement strategy organization for establishing procurement strategies, purchasing strategic items, and increasing synergy between business divisions.

Strengthening R&D Capacity To align its R&D strategies with business strategies, LG Chem specifies the company-wide R&D strategies and preparations for the future by adjusting and integrating the R&D strategies, the resource input propriety and the future preparations of each division. In particular, we established an organization under the control of the Chief Technology Officer (CTO) in 2017, driving business results by aligning with corporate strategies, strengthening project management, promoting open innovation and creating synergy among affiliates. While managing 11 key future tasks, we are striving to improve R&D performance and research capacity through the gate review of key tasks and examination of corporate tasks.

Securing Patent Competitiveness LG Chem promotes strategic patent management in all stages from product development to commercialization. The Company also makes efforts to secure strategic patents and response strategies to other companies' patents in each stage of product development. LG Chem builds a patent portfolio focusing new business including discovering excellent patent through IP*-R&D associated activities about main technology in future new business such as bio and the advanced material field. As of 2017, LG Chem held some 46,976 intellectual properties, of which 20% belong to the future growth engine field and the information & electronics material field, and 41% are in the battery field. In 2017, we have also secured a number of bio patents thanks to the merger with LG Life Sciences, and will continue to strengthen patent competitiveness in bio and other future business areas.

Number of Intellectual Properties (Unit:number of intellectual property)

	2015	2016	2017
Domestic patents and trademarks	15,423	16,739	19,480
Overseas patents and trademarks	19,997	22,250	27,496

Strengthening Management of Intellectual Properties LG Chem operates a company-wide intellectual property management system. Personnel in charge of IP supports each stage from an initial R&D stage to commercialization to establish the strategy of application and secure the patent for each stage. The company also strengthens the expertise of intellectual property activities by recruiting patent experts including patent attorneys and law experts. LG Chem trains local patent experts by dispatching personnel in charge of patent to overseas strategic areas. Also, all patent-related activities including application, analysis, and litigation are handled by the patent management system whose processes are continuously reviewed for further system enhancement.

Open Innovation We are expanding open innovation in various ways in order to prepare for the future and to secure technologies for differentiation in a timely manner. We are engaged in the joint development and equity investment with foreign start-ups and companies, the operation of global open programs to discover ideas for next-generation battery technologies, and the cooperation with universities and research institutes to establish the foundation for green bio R&D and product development. From 2018, we will also actively promote equity investment through venture capital.

*IP: Intellectual Property

Securing and Nurturing Talents

R&D and human talent serve as the root of corporate value creation in the chemical industry. Securing excellent talents is critical for successful business innovations, such as advanced business structure and innovation in manufacturing and R&D divisions.

Securing Talents

R&D Securing Talents It is of paramount importance to secure and nurture professional R&D talents to lead future businesses, especially in the areas of rapid growth such as rechargeable batteries. LG Chem conducts various recruitment activities at home and abroad to raise competitiveness and support the early commercialization of future tasks. The company also recruits talents needed in the new research fields such as bio through industry-university cooperation program with good universities in the country and conducts promotion activities about R&D back-up personnel through exchange meetings, industry-university workshops and Lab Tour which researchers visit major research teams in the country.

Number of R&D Employees (Unit: person)

*Performances of FarmHannong and Life Sciences division are included in data from April 2016 and January 2017 accordingly.

Recruiting Global Talented People LG Chem performs the 'BC (Business and Campus) Tour' an event where the management directly participates and recruits local talented students to acquire global talented people. In 2016, the company visited China, the USA and Japan to conduct the recruitment event and held the 'LG Techno Conference' to introduce LG's future business direction and R&D technology. In addition, it runs an internship program targeting foreign students studying in the country to strengthen business capacity by securing talented people by overseas offices and let them enter local offices.

Advance Procurement of Talent LG Chem supports the grant of scholarships for future human resources, provides them with job opportunities, and secures talented people in advance through the 'Advance Procurement Talent' consisting of R&D Scholarship, Industry-University Cooperate Program, Global Internship, Industry-University Cooperative Internship, etc. The 'Securing the Talent' program is a win-win recruitment method, as the Company can evaluate the potential and capability of applicants while at the same time, the applicants are given an opportunity to experience the growth vision and organizational culture of the Company.

R&D Scholarship	Scholarship for domestic and foreign R&D masters and doctors; employment opportunities after graduation
Industry-University Cooperate Program	Customized education and scholarship for masters/ doctors graduating from MOU universities;
Global Internship	Advancing cultivation and verification of global talent; mentoring in addition to employment opportunities
Industry-University Cooperative Internship	Long-term internship with credits during semesters (16 weeks); employment opportunities after internships

Fostering Talents

Fostering Talents for Leading the Market LG Chem is conducting trainings for the future entrepreneurs of HPI (High Potential Individuals), the next-generation global business leaders and a pool of division leader candidates to polish the talents of those who can lead the market. In 2017, LG Chem strengthened 1:1 coaching for division head candidates and next-generation global business leaders to develop insight on organizational operations and business performance capabilities. We are also strategically fostering core talents by revising the HPI training system in accordance with the reorganization of the HR system.

Fostering R&D Talents LG Chem implements R&D common/professional capacity and management capacity education to build R&D capacity of researchers. The company also conducts a mentoring program and orientation education for new researchers.

It helps researchers to develop professional knowledge in polymer chemistry, organic chemistry, analytical chemistry, material engineering, electrochemistry and optics through invitation lectures of experts and e-learning. In addition, LG Chem implements patent education and methodology to solve problems to enhance R&D capacity, and supports them to develop professional knowledge by contacting latest technology trends through seminars and academic conferences.

Furthermore, the company continuously conducts education related to R&D management such as accounting, marketing, research tasks management and commercialization to create outcomes through R&D connected to each division's strategy. In the case of researchers who execute many overseas businesses, LG Chem provides them with customized language education to work smoothly.

Fostering R&D Talents LG Chem operates a variety of female talent development programs for each job position/grade, including HPI training for female employees and new female employees, and training for future women leaders. In addition, we provide female mentoring support inside and outside the company for the growth of female talents. Senior women who are experienced in the topics of competency and leadership building, work-family balance, and organizational life will become mentors, while younger women who are concerned about their growth will become mentees, establishing a relationship of counseling/advice/role models for mutual growth. Mentoring is provided by in-house female superiors for staff/seniors, and by external female mentors composed of female executives from global companies/domestic large companies or industry experts for managers/leaders. We have organized a women's community at each workplace where junior-level female employees can establish visions and achieve growth within the company. In particular, through the community, we discussed what is necessary for the establishment and growth of mutual network for junior-level female talents.

Female HPI Group	Personal development, Healing Campus
Female Team Head Candidates Group	Principles to be a good leader, Healing Campus
Female Group above Professional Level	Mentoring with external role model about career development/work-life balance/working life
Female Group at Junior Level	Operating community (setting up vision, communication on difficulty, forming network)

Increasing Leadership Capacity by Rank LG Chem implements annual leadership education for all employees to increase leadership capacity by rank. We have newly established training programs for managers/plant managers in 2017 in order to raise the leadership capacity of senior-level leaders. In 2018, we will be revising the training programs by rank according to the HR system reform, and adding more practical contents.

Innovative Organizational Culture

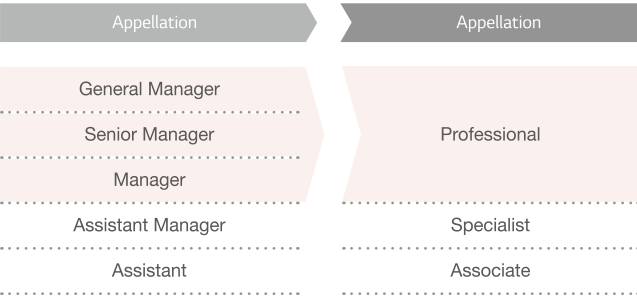

Creating an organizational culture that allows employees to work pleasantly is very important for sustainable management, as it motivates people to focus on their work. We pursue a horizontal organizational culture and open communication that enables employees to realize their full potential and enhances work efficiency through value-based decision makings and business process improvements. In addition, we support work-life balance of our employees to create a happy and healthy workplace.

Innovative Work Method

LG Chem is pushing for work method innovation to place a greater focus on value-oriented tasks that create customer value, by providing enterprise-level guidelines and detailed activities for each business division/sector.

Implementing Value-Oriented Tasks LG Chem intends to strengthen its focus on tasks that create customer value and enhance the autonomy of its employees, by innovating work methods irrelevant to customer value creation. In addition, various efforts to improve the culture of reporting and meetings are being made to enable employees to focus on key tasks.

Simplifying Job Grading System for Horizontal Organizational Culture In 2017, a new job grading system was introduced to respond to changes in the business environment and to spread a horizontal and creative organizational culture. We have simplified the grading system for office employees, including researchers, from a 5-stage system based on 'position and seniority' to a 3-stage system based on 'role.' Also, in order to provide more opportunities for young and capable talents and to strengthen the dynamics of the organization, we expanded team leader candidates to the senior manager level.

Work-life Balance Introducing selective welfare policies as the first in the LG Group in 2006, LG Chem has continuously strived to establish a corporate culture that promotes work-life balance. Since July 2017, the application of flex-time was extended from several divisions to all office employees in the Company. When an employee applies for flex-time, he/she can choose anytime between 7-10 am to start working, and leave between 4-7 pm as long as 8 working hours are served for each day. The Company is also actively reducing overtime and holiday work and encouraging employees to take leaves for refreshment for higher productivity at work.

LG Chem introduced a selective flexible work system which allows employees to work 40 hours in average and 52 hours in maximum per month. As a result, employees can focus and work more when they have work to do, and work less when they are not very busy. After reorganization of system, for the employees who work more than the basic working hours in weekdays and public holidays, LG Chem offers them 1.5 hours of holiday for 1 hour of extra work to enable them to take rest. Also, LG Chem adopts 'Working Hour Management System' in LG Chem intranet to monitor and manage working hour with the introduction of flexible work system. With the system, employees can manage working hours systematically through typing in the time of work begins and ends, and unofficial hour. To operate the system successfully, meetings were held for administrative and technical employees. In addition, LG Chem put effort to eliminate the culture of long time work to do its best to establish system and culture for work-life balance.

Open Communication Culture

Strengthening On-site Communication LG Chem has strengthened its on-site channels for communication with the CEO to promote the downstream implementation of the corporate vision, core values and management strategies, and also to establish a horizontal communication culture. We strictly adhere to the basics and principles to earn the trust of our customers, and provide unique

discipline-guidelines including the Focus on Leading the Market Board and monthly letters for the executives and employees at home and abroad. We also operate a 'Speak-Up Table' where employees freely express their opinions and the CEO gives answers accordingly, together with the Employee Council and groups of common interests. Lastly, we run the Employee Council to promote organizational culture, and to create a working environment where employees can raise their voices and focus on their work.

Communal Labor-management Relationship LG Chem promotes horizontal labor-management relation that respects the respective role of each employee on the equal footing of labor-management relation. Based on management principles, 'Customer-value Creation' and 'People-oriented Management', LG Chem practices labor-management partnership with participation and cooperation. Through this, the company creates continuous outcome, achieves the world-level competitiveness, improves the quality of life of employees and takes communal labor-management to contribute to social development as its vision. For this, LG Chem is running its own labor-management cooperation model on the level of corporate management, the worksite and collective bargaining. On the level of corporate management, LG Chem raises the value of the company and its members by increasing trust in the management and strengthening communication. On the level of the worksite, the company raises productivity by systematically training technical talents in the field and complying with basics and principles. On the level of collective bargaining, the company is building a business-oriented labor-management partnership through a reasonable and productive negotiation culture and labor-management participation and cooperation to increase productivity.

Management	Field Work	Collective Bargaining
Enhancing the value of members through transparent and open management	Securing the best productivity through a strong teamwork and innovation	Building a business-oriented labor-management partnership through productive negotiating culture

Carrying Forward Manufacturing Innovation

Smart systems that apply big data to the process ranging from raw material supply to production to consumer feedback are a global trend of manufacturing innovation. LG Chem is pursuing smart manufacturing by applying various ICT technologies to its existing production lines. Based on the information

system, facility operation technology, and automation equipment, we seek to acquire more meaningful big data by combining with the core technologies of the 4th industrial revolution, including IoT, 3D, Sensor, Robot, Cloud, VR/AR, etc., analyze such data to lead the development in many manufacturing areas, and strengthen business competitiveness with higher productivity and quality.

Concept of LG Chem's Smart Factory

Measurement sensors attached to facilities and processes collect and analyze data in real-time, and provide a clear picture of every situation in the plant. Moreover, analyses in the process contribute to raising the level of productivity, quality and safety environment, and also enable self-diagnosis and judgment.

Operating Industry 4.0 Secretariat

For effective cooperation and communication in pursuing intelligent manufacturing at the corporate level, an integrated secretariat is being operated to collaborate with business divisions, data optimization project teams, and organizational culture and business innovation teams. The secretariat also runs the LG Chem Info-in program to promote convergence and culture of sharing. In addition,

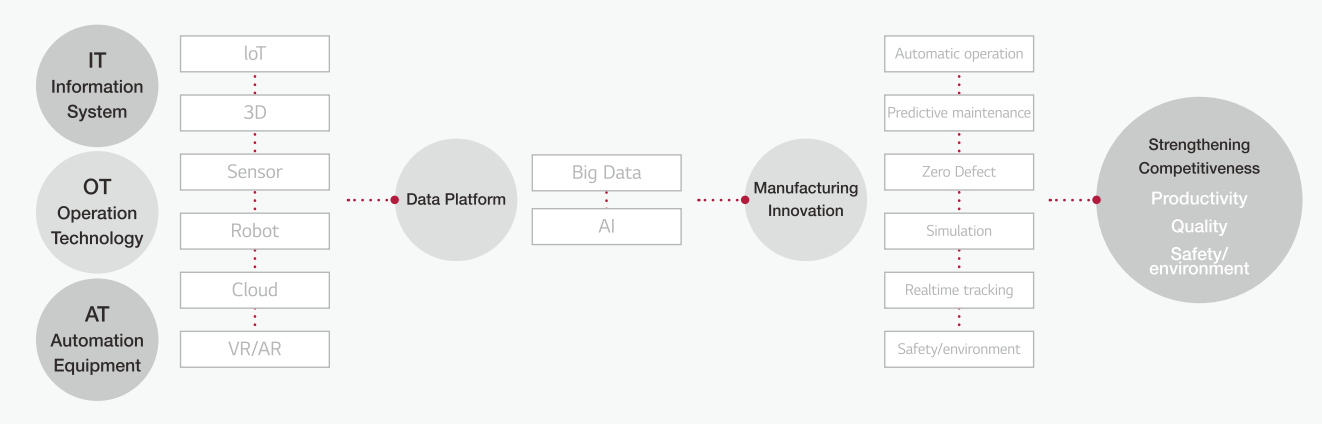

meetings of intelligent electronic manufacturing leaders are held to share the best practices of new technology utilization and discuss ways to promote intelligent manufacturing.

Securing Intelligent Reference

LG Chem has been operating 10 PoC* tasks for the company-wide implementation of intelligent manufacturing. We have set predictive maintenance of facilities, optimization of big data, and AI/deep learning as improvement areas with the use of enhanced data analytics and are collecting BP cases for each area. The introduction of data analysis platform is also being reviewed for the effective dissemination and maintenance of best practice models.

Supporting Efforts to Strengthen Manufacturing and Analytical Capacity

To support the establishment and utilization of a big data platform, we are running the 'Data Scientist' program to nurture data experts. In addition, we are promoting the construction of high-efficiency production systems that manage the KPIs for manufacturing innovation, expand modular designs, and digitize designs at all business sites.

*PoC(Proof of Concept): PoC is a demonstration process, the purpose of which is to verify that solving certain organizational problem is possible in the real-world. It is used for new products which are not introduced in market to verify in advance.

BACK TO BASICS

Industry Trends : Change & Response

The uncertainty of the current business environment is higher than ever before. The emergence of new technology and fierce competition have resulted in the co-existence of risks and opportunities. Under these circumstances, we need to focus more on the value of 'basics'. And the basics that LG Chem should keep to is 'quality', and 'safety' is a must.

Poor management of manufacturing process in the chemical industry can lead to chemical accidents or product defects. This will cause extensive damage to the environment and safety of local communities, and negatively affect the company in terms of finance and image.

Since our products are used as materials for finished goods, such as electronic products, automobiles and constructions, they can create a ripple effect throughout the industries. Accordingly, we need to double check the safety and quality of our products. The chemical industry has already entered the rapid growth period and is highly competitive. In this regard, LG Chem not only needs to meet the market expectations for high quality, but also to secure the quality of market-leading products.

Moreover, as the global market has turned its focus toward green industries, LG Chem's stakeholders including clients are demanding that the Company obtain more eco-labels and comply with environmental regulations.

Strategy : Risk & Opportunity

LG Chem has pursued fundamental innovation in its business structure and practices, not to survive but to lead the industry in this rapidly changing business environment. The Company is making all-out effort to provide solutions that satisfy customers with better quality.

In addition, the international regulations on chemical substances have also been strengthened. Accordingly, LG Chem proactively responds to such regulations on chemical substances/products, and establishes safety management systems to take the lead in accountability management activities. Besides, the Company strives to prevent safety accidents by promoting the culture of safety and health at workplaces. Also, it will focus on creating a safe working environment by preventing various safety accidents, such as leakage of toxic chemical substances, fire, and explosion.

Evaluation

Injury Rate (Unit: %, Korea)

*Figures are increased due to high approval rate for industrial accident in 2016

Ensuring Product Safety

LG Chem, as a manufacturer and supplier of materials and products that are closely related to our life, tries to reduce the influence of our products on the health of customers and the environment. We share information on our chemical substances with customers to ensure transparency in product safety.

Strengthening Product Safety System

LG Chem strictly verifies substances subject to control according to product environmental management skills from raw materials for all products. The company classifies substances subject to control into three phases according to the risks associated with hazardous substances and has organized a business system that all materials can be purchased after verifying their control items.The company reviews the guarantee to control products through the chemicals management system of resources and products, CHARMs (Chemical Assurance and Regulation Management System). It verifies maleficence and the risk of materials by building a computer network through which the MSDS (Material Safety Data Sheets) for all materials can be reviewed, and supports the issuance of the product environmental guarantee within the system.

Chemical Substance Management System

LG Chem established the Chemical Assurance and Regulation Management System (CHARMs) in 2014 to prevent safety accidents and comply with regulations throughout the entire process from the purchase/warehousing to use/delivery/disuse of chemical substances, and has improved the system to comply with regulations, ensure product safety, and strengthen accountability.

With regard to all the raw materials purchased through the CHARMs, LG Chem acquires the information on chemical components before making a purchase order, and examines the information on toxic properties and legal actions to prevent any possible risks. Combing the acquired information on raw materials with the Bill of Material (BOM) of our products, we conduct integrated management of information on products that used the purchased raw materials.

In 2017, we established a system to manage the information on the composition of raw materials for articles, such as batteries, as well as of chemical products, and increased trust in the safety of harmful substances in every product made by LG Chem.

Response to Regulation of Chemical Substances

LG Chem verifies whether to register new materials and existing materials subject to registration by building the management system of substances subject to registration according to the Act on Registration, Evaluation, etc. of Chemicals, and tightly examines the manufactured or imported quantity according to registered quantity. The company reports quantity and usage of new chemical substances and existing chemical substances to manufacture, import and sell to the Ministry of Environment, and conducts complete enumeration of imported materials. In addition, LG Chem joined the consortium of the Korea Petrochemical Industry Association and acts as the representative of a joint registration consultative group. The company plans to complete joint registration of 17 substances manufactured by LG Chem on time, until June 2018 by securing the data to evaluate maleficence and risks. Furthermore, LG Chem responds to the Chemicals Control Act by building and running the system to restrict the procurement and examine the reported import quantity of toxic substances.

Sharing Meetings to Respond to Chemical Regulations among Suppliers

LG Chem held sharing meetings to respond to chemical regulations to share information on trends of various domestic and foreign chemical regulations in order to strengthen response and to support procurement suppliers' compliance with chemical regulations. The 2017 sharing meeting to respond to chemical regulations was participated by 270 employees from 211 suppliers and to share understanding in the Act on Registration, Evaluation, etc. of Chemicals, MSDS evaluation method, global product & environment regulation, and LG Chem's material ingredients system. In the future, LG Chem will actively and continuously support suppliers to take appropriate response to chemical regulations.

Global Level Management of Chemical Substance

LG Chem preemptively responds to global regulations by preparing the responsive manual for global product environmental regulations to reduce risks related to regulations on chemical substances in performing global business. The company subdivides the criteria for product component management into each material and regulation, including restrictions on and the prohibition of harmful substances designated at home and abroad by revising the existing 'Development and Management of Eco-friendly Products' as the 'Management of Product Environment'. LG Chem also provides the activity guidelines across product development, production and supply to efficiently respond to demand of customers and suppliers from different countries. Besides, the company provides

the latest MSDS of enterprise products in 33 languages through the IT system and reflects the requirements by global client companies and the latest trends of laws on a form to guarantee issuance. In addition, LG Chem shares global regulation trends with suppliers by holding the sharing meeting to respond to regulations on chemical substances.

Enhancing Customers' Right to Know

As part of the efforts to enhance customers' right to know and transparency, LG Chem operates a product website (www.chemwide.co.kr) where customers can access product specifications, such as purposes of use, characteristics and material properties, and also Material Safety Data Sheet (MSDS) and environmental certifications. Particularly, the MSDS is a basic document that guarantees the legitimate management of chemical substances by customers and workers' right to know, and provides information on the environment and health for those who might be exposed to those substances. To reduce safety, environmental and health risks that might occur due to missing information, we will continue to provide information that customers need when purchasing products through the website.

Improving Product Quality

LG Chem's products are used as materials for finished products. Since the quality of our materials affect that of finished goods, we strive to provide products of better quality for the development and success of our customers. We are also making efforts to increase customer value through quality improvement of our products.

System to Promote Product Responsibility

LG Chem provides customers with eco-friendly and competitive materials and solutions to 'increase customer value' and simultaneously contributes to a sustainable future. For this, the company conducts various activities with its vision of becoming 'Eco-Product Solution Partner' to derive and provide efficient and valuable solutions in environmental and economic perspectives to all manufacturing processes from R&D to a product disposal.

LG Chem runs the system and regulations comprising all processes from the procurement of raw materials to sales of final products to guarantee eco-friendly chemical products. Through the 'Eco-friendly Supply Chain Management Guidelines' including domestic and international regulations such as EU REACE Regulation, SVHC, CA Proposition 65 and conflict minerals, LG Chem has established

the criteria for materials which can be used by the company and distributed the relevant criteria to suppliers to comply with them.

The company approves purchasing materials that have been verified by each plant and the safety environmental department at the head office as eco-friendly materials after obtaining the material component information from suppliers through the material component inspection system.

In addition, the department of the procurement and the department of environmental safety directly communicate with suppliers to manage eco-friendly materials, and the department of quality and the CS team communicate with client companies to control product quality.

Reinforcing Product Responsibility Capacity

Training Product Responsibility for All Employees Recognizing the importance of product responsibility among employees, LG Chem conducts various education activities to comply with social and environmental responsibility of products in business activities, such as education on MSDS preparation and management for managers in related departments such as purchase, development and quality, and education on the Act on Registration, Evaluation, etc. of Chemicals, substance registration process, and response to trends in production environment regulations.

Sharing Product Responsibility Information LG Chem provides quality managers at each business sector with the newest information on global product environmental safety and hazardous substance regulations through the Safety & Environment Portal. Essential aspects of regulations by country are shared to prevent corporate and legal regulations from being violated.

Sharing Product Responsibility Information (Unit: person)		
Training Course	Target	Number of Participants
Response to global regulation on product and environment and chemical substances management system	Purchases, R&D, etc. (on demand basis)	159
Chemical substances experts course	Safety and environment	68
Understanding purchase, and safety and environment	Purchase (Purchase Academy)	24
Total		251

Creation of Customer Value through Quality Innovation

Promoting Quality Mind-set among Employees To secure the quality management system that lives up to its status as a global company, LG Chem has made a series of company-wide efforts. The internal quality assurance team at the corporate level was operated to enhance quality competitiveness from the perspective of customers. Also, the management delivered special lectures and messages to promote quality mind-set among employees and online program on quality mind-set was provided for employees.

Advancing Quality Management System LG Chem has used the Failure Mode & Effects Analysis (FMEA) tool from the development stage to ensure product quality and safety. The use of FMEA was selected as an essential activity in the development process, and facilitators were nurtured and relevant IT software was introduced to support the activity. To advance the quality management system, a number of activities to manage foreign substances by plant and to ensure data reliability were more intensified.

Quality Management Trend

*SPC: Statistical Process Control

Furthermore, the quality council at the corporate level was bimonthly operated to improve the quality management system of each business unit, and also the quality council at the group level, participated by the top management in quality of 6 companies belonging to LG Group (LG Chemical, Electronics, Hausys, Display, Innotek, and Uplus), was operated with LG Chem as a secretariat.

Improving Quality Role and Capacity

As part of the efforts to improve the role and capacity of quality organization, the Quality Academy has provided basic, intermediate and advanced courses on quality management to train the human resources required for quality improvement activities. The number of Master Black Belt (MBB), project leaders in key business areas, has increased from 35 to 67, and that of Black Belt (BB), sub-project leaders, has increased from 350 to 526.

In 2018, a number of quality talents will be assigned to deal with persistent quality issues. Also, a series of activities is being conducted to reduce the F-Cost by resolving those issues.

Quality Innovation Cases by Business Sector

| Basic Materials & Chemicals |

At the Basic Materials & Chemicals Division, we have strived to increase the sales of high value-added and eco-friendly products in alignment with business enhancement strategies by selecting tasks for improvement from the perspective of customers, and also to provide values recognized by customers by applying a data-based statistical technique and resolving issues in a systematic manner. In addition, we have produced a group of quality experts through the promotion of six sigma projects, assigned employees with MBB to key strategic tasks, and trained those on site to internalize quality management.

Regarding the customer solution activity, one of the most representative innovation activities of the Division, we have introduced 'solution activity system' to strengthen the 'Gate-review' process from task discovery to performance verification and to increase customer value.

| Energy Solutions |

The Energy Solutions Division has operated quality management organizations responsible for automotive, ESS, and IT & new application batteries, respectively, to ensure the quality of mass products, and also a new organization for development quality. In this way, we have carried out activities to improve quality in all phases of development, from early development to mass production, and also to enhance the completeness of development. Particularly, more specialized organizations, such as Reliability Team and Analysis Team, have been formed to develop new methods of defect inspection, and to enhance big data modeling and defect analysis as part of the efforts to bolster customer confidence in our products.

In addition, in order to strengthen the quality base required for global companies and keep pace with them, a number of activities have been conducted to constantly check and improve our quality system through a separate task force team (TFT). Also, a new overseas Warranty Center will be established to strengthen our global response system. Furthermore, by establishing a standard quality contract for each business, we clarify the quality objectives, operating environment,

and warranty terms of our products to ensure product reliability and customer satisfaction

| IT & Electronic Materials |

The IT & Electronic Materials Division has operated the Quality & Technology Committee to establish mid to long-term quality strategies and secure fundamental quality competitiveness. In addition, we have leveraged the Master FMEA to prevent quality issues before mass production, and also Q-Gates to bolster quality assurance by phase of development. Also, we have utilized the results of key customer surveys and VOCs in development/production/quality improvement activities, and fostered the training of quality experts: BB (Black Belt) and MBB (Master Black Belt).

| Advanced Materials |

At the Advanced Materials Division, we strive to improve customer satisfaction by operating a dedicated quality organization. We have upgraded the quality/innovation department under the direct control of the Division to the 'responsible' level organization by integrating quality and innovation functions. Also, we conduct on-site management by the head of the Division at production sites and laboratories once a week to increase the quality awareness of employees.

| Life Sciences |

Because pharmaceuticals can directly affect human life and health, they are subject to strict regulations on the quality of manufacturing, distribution, handling and process control by the Pharmaceutical Affairs Law. The Life Sciences Division guarantees the quality of products through advanced manufacturing and quality control, which is scientifically proven at all stages from the receipt of raw materials for pharmaceuticals to the shipment of finished products.

We have developed and sold a quinolone antibiotic 'Factive', which is the first of its kind at home approved by the U.S. FDA, through scientific and advanced quality control. We have also exported hepatitis B and pentavalent vaccines certified by the WHO to about 70 countries all over the world.

Recently, 'Zemiglo', the nation's first new diabetes drug, has been licensed for sale in Mexico. And 'Eucept', a biosimilar product, has successfully met the quality control standards of advanced countries by obtaining approval from the Japanese Pharmaceuticals and Medical Devices Agency (PMDA).

Improving Workplace Safety

Safety accidents in the chemical industry require extra care and attention since they can lead to casualties, tarnished corporate image and financial loss. LG Chem is doing its best to maintain a safe and healthy environment for its employees.

Safety, Health and Environment System

Safety, Health and Environmental Management System LG Chem is operating the systematic Safety, Health & Environmental System based on strategies and goals in accordance with ISO 14001, OHSAS 18001 and KOSHA 18001. In addition, the company announces its intention of the Safety, Health and Environment Management publicly and establishes the Safety, Health and Environment Policy to demonstrate the company's steadfast commitment. Based on this, LG Chem makes company-wide regulation and work guide for each of business sites, and implements safety and environment tasks. Also, the leader's on-site oversight and field management activities field management activities of each organization are on progress to prevent accident. In case of safety and environment accident takes place, LG Chem reflects it into employee evaluation.

Safety, Health, and Environmental Policy

LG Chem recognizes that safety, health and environment (SH&E) is the fundamental element for securing differentiated competitiveness, and will implement the following principles to continuously improve performance in safety, health and environment based on clear goals and strong executive ability.

- We will comply with laws and regulations and establish SH&E rules leading the industry at home and abroad.
- We will drive continuous innovation throughout the entire life cycle of the product to supply environment-friendly products and services.
- We will provide a safe and healthy work environment, and ensure the principle-adhering corporate culture.
- We will support our suppliers and local communities in improving the SH&E practices based on our social responsibility.
- We will open information transparently and sincerely communicate with stakeholders.

Safety, Health and Environmental Governance The Corporate Safety and Environment Committee which discusses the main decision making about safety and environment is composed of chief executives in charge of safety and environment at each plant and members of the Management Committee. The committee is held twice a year and discusses the main issues related to safety and environment, major promotion results and future plans. LG Chem organized a labor-management Occupational Health and Safety Committee at each plant,

consisting of an equal number of employees and management, and conducts an inquiry of and decides the main issues related to safety and environment. Through this, LG Chem prevents accidents that can occur at plants and manages the health of employees. Furthermore, LG Chem discusses safety and environment improvements and shares excellent cases among plants through the Corporate Safety and Environment Working Committee, meetings of managers, and workshops for managers.

Establishing Safety Culture

Building Safety and Environmental Capacity At LG Chem, a number of safety and environmental capacity building programs are provided for employees including those who are in relevant positions, safety engineers on site, and safety and environment managers. The programs consist of Process Safety Management (PSM) expert program, chemical substance expert program, and electrical safety capacity building program. Besides, a capacity building program on working environment management will be established to deal with fire accidents/hazardous materials and improve the working environment.

Category	Description	Number of Participants in 2017
PSM Expert Program	Business practices and practical training related to process safety management strategy and HAZOP (Hazard & Operability Review) are carried out, through which process safety management capability is strengthened.	32
Chemical Substance Expert Program	Identification of the management standards and inspection methods for chemical substance handling facilities and practical training on external impact assessment (safety confirmation for third party damage outside the workplace from the design and establishment of toxic chemical substance handling facilities) are conducted, through which the safety environmental management capability of chemical substance handling facilities is strengthened.	68
Electrical Safety Capacity Building Program	Preventive measures for fires caused by electrical ignition are enhanced through practical training on the management of explosion-proof equipment and static electricity, and grounding.	49

Strengthening Management Competency in Safety and Environment through SH&E Performance Conference LG Chem held a SH&E Performance Conference in November 2017 to share activities and performance to prevent safety and environment accidents at plants at home and abroad. The meeting was participated by 230 employees from plants at home and abroad, and suppliers. Also, best practices in safety and environment and excellent supplier cases

were presented. LG Chem contributes to establishing safety culture, providing opportunity to benchmark best practices, and enhancing pride for the safety and environment tasks.

Inspection and Management of Safety

LG Chem divides the safety and environment inspection system into regular inspection, project inspection and special inspection. Regular inspection checks management system, process safety, facility and work safety, occupational health, firefighting and dangerous substances, and environment. Project inspection is conducted for items required by the management and the safety and environment issues. Planned inspections are conducted on accident reduction, facility safety management, emergency response, and implementation check. Special inspections are performed at the workplaces where serious accidents occurred or are likely to occur. In 2017, a total of 51 safety & environment inspections were made (including 7 regular, 39 planned, and 5 special inspections). In addition, LG Chem plans to conduct not only regular inspection but in-depth inspection for plants with many accidents. It also plans to inspect the facility management system of small plants and the system of newly established plants. LG Chem will continuously inspect the emergency response system without notice in advance to optimize emergency response at plants.

Category	Description
Regular Inspection	Korea Management system, plant safety, facility/work safety, firefighting and dangerous substances, review of follow-up actions from the previous inspection
	Overseas Management system, compliance with safety and environment regulations, plant safety, facility/work safety, firefighting and dangerous substances, review of follow-up actions from the previous inspection
Planned Inspection	Reduction in accident rate Management of accident and risk, accident investigation system
	Management of facility safety Planning, purchase/produce, installation, inspection, repair, maintenance,
	Inspecting follow-up action Review of follow-up actions from the previous inspection (evaluation on improved point and current status)
	Emergency response system Control of overall situations, management of equipment, response competency to media
Special Inspection	Critical disaster, critical industrial accident, frequent accident business spot Basic cause of accident (inspection takes place in case of necessity)

Employee Hygiene and Health Management

LG Chem is implementing activities of preventing diseases and health care to eliminate health hazards and create a pleasant working environment. Employee health offices are operated at each workplace to provide customized healthcare services for employees and provides individual counseling and health information to employees through regular check-ups. In addition, mental health care programs for employees are also available to diagnose, consult about, and treat depressive disorders. Counseling offices are operated by professional therapists to provide proper assistance for employees in need of help in connection with special hospitals. Also, a variety of health promotion programs are offered to spread the culture of health care among employees.

LG Chem strives to go beyond compliance with legal standards for working environment and minimizes potential health-related risks. Therefore, we have decided to improve our working environment even more by establishing internal standards, which are stricter than legal ones. In this way, we will constantly strive to ensure a working environment of the highest safety level in the industry.

Safety Culture Improvement Project

LG Chem has been conducting a safety culture improvement project since October 2016, in cooperation with a consulting organization specialized in global safety and environment, in order to minimize the possibility of incidents caused by unstable behavior and conditions of employees who may exist in the field.

This project consists of the advancement of accident investigation methods, the development of quantitative evaluation method for safety and environmental management system, and the establishment of behavior-based safety (BBS) program. After the completion of the first phase in June 2018, we will promote the project across the company to improve the level of safety management and ultimately achieve zero accidents.

Establishing Quantitative Assessment System for Safety and Environment Management LG Chem has establishedLGCSRS (LG Chem Safety Rating System) which is a quantitative assessment system for safety and environment management to evaluate safety and environment management in a quantitative way and identify supplement points more specifically. This system is designed to quantitatively evaluate the status of the in-house management system, which is organically linked to safety, environment and health, according to 720 evaluation items in each field. By establishing an advanced quantitative evaluation method for safety and environmental management system, we will identify and improve the safety and environmental management

weaknesses at domestic and overseas sites, and thus raise our system to global top-level.

Advancement in Accident Investigation Method LG Chem identifies and root causes of accidents and make improvement, and makes advancement in accident investigation method to prevent similar accidents. For details, LG Chem adopts global cause of accident analysis method, operates a program to nurture professional accident investigators, and upgrades internal and external expert verification system for results of investigations. In 2018, we will extend the scope of accident investigations to overseas workplaces, and continue to monitor the results of investigations, nurture professional accident investigators, and share the cases of accidents.

Advanced Analysis of Causes of Accidents

Promoting Behavior Based Safety Program LG Chem introduces Behavior Based Safety (BBS) programto promote safe behavior and create a culture of voluntary safety management in the workplace by complying with safety standards and procedures. The purpose of this program is to promote safe behavior through praise, and change 'unsafe behavior', the main cause of accidents, into safe behavior through observation and coaching by co-workers. In 2018, we will promote this program throughout the basic materials & chemicals division. In 2019, we plan to spread the BBS program across the company.

Innovation for Safety, Health, and Environment

Safety

Securing Safety for Outdoor Pipes through Preventative Inspection

At the Yeosu Plant, there are outdoor pipes reaching approximately 300km. Yeosu Plant checked buried pipelines by using the Intelligent PIG, damage to sheath by applying electric anticorrosion, and pipes by using Short Guided Wave. Also, an early leak detection system that includes wide infrared camera, fiber-optic hybrid sensor, and wireless gas detector was established based on the IoT technology, allowing to reduce the cost and time of outdoor pipes inspection and to ensure the soundness and management of facilities by eliminating the blind spots of inspection.

1 Above Ground

Short Guided Wave

Check outdoor pipes with the Short Guided Wave equipment. The wave allows to measure thickness of pipes and check whether pipes are rust or not by counting time it takes from ground to pipes.

2 Underground

Intelligent PIG

· It is an equipment with 100 sensors including GPS

· It travels through pipes and check whether pipes are damaged or not

Preventing Accidents of the Same Type and Establishing Safety Culture by Making Cut with Blade Zero

The Cheongju Plant has recorded the highest accident rate in terms of cut with a blade for the past 3 years (from 2014 to 2016) due to the heave use of blades given its characteristics. To resolve this issue, its operation method and equipment were improved to eliminate or replace the jobs using blades, and workers were offered safety gloves and blades. In addition, safety experience training and cases of improvement were promoted to enhance the safety awareness of employees. As a result of these prevention activities, no case of being cut with a blade was reported in 2017.

Ensuring the Safety of Fieldwork by Developing Customized Tools

The intensive observation of high-place work at the Daesan Plant showed that workers were exposed to a number of potential safety risks, such as fire, explosion and accidents. Therefore, a customized tool was developed considering the field situations and operational convenience to make substantial safety improvements. Also, innovative improvement plans were suggested to apply for two patents and shared with other plants.

De-plugging Work	Developing a 3- Type De-plugging Tool considering field situations
Cutting Work	Developing/applying a potable water jet cutter for cutting pipes/steel frames
Welding Work	Developing a protective headgear combined with welding visor against fall/impact

Health

Employee Health Promotion Program

The glass substrate safety and environment team at the Paju Plant had introduced employee health promotion programs. LG Chem improved the program by phase to increase employee participation rate and diversify programs. First, survey takes place to identify needs and improvement of lifestyles (obesity and smoking) program was implemented with local community for more systematic health promotion activity. Also, LG Chem started operating a variety of health promotion programs including prevention of cardiovascular diseases and musculoskeletal disorders, and management of job stress. As a result, more employees have paid attention to their health and participated in health promotion activities.

Health Promotion Programs in Paju Plant

Step 1	Step 2	Step 3	Step 4
Identify needs through satisfaction level over health promotion program	Implement program for improving life style on regular basis	Expand health promotion activity	Actualization and activation of health promotion activity

Environment

Reinforcing Pollution Control System to Ensure Air Quality

The Ochang Plant has made various efforts to improve air quality. The Plant strengthened the management of air pollutants by expanding the coverage of facilities under control, and conducted an objective evaluation of the effects on air quality by operating a real-time monitoring system. Also, to deal with civil complaints from local residents and NGOs, it analyzed odor-causing substances, conducted monitoring on odors, identified odor types, and made improvements.

Responding to Stricter Environmental Regulations through Process Optimization and System Improvement

Recently, the Chinese government has strengthened environmental regulations, such as higher standards for PVC and caustic soda emissions and charges for VOCs emissions. Accordingly, LGCBH cooperated withTianjinEnvironmental Protection Agency and apply the LDAR(Leak Detection and Repair). Applying the LDAR as a trial leads to establishing a quantitative control system for VOCs and cost reduction for VOCs

PROTECTING OUR PLANET

Industry Trends : Change & Response

GHG emissions from human activities have a significant impact on climate change. As the amount of greenhouse gases, such as carbon dioxide and methane, increases in the air, the earth temperature has been gradually increasing. Climate change due to global warming brings about natural disasters, such as droughts, floods, heat waves and super typhoons, and causes damage to crops, ecosystems, and industrial facilities.

According to the 2015 Paris Climate Conference, many countries around the world are continuing their efforts for GHG emissions reduction to limit the global average temperature rise to 2 degrees Celsius. Korea has finalized its 2030 target of reducing GHG emissions by 37 percent from business-as-usual (BAU) levels, and implemented various policies to reduce GHG emissions, such as GHG emissions trading system.

Meanwhile, companies can be affected by direct investment in greenhouse gas reduction and the cost of purchasing emission credits, and there may be physical risks that affect product production due to climate change, such as droughts, typhoons and natural disasters.

LG Chem recognizes these changes not only as a risk, but also as an opportunity, and continues its effort to deal with climate change with a focus on greenhouse gas and energy management.

Strategy : Risk & Opportunity

LG Chem is actively responding to climate change issues at home and abroad and utilizing them as an opportunity to secure competitiveness. We are reducing GHG emissions by conserving energy through process improvements. We are also directly or indirectly preparing for climate change by producing high value-added products and low-energy consumption products. In addition, we utilize climate change issues as an opportunity to expand our business portfolio through various R&D projects. LG Chem is building a new business portfolio of energy, water and biotechnology in its fossil fuel-based materials business. In particular, electric vehicle batteries and energy storage systems (ESS) are contributing to creating a sustainable ecosystem that reduces GHG emissions.

Evaluation

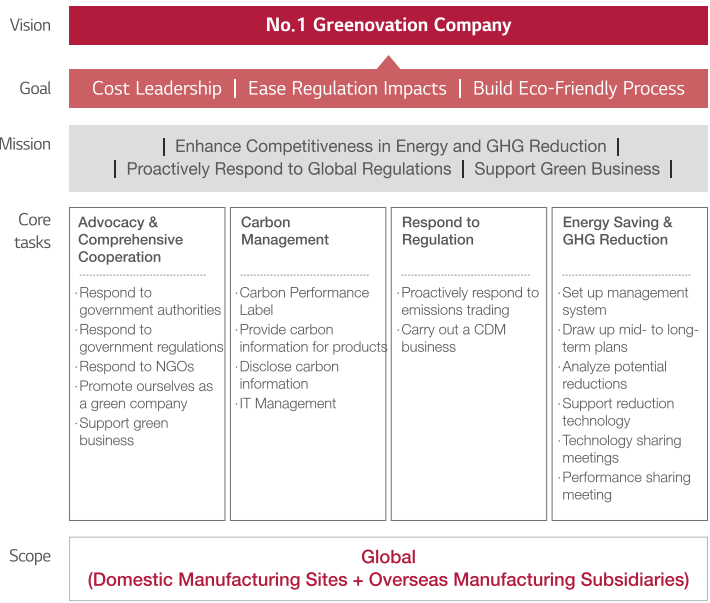

Approaches to Climate Change

LG Chem has selected climate change as a major issue to deal with, and implemented a variety of activities while responding to domestic and foreign regulations on energy and GHG reduction in a proactive manner.

Climate Change Response System

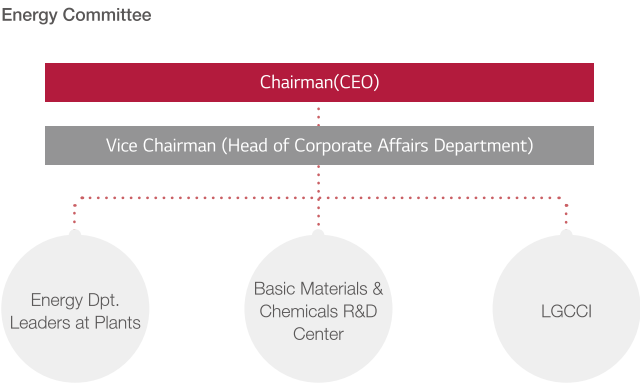

LG Chem is continuing its efforts for energy and GHG reduction at workplaces to cope with climate change. The Company is actively engaged in the government's climate change policies and minimizing the impact of changes in domestic and international energy policies

Through this effort, we intend to contribute to the achievement of the GHG reduction targets of the industry as a whole by strengthening our corporate competitiveness and supporting the energy saving investments of our partner companies.

Organization for Climate Change Response LG Chem has established and implemented an enterprise-wide energy management policy through the Corporate Energy Committee. Consisting of the CEO and plant managers, the Committee shares energy and GHG-related activities of the year and plans for the following year, and also decides on important matters. In addition, energy subcommittees are operated at each workplace to report annual reduction targets and energy management status on a monthly basis. At the same time, we share energy conservation cases of each workplace through energy

technology exchange meetings, and promote energy conservation by giving an award for best practices. We are also actively responding to regulations on GHG emissions at home and abroad, and operating the Corporate Energy and Climate Team, a specialized organization for the management of energy use and reduction targets. Through the Team, we support the management of energy use and reduction, operation of GHG emissions trading system, and response to customers' climate change information and government's energy policies in cooperation with relevant departments.

Energy LG Chem is making efforts to improve its energy management by establishing an energy management system (ISO 50001) at domestic and overseas business sites. By doing so, we manage the energy intensity of our workplaces every month. We also set an energy saving target every year and continue efforts to improve the process and introduce new technologies. In addition, we share examples of energy conservation at our workplaces through workplace exchange meetings and energy portals, and encourage employees to reduce GHG emissions through energy conservation. Furthermore, we reward the best practices of energy saving.

Energy Use (Unit: TJ, GJ/product ton)		2015	2016	2017
Korea	Direct	90,257	97,622	98,896
	Indirect	49,793	50,565	54,462
	Total	140,035	148,187	153,358
	Intensity	9.343	8.968	9.081
Overseas	Direct	1,783	1,868	3,103
	Indirect	9,286	8,608	8,399
	Total	11,069	10,476	11,502
	Intensity	5.199	4.921	5.048

Greenhouse Gas LG Chem has established the Greenhouse Gas&Energy Management System (GEMS) to deal with the government regulations and financial risks resulting from the introduction of emissions trading system, and come up with procedures and strategies

for the operation of emission credits. In order to positively respond to the risks associated with the cost of purchasing emission credits, the cost of purchasing emission credits is reflected in production costs every month. Also, in response to the volatility of the market, a strategy for purchasing emission credits has been established to make a purchase according to market conditions. In addition, we have prepared a manual for training those in charge of each workplace on the emission trading system, and shared important issues related to energy and climate change at home and abroad with worksites

Scope 1, Scope 2 Greenhouse Gas Emissions (Unit: tCO ₂ -eq, tCO ₂ -eq/product ton)		2015	2016	2017
Korea	Direct	4,815,354	5,119,076	5,116,711
	Indirect	2,385,513	2,319,920	2,547,469
	Total	7,200,851	7,438,996	7,664,180
	Intensity	0.480	0.450	0.454
Overseas	Direct	110,394	129,587	142,109
	Indirect	1,407,502	1,574,172	1,549,883
	Total	1,517,896	1,703,759	1,691,992
	Intensity	0.713	0.828	0.743

Scope 3 Greenhouse Gas Emissions (Korea) (Unit: tCO ₂ -eq)		2015	2016	2017
Wastewater discharge		18,313	20,491	19,259
Waste disposal		12,354	13,524	12,686
Water use		5,595	5,836	6,127
Employee business trip		2,188	2,478	2,640

- * Date of scope 3 greenhouse gas emissions is limited to domestic sites
- * Amount of wastewater discharged: Multiplying GHG emission factor for disposal (source: Korea Environment Corporation)
- * Waste generation: Multiplying GHG emission factor per waste type (source: Korea Environment Corporation)
- * Water usage (industrial and municipal water): Multiplying GHG emission factor for consuming water (source: Korea Environment Corporation)
- * Business trip: Multiplying GHG emission factor for travel distances by motor vehicle (source: Korea Environment Corporation)

Green Business LG Chem strives to research and develop high-efficiency electric vehicle batteries and energy storage system (ESS) batteries, thereby reducing greenhouse gas emissions at the stage of product use by consumers and contributing to the nation's energy demand and supply management. We are also working to expand solar and ESS facilities at domestic and overseas worksites.

Responding to Climate Change in Manufacturing Process

LG Chem has conducted a series of activities to cope with climate change by minimizing greenhouse gas emissions from the manufacturing process. We strive to increase energy efficiency through the improvement of manufacturing process, and introduce new and renewable energy and ESS facilities.

GHG Reduction

Setting GHG Reduction Target LG Chem has established greenhouse gas reduction goals as well as a 23% reduction of BAU by 2020 and mid/long-term energy intensity saving goals with an overall aim to reduce greenhouse gas emissions and energy consumption. LG Chem continues improvement activities to achieve the goals and has consequently achieved its annual reduction goal every year. We are establishing long-term plans for greenhouse gas reduction and energy use after 2020, and considering plans to expand the use of new and renewable energy to introduce eco-friendly energy sources. In the future, LG Chem will continue its activities to reduce greenhouse gas emissions and save energy in line with the 2030 national roadmap for greenhouse gas reduction.

Enhancing Portfolio for Carbon Emission Trading Since the implementation of the emission trading scheme in 2015, LG Chem has made various efforts to reduce operating risks due to regulatory compliance. First, we are minimizing financial risk by introducing a system that analyzes monthly GHG emissions compared to the allocated emission allowances and reflects estimated costs in advance. In addition, we are operating the 'Council on Emission Credit Purchasing' regularly to make reasonable decisions, and establishing purchasing strategies for each planning period based on the 'Purchase Guidelines'. In particular, in 2017, we established eight guidelines for

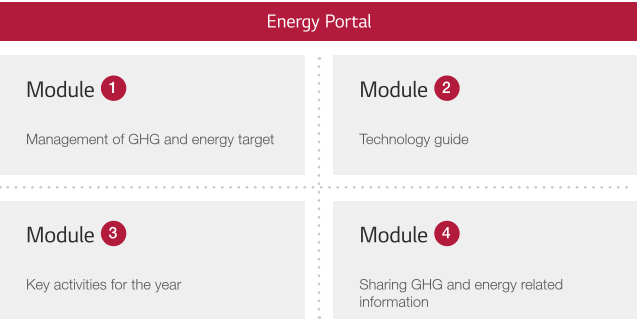

climate change management, including 'Response to the Regulations on Climate Change', and reestablished systematic business process and internal role and responsibilities for the second phase of the emission trading scheme, which will start in 2018.

Energy Saving

Expanding ESS at Workplaces The introduction of Energy Storage System (ESS) contributes to stabilizing the national power demand and the supply of renewable energy, thereby restraining further construction of power plants. LG Chem is expanding the spread of ESS in order to increase the energy efficiency of its business sites and to reduce electric power costs. The ESS of 50.2MWh in total has been installed at the Iksan, Ochang and Yeosu Plants, and the ESS of 83MWh will be added to 5 worksites by the second half of 2018. Going forward, LG Chem will strive to improve energy efficiency through the expansion of ESS facilities and the introduction of photovoltaic facilities.

Improving Energy Technology Database LG Chem supports the activities for energy/GHG reduction at its workplaces by operating an energy portal system. We manage energy and GHG target indicators through the energy portal, and share key activities and issues for the year. In addition, we manage the cases of energy-saving technologies at each workplace in a database. In particular, we upgraded our technology database in 2017 and uploaded about 1,000 energy-saving technologies. In addition, to increase the utilization by those in charge of each workplace, we have assigned a rating to each energy reduction technology and subdivided the technical classification. At the same time, we have added the internal and external audit function to the ISO 50001 energy management system in order to support the efficient operation of the energy management system at workplaces. LG Chem publishes the Energy/Greenhouse Gas News Letters and shares key issues with work sites to support in-charges to identify and respond to relevant issues in energy and greenhouse gas.

Receiving Energy Champion Certificate LG Chem's Cheongju Plant and Yeosu PC Plant were certified as Korea's first energy champion by Korea Energy Agency in 2017. The energy champion is a system that objectively measures the energy-saving performance of workplaces and certifies the company that voluntarily made efforts to improve energy efficiency as an energy champion. The Cheongju Plant and Yeosu PC Plant were certified as an energy champion by achieving a 6.14% reduction in energy intensity for four years and a 3.17% reduction in energy consumption for 2016, respectively. LG Chem will continue to expand its business sites that receive energy champion certificate through continuous efforts to conserve energy and engagement in relevant projects.

Ceremony of Energy Champion Certificate

Expanding Energy Diagnosis LG Chem's engineers are striving to increase energy efficiency through process improvement. The analysis of the process enables them to discover and apply various ideas for improvement including recovery of waste heat, introduction of energy saving technologies, and improvement of facilities. Also, a number of energy diagnoses are made to reduce energy consumption.

In 2017, a comprehensive diagnosis of electric power equipment was conducted for the first time. In the past, our energy saving efforts used to focus on the reduction of fuel and steam consumption, but now have moved to the improvement of power efficiency. As a result

of the diagnosis, we could discover power saving items worth about 900 million won. The specifications and operation status of power facilities at workplaces were measured and the results were stored in a database so that the efficiency of each facility can be systematically analyzed and managed. Through these efforts, we have developed improvement plans, such as replacement of low-efficiency equipment and enhancement of power quality, and established investment plans accordingly. LG Chem will continue to carry out various energy diagnoses and reduce energy consumption at its workplaces by strengthening the capabilities of engineers.

Responding to Climate Change through Product Development

LG Chem makes a positive impact on climate change at the stage of product manufacturing by saving energy and also at the stage of product use by introducing eco-friendly products. In addition, we analyze and disclose carbon information of our products to enable customers that manufacture products with our raw materials to effectively respond to climate change. Also, we transparently disclose the environmental information requested by our customers.

Communicating with Customers

The efforts of companies to respond to climate change have emerged as an important evaluation index for investors and customers. LG Chem reports on greenhouse gas emissions, emissions trading transactions, and energy consumption through its sustainability reports and annual reports, and also annually discloses LG Chem's response system to climate change and current status through DJSI and CDP for domestic and overseas investors. In addition, upon the request of customers, we publish the Life Cycle Assessment (LCA) reports by analyzing the greenhouse gases emitted throughout the entire manufacturing process from raw materials to disposal, and strive to expand carbon footprint-certified products. We are also actively engaged in the government's GHG and energy policies, such as emissions trading system, energy diagnosis and joint projects with SMEs, in cooperation with government agencies.

Sustainable Products

LG Chem contributes to the corporate and social response to climate change by developing products for the sustainable development of society. We are concentrating our research and development capabilities on developing products that can protect

the environment of our planet, such as automotive batteries, ESS batteries, and water treatment filters, and improving their performance.

LG Chem contributes to the spread of eco-friendly electric vehicles through the production of automotive batteries. Our automotive batteries have gained a competitive edge in the EV battery market with major Supplier Awards by global automakers and secured orders for key electric vehicle projects.

Automotive Battery

Our ESS batteries maintain a strong global partnership by expanding orders for large-scale power grid projects and entering into a long-term supply contract with major power generation companies, and contribute to the efficient use of renewable energy sources.

ESS Battery

Through the water treatment business, we contribute to overcoming the shortage of water at the global level and strive to make everyone drink clean water.

RO Membrane (Water Treatment Membrane)

GETTING ENGAGED WITH PARTNERS

Industry Trends : Change & Response

Global companies operate business in a complicated supply chain from raw materials to final product stage. In past, business management activities were considered for evaluating companies' sustainability. However, the responsibility for impact on economic, social, and environmental in overall supply chain is required in present.

Stakeholders require transparent information disclosures for overall supply chains, and companies are not possible to guarantee their sustainability without responsible supply chain management and shared growth with suppliers. In particular, Amnesty International raised the issue of child labor for cobalt, which is a key material for EV's battery, mining in the Democratic Republic of the Congo in 2016, and required global companies' active responses. As a result, global companies are required to manage risks such as human rights, safety and health, and environment, etc. with suppliers, and foster a sustainable supply chain with supports for mutual growth.

Strategy : Risk & Opportunity

As the competitive landscape in the chemical industry extends to competition among corporatesupply chains including suppliers, mutual cooperation and growth with excellent suppliers to enhance market competitiveness have become essential elements of corporate sustainability management. LG Chem strives to build strategic partnerships with its suppliers based on mutual trust. In addition to making mutual growth agreements with our primary and secondary suppliers, we are also committed to creating a fair trade culture. We are operating support and cooperation programs in various fields, including finance, environment, capacity building, and communication. In addition, we are fulfilling our social responsibilities in overall supply chain.

Evaluation

CSR Audit of Suppliers (Unit: case)

*Operating CSR audit of suppliers since 2016

Strengthening Suppliers for their Sustainable Growth

To achieve a balanced development of the corporate ecosystem, LG Chem is strengthening the basis for mutual and sustainable growth with its partners, beyond providing mere support.

System for Supplier Partnership Promotion

Shared Growth Strategy LG Chem actively promotes the shared growth based on sound cooperation culture under the shared growth's 5 major strategies for the sustainable growth with suppliers. Our shared growth activities are categorized into various sectors: fair trade, financial support, safe environment and energy, capacity building of suppliers, and communication. We believe that our supplier's competitiveness is our competitiveness, and make strong efforts to ultimately enhance their sustainability in the economic, social, and environmental aspects by extending support to secondary suppliers.

5 Strategies

Shared Growth Organization LG Chem has organized the Shared Growth Steering Committee, which is a company-wide supreme resolution body under the CFO as the president to systematically practice shared growth and support suppliers. In 2017, four members

were added to the Shared Growth Steering Committee including the executives in charge of logistics and IT to review LG Chem's shared growth activities and expand the range of support. The committee discusses important issues related to shared growth and examines detailed activities by participation of main sectors including fair trade, finance and economy, and R&D. In addition, the corporate CSR team plans and manages company-wide shared growth activities such as support to suppliers and management of CSR risk of suppliers and workplaces.

Communication with Suppliers LG Chem regularly holds a meeting with suppliers to share business status and issues and listen to their opinions. In 2017, the Yeosu Plant held a "Mutually Beneficial Hanmadang" for construction partners, expanding the scale of meetings held in the past to create a venue for mutual communication. In addition, LG Chem has its management visit suppliers' production sites and tries to improve difficulties in the collaboration and trade process. In order to strengthen the rechargeable battery business, which is one of LG Chem's future core businesses, in 2017, the CEO visited two partner companies of the Energy Solutions Division and had a time to directly check and communicate at production sites. In the future, we will strive to establish a healthy culture of cooperation by examining the improvements during the collaborative process through ongoing meetings with and CEO visits to partner companies.

External Activities The CFO of LG Chem is participating in the Mutual Growth Committee as a member on behalf of the LG Group and the chemical industry as a whole, and is also working with the government to discuss mutual growth issues and to spread the culture of mutual growth.

Financial Support

Funding LG Chem conducts financial support activities such as direct financial support, shared growth fund, network and family loan, and shared growth investment resources for smooth fund operation of suppliers. The direct financial support which is a loan program to support new investment of suppliers directly grants no-interest loans

through recommendation of an applying supplier and 2 examinations by a department of finance and economy.

The shared growth fund is a low interest loan fund designed to solve financial difficulty of suppliers. LG Chem has raised a fund of KRW 62.9 billion, and provided financial support for its partners with the benefit of interest rate cut of 2.35%p which increased from 1.0%p. In 2017, we expanded the financial support for secondary suppliers by 20% from the previous year, and will further increase the amount to strengthen the competency of our supply chain. The company also supports research and development, development of human resources, increase of productivity, entering overseas markets, and energy saving by creating shared growth investment resources to strengthen suppliers' capability.

Status of Financial Support to Suppliers (accumulated) (Unit: KRW billion)

	2016	2017	2018 target
Direct Financial Support	5	6	7
Shared Growth Fund	69.8	81	90
Investment Resources	0.3	0.4	0.5

Operating the Shared Growth Payment System LG Chem introduced the Shared Growth Payment System to reduce the financial burden placed on suppliers. This system is a safety payment method with no recourse that secondary and tertiary suppliers can encash bonds issued by large companies early at a main bank with credit equal to large companies. Through this, primary suppliers can pay for delivered goods by issuing shared growth bonds to secondary suppliers. Since the interest rates for large companies are applied, financial expenses can be saved on the part of suppliers. In 2017, we increased the amount used in the Shared GrowthPayment System by about 25%. Moreover, we supportedmore monetary flows to secondary suppliers and encouraged primary suppliers to take a part in the system.

Operating Procurement Portal LG Chem operates the Procurement Portal by computerizing all purchasing processes including suppliers' registration, order, bidding, contract, etc., and makes them simply treat reception and transmission, and preservation of various documents necessary for trade. Through this, LG Chem provides the transaction environment that suppliers can trust by increasing transparency in transaction procedures and convenience of work.

Eco-friendly Manufacturing Process

Promoting Mutual Growth Business in the Energy Sector LG Chem signed an MOU with the Korea Energy Agency to provide various support to its customers and suppliers throughout the entire process from education on energy saving, diagnosis, investment to performance management so that they can build their own energy management systems. Every year, selected client companies and suppliers are provided with support for the development of the greenhouse gas inventory and management tools. In addition, the Energy Shared Growth Fund, currently amounting to KRW 4 billion, has been formed to create financial support for such projects. In 2017, we selected 10 small to medium-sized customers and suppliers for energy diagnosis, and found 50 energy saving technologies, which led to 1,573 tons of greenhouse gas reduction per year and KRW 400 million worth of energy cost saving. Excellent energy saving technologies were selected and directly/indirectly supported through investments, contributing to their reduction of GHG emissions and creation of profits.

Support for the Greenhouse Gas Reduction of Small/Medium-Sized Companies LG Chem implements 'Green Credit' businesses to support the greenhouse gas reduction of small/medium-sized companies. The Green Credit businesses facilitate the greenhouse gas reduction of small/medium-sized companies through cooperation between large companies which have financial resources and technology but low reduction potential for greenhouse gases, and small/medium-sized companies which have high reduction potential but lack funds and technology. This way, companies subject to regulations can relieve the burden. LG Chem contributes to achieving the national greenhouse gas reduction goal by finding small/medium-sized companies which have high reduction potential for greenhouse gas and introducing facilities to improve process efficiency. In addition, such efforts are recognized as LG Chem's greenhouse gas reduction so that the company relieves the burden to reduce greenhouse gas emissions. LG Chem provides technical and financial support for small/ medium-sized companies' emission reduction to contribute to the reduction of greenhouse gas emissions and mutual cooperation among large and small/ medium-sized companies.

Enhancing Global Competitiveness of Suppliers

The enhancement of our suppliers' global competitiveness naturally leads to that of our own competitiveness. In this regard, we consider our suppliers as partners who grow together to enhance our competitiveness and value.

Recruiting and Training Support for Suppliers

Supporting Talent Recruitment LG Chem has been providing various support for the recruitment of suppliers so that they can secure excellent talents and enhance their competitiveness. In addition to helping them take advantage of LG Chem's brand image in job fairs organized by the government agencies, etc., we are providing certain amounts of subsidies to the SMEs in need of funding for their recruitment. In 2017, the amount of subsidies is increased to over 300% compared to the last year, and LG Chem will contribute to remove wage disparity through increasing the amount of subsidies every year.

Training Suppliers' Employees LG Chem operates 'Polymer Processing School' to deliver its technical know-how on designing and developing plastic products to the employees of suppliers. The training course covers the basics of plastics processing, including basic knowledge on plastic and injection molding, to strengthen the expertise of suppliers' employees. Online training sessions on language, professional duties, and general management are also available at the LG Academy, a training institute designated by the Korean Ministry of Labor. In 2017, liberal arts were added to the program, and a total of 218 employees from 47 suppliers have received training.

Strengthening Suppliers' Technical Capacity

Supporting technology and overseas markets To raise the export competitiveness of its small to medium-sized suppliers, LG Chem helpsthem effectively respond to various foreign regulations on exports. We also participate in overseas exhibitions together with our suppliers to help them experience various technology trends and give them opportunities to promote themselves through overseas marketing activities. In addition, the R&D, production and technology divisions are leading the transfer of technical know-how through various services and tailored solutions to strengthen our suppliers' technical capacity. We provide a window through which our partners can suggest additional development or commercialization of their own technologies or materials in cooperation with us to achieve mutual growth.

Patent in 2017

※ 2 cases of patent transfer in 2016 became business activity.

Supporting Suppliers' Productivity Improvement and Exports

Participation in Production Innovation Partnership LG Chem is participating in the production innovation partnership held by the Ministry of Trade, Industry and Energy and the Large & Small Business Cooperation Foundation to support suppliers' export competitiveness and increase of productivity. We are enhancing the competitiveness and self-sufficiency of our partners by providing consultation on productivity improvement and supporting the incidental cost for export. We provide innovative solutions for productivity improvement in the management and manufacturing fields by finding productivity improvement tasks suited to the characteristics of each partner, and support the direct costs for exporting (tariffs, logistics agents, etc.).

Performance in 2017

Total Funds	KRW 112.3 million	Financial Impact	KRW 53 million/company
Number of Participating Company	5 companies	Increase in Sale	32.6%
Productivity	213% improved	Increase in Export	27.3%
Quality	333% improved	Productivity of Added Value	11.7%
Man Moral	125% improved		

Best Practice

Case of Technology Cooperation with Supplier

Daejoo Kores

Daejoo Kores is a company that makes box-shaped 'Lower Case Housings' for electric vehicle battery packs. Through technology cooperation with LG Chem, we have developed the world's first aluminum-based large-capacity battery pack housing product. Compared to iron, aluminum is 3 times lighter and has 9 times higher thermal conductivity, which means aluminum products can reduce their weight to 1/3 (300kg → 100kg) of the conventional iron products. It also boasts higher battery efficiency thanks to faster cooling speed during battery recharge or discharge. Daejoo Kores's welding technology and LG Chem's technology to control precision processes made strong synergy effects, resulting in the introduction of a new aluminum product in December 2017.

LG Chem will continuously put efforts in business for future with partners, and plan to secure the growth engine to grow together through the development for new technology and new products.

Managing CSR Risk in Supply Chain

Recently, more attention is being paid to ethical purchase of raw materials including minerals used in products. Major stakeholders, such as customers, NGOs and investors, are demanding a comprehensive resolution of the CSR issues surrounding specific raw materials, including human rights and environmental issues, and their expectationshave significantly increased.

LG Chem's Sustainable Supply Chain Management Process

Establishing Code of Conduct for Suppliers In 2016, LG Chem established the 'Code of Conduct for Suppliers' that consists of 10 items including human rights and labor, ethical management, safety environment, and ethical purchasing. In 2017, the use of conflict minerals and raw materials sourced through unethical methods that involve illegal and serious human rights violations was prohibited. In addition, we have established a due diligence policy to strengthen the monitoring on the concerned raw materials.

Conducting CSR Evaluation on Suppliers To build a sustainable supply chain management system, LG Chem is conducting CSR evaluationson suppliers in linewiththeir purchase evaluations (regular evaluation, new company evaluation for registration). The regular evaluations are performed on about 240 raw material manufacturersfor 52 evaluation items, including prohibition of child labor, protection of workers, compliance with working hours, management of conflict minerals, and assessment and elimination of safety and health risks. New company evaluation for registration is undertaken on new raw material manufacturers for 10 items in the CSR field, which is reflected in the overall company evaluation. For regular evaluations, suppliers perform a self-evaluation with their own CSR checklist, and high-risk entities are selected for on-site inspections. On-site inspections were conducted for two companies in 2016, three companies in 2017, and six companies in the first half of 2018. In the future, we plan to strengthen the CSR risk management in our supply chain by expanding the coverage to China and other regions.

Analyzing Evaluation Results The results of CSR evaluation on suppliers showed that they mostly have high compliance with domestic laws, including the Labor Standards Act and Occupational Safety and Health Act, but have poor CSR management processes (evaluation,

management of conflict minerals). To be specific, key improvement areas included compliance with working hours, elimination of discrimination factors, provision of protective gear, identification of prohibited work for the protected workers, and establishment of process to respond to chemical leaks. LG Chem will continuously encourage its suppliers to comply with domestic and international CSR standards.

Evaluation Results of Supplier CSR Inspection by Sector (as of the first half year of 2018)

Working Environment and Human Rights	Ethical Management	Supplier CSR	Safety, Health, Environment	Total
81.3	72.7	52.9	94.5	85.4

*Out of 100

Monitoring Improvements LG Chem includes a clauseon social responsibility in the standard purchase agreement so that suppliers can recognize the importance of CSR from the contract phase and be committed to making improvements whenever major CSR risks are found. Based on the purchase agreement and Code of Conduct, we will require them to make continuous improvements and conduct monitoring on their social responsibilities.

Purchasing Risk-free Raw Materials

Making Efforts for Responsible Procurement of Minerals Various stakeholders including customers, investors and NGOs are demanding a responsible mineral supply chain, and also a response to the issue of conflict minerals. Conflict minerals include four minerals (tin, tantalum, tungsten and gold) mined in conflict areas, such as the Democratic Republic of the Congo (DRC) and its neighboring countries. LG Chem has establisheda policy to prohibit the use of conflict minerals from the procurement of raw materials in order to prevent the violation of human rights, exploitation of labor, loss of lives and environmental pollution in these areas. As part of such efforts, we are monitoring suppliers that handle the four minerals above, and check whether they useconflict minerals. Also, we collect and manage refinery information for these minerals, and use the IT system to monitor the ingredients of the materials procured by our suppliers. LG Chem's suppliers are also given the Green SCM Guideline that prohibits in principle the use of conflict minerals. Furthermore, four companies within the LG group (LG Chem, LG Electronics, LG Display, and LG Innotek) formed a council to share policies on conflict minerals management every year, and are carrying out activities to encourage all of their partner companies to prohibit the use of conflict minerals.

Global DRC cobalt production

More than 60%

DRC cobalt production from ASM

20%

The Democratic Republic of the Congo

The Cobalt Issue

Cobalt is the raw material of lithium-ion batteries used in mobile devices and electric vehicles. Due to the recent rise in demand for electric vehicles, the price of cobalt has also been increasing. More than 60% of the global cobalt production comes from the Katanga area, located in the southern part of the Democratic Republic of the Congo (DRC).

In January 2016, Amnesty International published a report to raise the issue of child labor during the cobalt mining process, which led cobalt to be considered equivalent to conflict minerals. In November 2017, the organization published a follow-up report to disclose the improvements made with regard to the human rights issues in the supply chain. LG Chem received a positive evaluation for taking proper measures, but the cobalt supply chain issue is no longer confined to child labor but is now expanding to the overall social responsibility including the safety and health of workers and pollution, etc.

Participating in the Establishment of Policies and Initiatives

LG Chem recognizes that the issue raised by the Amnesty International report regarding child labor in the cobalt mining process in the Democratic Republic of the Congo (DRC) is a significant global human rights issue in a conflict area, and has established a Due Diligence Policy by revising the Code of Conduct for Suppliers and Eco-friendly SCM Guidelines. LG Chem's due diligence policy defines a 5 steps framework according to the 'OECD Due Diligence Guidance for Responsible Supply Chains of Minerals from Conflict-Affected and High-Risk Areas,' and designates cobalt as a material under control, which is equivalent to a conflict mineral. LG Chem is also participating in the Responsible Cobalt Initiative (RCI), which is organized by the China Chamber of Commerce of Minerals, Metals and Chemicals (CCC MC) and sponsored by the OECD with the participation of the DRC, NGOs, and upstream/downstream business entities related to cobalt production. Through the joint efforts with these related organizations, we will make best efforts to fundamentally resolve the child labor issue.

Sustainable Supply Chain Management

Cobalt in the Supply Chains

Supply Channel of Cobalt

Conducting On-site Inspections

LG Chem conducted a CSR Audit on its primary suppliers (cathode material manufacturers) to confirm whether they change the country of origin and also how they respond to secondary suppliers with regard to the cobalt issue. We have also uploaded a cobalt supply chain mapping on our website for stakeholders. A third party audit was conducted on the cobalt refineries and precursor suppliers, which are at the center of the cobalt child labor issue. A due diligence was conducted by the headquarters to review the policies and action plans in resolving the issues of mass balance and child labor in July 2017, and another due diligence was performed to check the status of child labor in the ASM of the DRC in April 2018. The issue was initiated by cobalt, but has been spreading to other core raw materials for batteries, such as lithium, nickel, manganese, and graphite, which means responsible procurement of minerals has become more important. In this regard, we are closely cooperating with our stakeholders, automotive battery companies in particular, to establish a sustainable supply chain for cobalt and other core raw materials used for batteries.

RESPECTING THE EMPLOYEES

Industry Trends : Change & Response

As companies expand their influence on society, demand is growing for the protection of and respect for human rights at their workplaces. Respect for human rights in companies is becoming internationally standardized, and various moves are being made to enhance the value of employees.

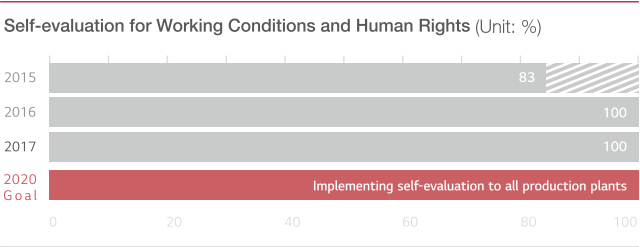

For LG Chem, which operates a number of global business sites, complying with international conventions and standards on human rights stipulated by the Universal Declaration of Human Rights, the Ten Principles of the UNGC, the UNGP, and the ILO Core Conventions is an integral part of its business operations. The corporate responsibility for human rights is also clearly stated in the draft of the third national human rights policy. Companies must fulfill their responsibility for respecting human rights in accordance with international standards; partners or suppliers should prevent violations of human rights in supply chains; and the government needs to improve relevant support, laws, policies and systems.

Given the nature of the chemical industry, which has a manufacturing process, the management of employees' working conditions and human rights is crucial to ensure business competitiveness. The occurrence of human rights risks affects financial performance, brand image, and consumer confidence. Enhancing corporate sustainability through dealing with human rights issues as part of risk management and protecting the human rights of our employees is important.

Strategy : Risk & Opportunity

The 'LG Chem Global Human Rights & Labor Policy' was established in 2016 as part of the efforts to promote its management philosophy of "People-oriented Management". Also, according to a human rights management process, a CSR self-diagnostic tool is used to assess human rights issues and risks related to employees and to identify potential human rights risks in advance.

Evaluation

* Evaluation implemented for overseas sites include only China plants in 2015

Human Rights Management System

LG Chem respects the human rights of its employees, and supports the human rights protection and labor standards of international organizations in order to fulfil the responsibility to respect human rights throughout its management activities.

Human Rights Policy

LG Chem actively supports international standards related to human rights and labor, including the Universal Declaration of Human Rights, the UN Global Compact, the ILO Labor Conventions, and the UN Guiding Principles on Business and Human Rights, and strictly complies with labor laws in all countries and regions of its business operation. Based on its management philosophy of "People-oriented Management," LG Chem promotes the guarantee of and respect for human dignity, freedom and happiness as fundamental values. In 2016, the 'LG Chem Global Human Rights & Labor Policy' was enacted. This policy applies to all workplaces at home and abroad and is posted on the LG Chem website.

Human Rights Management Process

Every year, LG Chem identifies risks related to working conditions and human rights by using a CSR self-evaluation tool and develops improvement tasks.

Inspections are conducted on the following areas: the operation of the Grievance Handling System, the prohibition of child labor and forced labor and the protection of underage workers, the prevention of discrimination and sexual harassment, the compliance with legal working hours, the implementation of weekly holidays, the payment of fair compensation, the reduction of wages, and the retention of employment after childcare leave. And self-evaluations are made at all domestic and overseas production sites including the head office and the Daejeon Technical Research Institute.

After the self-evaluation, on-site inspections are conducted together with a third-party organization. The on-site inspections aim at identifying best practices and improvement tasks by sector and performing improvement activities. The results are monitored and complemented with the self-evaluation of the following year.

Risk Management Process of Working Conditions and Human Rights

LG Chem Global Guidance on Human Rights and Labor

Humane Treatment

We strive to create a safe working environment without any inhuman treatment or threat, such as mental or physical coercion and verbal abuse, and to treat all employees respectfully.

Prohibition of Forced Labor

We do not unfairly restrict physical freedom or force labor against the will of employees. The terms of employment do not require the submission of the original copies of identity card, passport or work permit.

Prohibition of Child Labor

We abide by the minimum age of employment set forth in each national or local law, and prohibit child labor under 16 years of age. We do not assign hazardous work to the youth under 18 years of age in terms of safety and health.

Prohibition of Discrimination

We provide employees with equal opportunities for recruitment, promotion, compensation, and training, and prohibit discrimination based on gender, age, race, religion, union activity, disability, pregnancy, marital status, and social status.

Working Hours

We comply with the regular, overtime and non-working hours regulations set forth in each national and local law, and do not force employees to work beyond the regular working hours. For overtime work, overtime pay based on relevant laws is paid.

Wage and Welfare

We pay all employees a salary equal to or exceeding the minimum wage set forth in each national and local law.

Freedom of Association

We recognize freedom of association and collective bargaining guaranteed by each national and local law, and create an environment where employees can communicate smoothly with the company without fear of threats or retaliation. In addition, we ensure employees are not unfairly treated for reasons such as formation, membership and activities of labor unions.

Those Vulnerable to Human Rights Violations and Improvement Plans

LG Chem identifies groups vulnerable to human rights violations based on major human rights risks defined within 'LG Chem's Global Human Rights & Labor Policy', 'Employment Rules', and 'Labor Standards Act', and implements various measures to mitigate those risks.

Groups Vulnerable to Human Rights Violations

- 1 Production and Technical Employees

→ Due to the nature of the manufacturing process, repetitive work over a long period of time can pose a threat to the health and safety of employees.
- 2 Pregnant Employees

→ Pregnant employees, including those who are pregnant or at less than one year after giving birth, should be protected for their health and safety.
- 3 Child/Underage Workers

→ Child labor must be forbidden for the growth and health of the child, and the work of underage workers must be restricted by law.

Mitigating Measures

- 1 Discussing various issues of working conditions and preparing improvement plans through quarterly labor-management council and annual collective bargaining
- 2 Implementing various maternity protection programs. Determining the retention rate after returning from parental leave. Prohibiting pregnant employees from night/overtime/holiday work
- 3 Identifying and prohibiting child labor. Excluding minor workers from legally designated dangerous/hazardous work. Restricting underage workers from night/holiday work

Human Rights Assessment

As a result of the self-evaluations in 2017, there were no violations of legal requirements for child or under-age workers at all domestic and overseas production sites. With regards to working time, which is the most important human rights issue in Korea as well as in the global society, we sampled the number of working people per workplace* to determine the working hours of production and technical employees. In 2017, we observed the compliance with working hours at all of our global production sites and achieved a compliance rate of over 90%.

* Sampling method: Depending on the size of production staff, samples were selected with similar proportions by section/process (10 people from 1 to 100 people, 15 people from 501 to 1,000 people, 20 people from 1,001 to 2,000 people, 25 people from 2,001 to 3,000 people and 30 people from over 3,000 people).

Evaluation on Working Condition and Human Rights (Unit: %, case)

	2016	2017
Compliance with child labor standard	100	100
Compliance with working hour standard (60 hours per week)	85	94
Reduction of wages status	0	0

Major Human Rights Protection System and Culture

As part of the efforts to protect the labor and human rights of employees, LG Chem regularly identifies factors that have a negative impact on human rights, and makes continuous improvements.

Prohibition of Employee Discrimination and Respect for Diversity

LG Chem provides opportunities for recruitment, promotion, compensation and training equally to all employees through the prohibition of discrimination in its global human rights and labor policy. It also prohibits discrimination based on gender, age, race, religion, union activity, disability, pregnancy, marital status and social status. In addition, HR policies and employment rules also specify recruitment without discrimination based on race, nationality, gender, religion, disability, region, affiliated groups, etc.

LG Chem conducts various programs to train talented people and allow them to enter the company to contribute to balanced development of local economy and solving youth unemployment. In 2016, the company established the LG Smart Convergence Engineering Department in Pusan National University and Chonnam National University to train professional personnel suitable for the industrial characteristics. In addition, it signed the 'Battery Customized Trach Agreement' with Chungbuk National University to train engineers in natural sciences or engineering specialized in battery business in the Chungbuk area.

Ratio of local talents* among new administrative and technical employees in 2017

31 %

*Local talents: excluding talents from Seoul, Gyeonggi-do, Incheon, and overseas university

LG Chem provides equal opportunities to everyone and promotes a diversity of employees so that we contribute social development. As a part of it, We are creating jobs for people with disabilities by operating 'Happy Nuri' and 'Love Nuri', which are the disabled-oriented subsidiaries of the Company. As of 2017, a total of 137 disabled workers are carrying out tasks including beautification, steam washing, management of stalls, cafes and welfare facilities, health keeper, packing, and assistance at animal rooms at the Ochang, Cheongju, Daejeon, Osong and Magok Plants. We will continue to fulfill our social responsibility by organizing the workforce with diversity, such as women, the disabled, and social minorities.

Diversity in Employment (Unit: %, person)

	2015	2016	2017
The ratio of female employment among job creation	12.3	16.9	20.6
Percentage of female employees in management position	4.73	5.58	7.22
Disability Employment	125	137	137
Veterans	303	334	376

* Limited on domestic sites

Employee Grievance Handling Program

LG Chem has a variety of employee grievance resolution programs. The HR Q&A system is operated on the intranet to receive employee grievances by section, and staff in the relevant departments review and respond to the received reports.

Sexual Harassment Reporting Center

The Labor Management Council has provisions for handling grievances in operation regulations. The Grievance Handling Committee, which consists of three or less members representing labor and management, notifies workers of the results within 10 days of receipt.

Also, employees are allowed to submit their grievances through the ombudsman system on the corporate website, which is operated in three languages: Korean, English, and Chinese. In particular, upon the occurrence of sexual harassment, employees can submit a report through the Sexual Harassment Reporting Center. Such reports are handled according to legal procedures based on the investigation of relevant facts in cooperation with the HR related departments as necessary.

Welfare Policy

The Company provides various welfare programs to support the healthy and happy lives of employees, to enhance the level of satisfaction with their work, and to help them maintain a work-life balance. In addition, we operate a retirement pension system to enable employees to have old age income security after retirement. The retirement pension system is operated in two types: defined benefit (DB) and defined contribution (DC) according to legal standards.

Employee Welfare

Area of Supports	List of Supports	Description
Family Support	Housing loan	Loan for employees of one year+ service; company house and dormitory
	Children's school expenses	Supporting tuition fees for children attending middle/high schools and universities
	Family events/emergencies	Supporting expenses and leaves for family events
	Childbirth and maternity Support	A workplace nursery and a feeding room, programs to support family psychological counselling
Health Support	Medical expenses	Medical expenses for employees, spouses, and children
	Health examination	Regular health examination
	Health/psychological consultation	Consultation with specialists such as healthmanagers and psychologists
Leisure Support	Recreation center	3 recreation centers
	Company club	Supporting more than 150 clubs at different workplaces
	Prize for long-term service	Souvenirs and trips in commemoration of long-term service
	Selective welfare	Support self-development, health improvement, use of personal points for the purpose of leisure and E-Shop

Education on Human Rights

At LG Chem, a two-hour training on LG Code of Ethics is provided for employees every year, with a focus on employee rights based on case studies. Also, a one-hour mandatory training on prevention of sexual harassment is provided every year as part of education on human rights throughthe Global Academy, which is an e-learning portal on the intranet.

Maternity and Child-care Leave

LG Chem actively implements support policies to reduce the burden of childbirth and childcare for employees. In addition, the rate of return after parental leave, which is a key indicator of job security for employees using parental leave, is 98.4%, which is a 6.3%p increase from the previous year.

Maternity and Child Care Leave (Unit: person, %)

	2015	2016	2017
Number of maternity leave beneficiaries	90	149	124
Number of child-care leave beneficiaries	75	126	183
No. of employees who have not returned since child-care leave	7	10	3
Ratio of those returning to work	90.7	92.1	98.4
Number of employees working for 12 months or more after a maternity leave	69	88	96
Ratio of employees working for 12 months or more after a maternity leave	89.6	93.6	93.2

Best Practice Programs for Supporting Employees

Employee Counseling Center

LG Chem operates a psychological counseling center at its headquarters and major workplaces and assigns professional counselors to resolve employee grievances. A number of psychological tests, such as character test, personality test, stress test and aptitude test, are provided, and psychological counseling programs for individuals or teams are available to help employees deal with the stress factors that interfere with their work flow. In addition, 'Heart Green Letter' is regularly sent to employees to give information on psychological counseling programs and personal stress and emotion management.

Employee Growth Support

We have introduced and implemented wellness programs to improve employee work engagement through the enhancement of their physical and mental health. For those who get tired or need stress management, we are conducting programs to boost their physical and mental energy in the open-air (Gonjam Resort) for two nights and three days. Also, for executives who suffer from excessive stress from intensive work and organization management, we provide individual counseling by psychiatrists to contribute to continuous performance improvement.

GIVING BACK TO COMMUNITIES

Industry Trends : Change & Response

The era where profit generation and efficiency mattered the most to create economic value has ended. We are now entering an era where a variety of social needs are accepted to create social value. For companies, communication and mutual growth with local communities through social contribution activities are becoming increasingly important.

Since its inauguration, the new government has discussed the legislation on social value. Nowadays, companies are encouraged to prioritize human and community values, such as human rights, labor rights, safety, ecosystem, consideration of the disadvantaged, quality jobs and mutual cooperation, apart from pursuing economic profits and efficiency. In accordance with this trend of legislation, stakeholders are raising their voices for corporate interest in social value and social responsibility. Corporate social responsibility is now an important indicator of corporate competitiveness.

For LG Chem, which operates its business across the globe, local communities are one of the most important stakeholders. Beyond providing token support, we need to build a close relationship with local communities through active engagement. LG Chem strives to share the difficulties and grow together with local communities that serve as the base of our employees and businesses.

Strategy : Risk & Opportunity

Chemical companies build and grow manufacturing facilities in their local communities. Accordingly, neglecting development of and engagement in local communities can result in battered consumer confidence and crisis of existence. The efforts to develop and communicate with local communities will grow the communities and lay the foundation for the solid growth of the company. LG Chem is conducting strategic social contribution activities that reflect the social contribution policies of LG Group and the characteristics of the chemical industry. In particular, we are pursuing social contribution in line with the UN SDGs, and making efforts to create social values through education programs for future generations, support for the environment, and sharing with local communities

CSR Promotion System

To ensure the authenticity of social contribution activities, LG Chem has established its CSR programs in line with the SDGs by reflecting the corporate capabilities and social requirements, and pursued activities that provide substantial benefits to local communities.

CSR Promotion Direction

Being established with the unanimous agreement of 193 UN member states in September 2015, the SDGs are a collection of 17 goals that the UN and the international community must achieve from 2016 to 2030 to realize sustainable development around the world. As a member of the international community and a global corporate citizen, LG Chem intends to contribute to the achievement of the SDGs by aligning its corporate strategies and activities with the goals. We are continuing to discover and implement activities related to the SDGs with a focus on 4 goals in the youth education and green/energy sectors.

CSR Promotion Organization

LG Chem operates a corporate CSR team as a CSR-dedicated organization, and promotes enterprise-wide CSR activities and new business planning. In addition, the business support team at each workplace conducts social contribution activities on its own. The CSR committee with the CEO as the president approves new business and reports about the current status of main social contribution activities.

*Operating income from separate financial statement

Sharing for Social Value

LG Chem, as a Global Corporate Citizen, shares a social value with local communities through social contribution activities reflected by the characteristics of the business.

UN Sustainable Development Goals

LG Chem regards the UN SDGs as a new business opportunity and is actively participating in the implementation of the goals with its technological capability to enhance the value of society and the environment. We reviewed the goal alignment reflecting social contribution activities and corporate code of conduct presented by the SDGs. As a result, we will continuously carry out our social contribution activities in alignment with the SDGs, such as 'Quality Education (Goal 4)', 'Affordable and Clean Energy (Goal 7)', 'Decent Work & Economic Growth (Goal 8)', 'Reduced Inequalities (Goal 10)', and 'Life on Land (Goal 15)'.

Life on Land

Sharing for the Next Generation

LG Chem Chemistry Camp Based on its social contribution policy 'LG that makes young dreams come true', LG Chem promotes social contribution activities that focus on the youth education.

LG Chem Chemistry Camp is representative social contribution program for youth consisting of 3 days camp for middle school students neighboring the company plants. The Chemistry Camp helps students get familiar with chemistry through interesting chemical games and creative experiments and learn the value of living together, vision education and safety education through the 3-day community life. In January 2018, the camp was held over four times, with a total of 400 youth participants under the theme of "Chemistry that Makes Tomorrow". Since its inception in 2005, the camp has attracted more than 6,800 young students through a total of 55 openings.

LG Chem Fun Chemistry Park LG Chem has operated the 'LG Chem Fun Chemistry Park', a chemistry class for elementary schools, in neighborhoods surrounding its plants since 2015. 'LG Chem Fun Chemistry Park' is an experience-based learning program where student participants in four experience booths test and experience various themes such as chemistry, the environment, and energy. In addition, a magic show using chemistry is presented to help students to have interest in chemistry. LG Chem Fun Chemistry Park was held over 8 times in the first/second half of 2017. A total of 1,500 elementary school students from Yeosu, Iksan and 4 other regions (2 times in Naju, 2 times in Seosan, Cheongju, Gwacheon) participated in the program.

In particular, career-interrupted women were hired as instructors for the entire programs, indirectly creating jobs for the underprivileged. In September 2017, we held the Fun Chemistry Park program at the outdoor exhibition hall of Gwacheon National Science Museum in

conjunction with the 'Young Maker Festival' hosted by the LG Yonam Cultural Foundation. We promoted the Fun Chemistry Park to many participants by running various programs at the festival where a number of booths for experience/workshop/exhibition/event were operated.

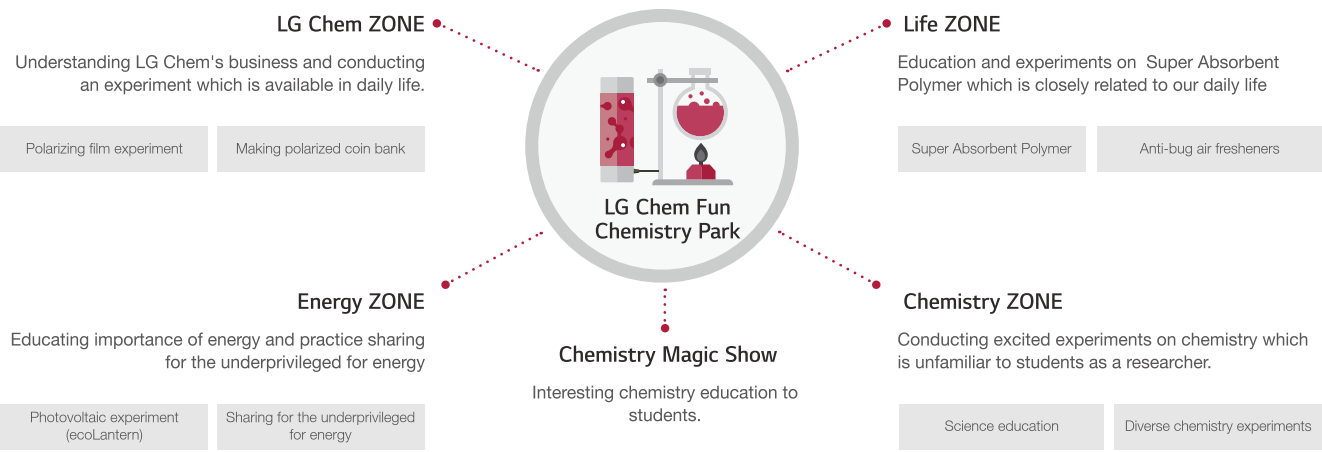

Please tell us why you volunteered

I participated in the camp in 2007, and now even 10 years later, the experience is still a good memory in my mind. I joined the chemistry camp as a volunteer to help students as a major in chemistry. As a mentor, I did my best to create precious memories for my mentees, as I had experienced with my mentor before, and was very happy to see the voluntary participation and creativity of the children. I think it will be good to extend the time for communication between mentees and mentors so that the children can demonstrate their creativity to the fullest.

College student volunteer, Bae Jin-Young

LG Chem Fun Chemistry Park Programs

Sharing for the Earth

Brighter Future, LG Chem's Green World The 'Green Maker', a volunteer group to protect Bamseom Islet located in Yeouido, was launched in connection with the 'International Day for Biological Diversity (22 of May)'. Bamseom was once destroyed by the explosion for the development of Yeouido, but has been self-regenerated with the natural accumulation of sediments in the Han River for a long time. Recognized for its value as an urban habitat for migratory birds, it has been designated as an ecological landscape conservation area in 1999 and a Ramsar wetland in 2012. LG Chem and the Han River Business Division of the Seoul Metropolitan Government planned a series of CSR activities for biodiversity conservation with the official title "Brighter Future, LG Chem's Green World". The activities were held over four times in 2017, with the participation of about 200 employees including the CEO. In the first half of the year, we took out hazard plants, including 'Sicyos angulatus', which threatens the ecological environment with its excessive fertilization. In the second half of the year, we cleaned up the garbage accumulated on the islet during the rainy season. We will plan and implement various CSR activities related to biodiversity in the years to come.

Green Partnership Project LG Chem promotes the 'Green Partnership Project' for local communities where the division and plants are located. In 2017, we signed a MOU with the Community Chest of Korea, Seoul City, and Energy Peace Foundation to promote green partnership projects. The 'Power Plant for Green Hope', which is based on photovoltaic power generation, will be constructed at the public site (Jungnang Sewage Treatment Center) provided by Seoul City by 2018. We plan to sell the power generated by the power plant to KEPCO and provide the proceeds for the children and youth in Seoul City including Seongdong-gu and Dongdaemun-gu. The 'Green Remodeling' project, as a sub-project, will reduce energy costs for summer cooling and winter heating by installing greening systems and insulation materials at the youth welfare facilities and energy-vulnerable facilities. We will expand our project by entering into partnership with other local governments in the coming years.

LG Social Campus LG Chem and LG Electronics are jointly operating the LG Social Campus (formerly LG Social Fund), a platform that supports social-economic integration. Since 2011, we have been supporting the growth of social economic organizations in the green sector by investing annually in this multilateral cooperation model that utilized the expertise of the government ministries, academia, and NGOs for the first time in Korea. From 2011 to now, we have provided financial support (interest-free loans and free grants) for a total of 130 companies (including duplicates). Since 2015, we have also provided spaces for offices and other purposes (for 21 companies) at the industry-university cooperation hall in Korea University. In addition, we make various supports for their business growth, including consulting

on productivity improvement, overseas training in advanced countries, networking workshops, promotion and education. Through these efforts, we are creating an environment for sustainable growth of social economic organizations and pursuing innovation for a better life of the next generation.

What are the environmental and social value that Reum creates through its business?

Reum is a social enterprise founded in 2011, which reduces the negative environmental impact by making products with recycled plastics.Globally, 300 million tons of plastic are produced each year, with only 10% of them being recycled and the remaining 90% being estimated to be discarded and incinerated.Reum utilizes resin, a recycled plastic, to make USB, OTG, and cradles, so consumption is naturally linked to the virtuous cycle of resources. The recycled plastic resin used for the virtuous cycle of waste plastics in 2016 amounts to about 12 tons. With the supports of LG Social Campus, Reum is expanding its business. Direct employment increased by 50%, and indirect employment also increased in the process of assembly, sales and distribution to create 10 senior jobs. Also, we strive to solve domestic and international social problems by preparing parcel and delivery services to create jobs for the youth of Myanmar in 2018.

Dong-Hoon Lee, CEO of Reum

What is the environmental value that Mr. Battery pursues?

Mr. Battery is dealing with a variety of batteries for industrial and power use through on-site battery replacement and O2O platform operation. Batteries are usually made of 'lead' and 'sulfuric acid', and lead causes enormous environmental pollution during processing. Using a battery as long as possible is the way to reduce the environmental impact, but the battery may be replaced for reasons such as discharge despite its remaining life. This early disposal of batteries has reached 20% of the total replacement. Mr. Battery has professional equipment to accurately determine whether or not to replace the battery, thereby reducing costs and battery waste. In addition, reusable waste batteries are recharged and distributed free of charge through the 'Eco-Sharing Campaign'. Mr. Battery received financial support from LG Social Campus. Based on the support, sales in 2017 increased by 120% from the previous year and direct employment increased by 75%.

Han-Sem Park, CEO of Mr. Battery

Sharing for Local Communities (Korea)

1 Company for 1 Army Campaign Since entering sisterhood relationship with the 1st Infantry Division in 2011, LG Chem has provided comfort articles and presents of money every year. LG Chem participated in the 2nd anniversary event of 'Remember 804', which is related to the North Korean provocation of burying PMD series mines in DMZ, held at the Imjingak DMZ Ecotourism Support Center on August 4, 2017. In December 2017, the CEO personally visited the JSA security battalion. He encouraged the personnel who carried out operations on the spot to rescue the North Korean soldiers who defected through the JSA on November 13, and delivered money for support as well as daily necessities and snacks to the 1st Division and the JSA security battalion, respectively.

Genie Day at Local Childcare Centers Program - Yeosu Plant The Yeosu Plant has organized Genie Day every year since 2010 primarily through the support of volunteer clubs to solve difficulties of local childcare centers. It has supported 85 local childcare centers so far. In 2017, personal support goods, and joint support goods such as an air purifier that protects children from fine dust, and home appliance were donated to 14 childcare centers with an aim to protect children.

Dong-go-dongrak Program - Daesan Plant The Daesan Plant has conducted the 'Dong-go-dongrak Program' for high school students

since 2014 to train local talents. Various programs are in place to assist students in planning their academic future such as the project's mentorship providing students with opportunities to explore career choices creatively; the college entrance briefing session helping bridge the information gap between cities and agricultural regions; the chemical analysis experience increasing interest in and understanding of chemistry; and the cultural courses for youth providing various cultural benefits. In particular, the project's mentorship program matches 3~4 students and one employee at the Daesan Plant and contributes to enhancing students' fulfillment and practically helping prepare for the college entrance examination. With awareness as a partner of local communities, the Daesan Plant will operate more diverse and sincere 'win-win programs between a company and a local community' to contribute to local communities.

Junior Science Class – Daejeon R&D Campus Since 2004, the LG Chem Daejeon R&D Campus has operated the 'Junior Science Class' as a way to donate LG Chem's talent to elementary and middle school students. Researchers with professional degrees at the Daejeon R&D Campus visit nearby schools and participate in science classes to provide children with opportunities to learn more about life science. In 2017, the Research Center provides opportunities to have interest and experience in science to students by developing textbooks reflected

Brighter Future, LG Chem's Green World

LG Chem Fun Chemistry Park

LG Social Campus

by the characteristics of LG Chem's products such as ESS, SAP and polarizing plates. An experience study was conducted for more than 400 students from 3 schools and 4 local childcare centers. More than 1,900 students in total have participated since 2004.

Musim Stream Keeper – Ochang Plant The 'Musim Stream Keeper' is a new CSR activity that the Ochang Plant has implemented to preserve the local stream as a representative of the local community. The Ochang Plant will continue to carry out various activities to preserve the ecosystem in urban areas and enhance the convenience of local residents, such as elimination of harmful plants to preserve biodiversity and creation of rest areas for residents, along with the environmental cleanup activity.

Sharing for Local Communities (Overseas)

The Love School Project - LGCCI LGCCI, a Chinese corporation of LG Chem, is engaged in activities to promote youth education and welfare and to clean up the environment in local communities. Since 2010, we have promoted the "Love School Project" for the 8th consecutive year with the China Youth Development Foundation, the China Women's Development Foundation, and the China Environmental Protection Foundation for eight years in a row. Through this project, we are improving the school environment where young students can grow healthily, and building a society in harmony with the development of local communities. By 2017, we have supported a total of 16 schools. Toilets, water purification facilities, and libraries have been improved, and our employees are regularly visiting the schools to conduct volunteer activities.

LGCCI selected Taepyeongjang Elementary School as the 15th beneficiary of 'LG Chem China Love School Project'. In September 2016, we donated a multimedia room which includes a computer room, a library, and a music room. The multimedia room is currently

Love School Project

used as a place for children to use computers and read books. In May 2017, we donated badminton, basketball and soccer equipment and five pianos. In addition, our employees provided chemistry classes according to the children's level of understanding.

College Student Contest on Creativity & Innovation for Automotive Batteries - LGCCI In cooperation with the <China Automobile Newspaper>, LGCCI hosted the "1st Chinese College Student Contest on Innovation and Creativity for Automotive Batteries" in 2017. This contest was designed to discover and cultivate college students who are interested in the application of automotive batteries as well as human resources in the automotive battery and material field. This event serves as a place to exchange expertise among students, professionals and companies, and provides opportunities to utilize the knowledge and skills of students who will lead the development of the future automotive battery industry.

Visiting Korea Program for Youth - LGCTW LG Chem's Taiwan corporation has been operating the Taichung Plant in the central region since 2007. It has selected five high schools near the plant, and supported seven students from the schools to visit Korea every year since 2015. Those selected are sent to LG Chem's Ochang Plant, Daejeon Research Center, LG Twin Tower and LG Science Hall to experience LG Chem's products and to have dreams and hopes through cultural experiences in Seoul. In particular, the operating funds for this activity are managed through a matching fund system in which individual employee contributions would be matched by the same amount from the Company.

1st College Student Contest on Creativity & Innovation for Automotive Batteries

Best Practice Analysis on CSR Program Effectiveness

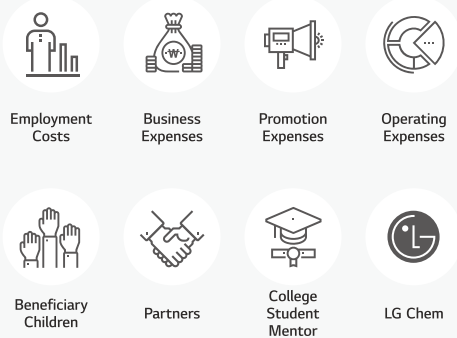

Measurement of CSR Program Effectiveness

LG Chem measure SROI (Social Return on Investment) Which is for promoting the effectiveness of CSR activity, SROI is an improved method to apply the ROI (Return on Investment) concept in social and environmental sectors. LG Chem monetizes input-output of programs and measures the social and economic effects of programs. In 2017, Fun Chemistry Park and Chemistry Camp were evaluated.

SROI (Social Return on Investment) Evaluation*

Program

Effectiveness of Chemistry Camp

We measured the Social Return on Investment (SROI) of the chemistry camp project and quantitatively assessed the effectiveness of the 2018 Chemistry Camp. As a result, the cost-social benefit ratio was 195.7% which is increased by 5.1%p compared to the previous year, implying that the project is making a continuous positive effect.

Effectiveness of Fun Chemistry Park

As a result of evaluating the effectiveness of the Fun Chemistry Park by measuring its SROI, the cost-social benefit ratio was 136.48% in the second half of 2017, thanks to the improvement of the program and the contribution to eliminating educational inequality.

Financial Performance

Diagnosing and Analyzing Business Performance

Business Highlights in 2017

In 2017, LG Chem achieved KRW 25.698 trillion in sales and 2.929 trillion in operating profits. The sales and operating profits grew by 24% and 47%, respectively, compared to the previous year, resulting in the best performance since the foundation of the Company. We merged with LG Life Sciences on January 1, 2017 and officially launched our red bio business, while specifying and implementing the future growth strategies and action plans for the biotechnology business including FarmHannong.

Business Performance by Division

Our Basic Materials & Chemicals Division made outstanding achievements by strengthening its sales capacity, expanding high value-added businesses, and reducing costs. The Energy Solutions Division successfully turned a profit thanks to the increased sales of automotive batteries and ESS,and improved the business structure of small cells. The IT & Electronic Materials Division and Advanced Materials Division also achieved higher sales and profitability with improved products.

Business Prospect in 2018

Going forward, LG Chem will push for the creation of high-added value in its existing businesses and actively enter into new material businesses. At the same time, we will intensively promote the future growth areas of energy, water and biotechnology, and grow into a world-class company that provides differentiated materials and solutions.

Operating Income (Unit: KRW million)

Financial Status

As of the end of 2017, LG Chem's total assets are KRW 25.412 trillion, up KRW 4.554 trillion from the previous year, thanks to the

overall expansion of sales in all business divisions as well as the increase in accounts receivable, cash flows from operating activities, and tangible and intangible assets from the merger with LG Life Sciences. Liabilities also increased by 35.2% from the previous year to reach KRW 8.703 trillion, due to the impact of the merger and the issuance of corporate bonds. The total amount of capital also grew by 16.3% to record KRW 16.339 trillion.

Tax Policy

LG Chem is aware that compliance with tax laws and tax risk management including the maximizing of shareholder value are important factors to contribute to the national finance. LG Chem has established and henceforth operated strict principles and regulations related to taxes. For the international transaction with overseas corporations, the company has implemented the reasonable transfer price policy suitable for the OECD guidelines on transfer prices and domestic tax laws. LG Chem has local corporations and branch offices in China, the USA, Poland, India, etc. The company fulfills its duty to submit the various documents required by the relevant countries 'tax authorities and its duty to pay tax including the corporation tax according to the relevant countries' tax laws. Detailed information regarding taxes is notified publicly. Also, LG Chem is taking a variety of measures to respond to the pending anti-dumping lawsuits, while conducting a number of preliminary risk management activities.

*Activities related to anti-dumping duty: Risk management activities are being conducted by monitoring products subject to anti-dumping lawsuit, responding to anti-dumping lawsuits and conducting due diligence regarding the field cases

Recruitment and Retirement

Thanks to its outstanding economic performance, LG Chem created many jobs through active new recruitments in 2017. The Company had 6,048 new hires in 2017, which is a 55.4% increase from the previous year. The number of manager employed from the local community of business sites is 586 and the ratio is 67%.

New Recruitment (Unit: person)

		2015	2016	2017
Korea	Male	973	1315	914
	Female	137	267	237
	Total	1,110	1,582	1,151
Overseas	Male	2,835	1,576	3,597
	Female	1,418	733	1,300
	Total	4,253	2,309	4,897

*Overseas data for the number of new employment is limited to China (LGCCI) and overseas manufacturing facilities.

* Voluntary retirement: Excluding involuntary cases such as disciplinary dismissal, retirement, etc.

Employee Training

LG Chem provides its employees with training sessions that advance their job skills and also opportunities for their self-development. In 2017, the average training time per employee was 44 hours and training cost per person was KRW 1.09 million. The year-on-year decline was due to a reduction in actual training hours thanks to the application of various training methods.

Training for Employees (Unit: hour; KRW 10 thousand, KRW billion)				
	2015	2016	2017	
Average training hour	41.3	50.2	43.7	
Average training cost	100	112	109	
Total training hour	590,698	751,467	738,634	
Total training cost	14.2	16.8	18.4	

* Data is limited to workplaces in Korea

Strengthening Job Competency by Occupational Group

In addition to its leadership training program, LG Chem also runs training sessions on sales/marketing, purchase, and quality at the LG Chem Academy to strengthen the competencies requiredfor each occupational group. LG Chem has continued to improve each program every year in order to provide the most adequate training for its employees and to enhance training effectiveness. From 2017, we applied the Flipped Learning technique to occupational group training courses. This is a technique that requires employees to do more than simply completing a course and to discuss on-site tasks through preparations and collective training, which helps them strengthen the competency in business practices. In 2017, a total of 685 employees participated in occupational group trainingand all courses received 4.5 or higher satisfaction points out of 5.

Nurturing On-site Experts

LG Chem provides a systematic know-how delivery program and training for on-site talents that meet certain qualifications. For individuals, this is an opportunity to become an expert, and for the organization, it is a way to raise competitiveness in production. Unlike the past, we no longer confine the operation of the on-site expert development program to large business sites, but have extended it to small to mid-sized business sites since 2017, which resulted in an increase in the number of training participants from 217 to 381 year on year.

Nurturing Global Talent

To expand its overseas businesses, LG Chemis striving to nurture global talents by enhancing the capabilities of expatriate employees and local employees in overseas markets. Training programs for expatriate employees are operated systematically from pre-training before their dispatch to post-training after their return. Furthermore, LG Chem provides on-site training courses for expatriate employees to support their local adaptation and capability enhancement.

In 2017, we clarified the roles of LG Academy, thegroup's training institute,and LG Chem's corporate and business divisions, allowing a more systematic training of expatriate employees. In addition, we run local expert courses for different overseas regions to foster expatriate candidates for theirfuture positions in strategic areas. This program has been operated since 1995 to cultivate experts for various regions of the world through domestic and overseas training courses. Moreover, LG Chem is focusing on nurturing experts not only in China but also Central and South America, Middle East, India, etc. which are strategic regions for future.

Evaluation on Performance and Reward

Through a fair performance evaluation system, LG Chem is raising the level of employee satisfaction and motivating them to perform better. The performance evaluation system reflects individual ability, teamwork, and changes in the environment both inside and outside the company through the evaluation of achievements, work difficulty, and contribution, as well as attainment of business goals. In addition, we are evaluating individual job performance by job grade and family, and also attitudes that represent the LG Way. In 2017, all employees subject to performance evaluation were evaluated. All employees are given equal opportunities and same basic salaries regardless of gender.

Equal Salary (Unit: %)				
	2015	2016	2017	
Management position	1.12	1.13	1.10	
Non-management position	1.11	1.16	1.11	

* The data is ratio of average male salary compared to that of female

Employee Safety and Health

We are committed to providing a safe and healthy working environment to our employees. In particular, we are strengthening education on safety environment to spread the culture of safety throughout all business sites at home and abroad. The rate of industrial accidents in 2017 is 0.23% in Korea and 0.28% overseas.

Injury and Severity Rate (Unit: %, day)					
			2015	2016	2017
Employee	Injury rate	Korea	0.20	0.19	0.23
		Overseas	0.21	0.13	0.28

Environment

Raw Materials Management

LG Chem's products use naphtha produced from crude oil and minerals as raw materials. As these raw materials are limited resources, we strive to produce as many products as possible with the same amount of materials. In 2017, the domestic consumption of raw materials has increased by 13.7% year on year to reach 1.16 tons/product tons. In addition, we have used 20,526 ton of regenerated raw materials at domestic worksites.

Raw Materials (Unit: ton, ton/product ton)				
		2015	2016	2017
Korea	Total amount raw material use	15,185,371	16,894,226	19,672,312
	Intensity	1.01	1.02	1.16
	Total amount of recycled raw materials	22,666	22,984	20,526
Overseas	Total amount raw material use	2,637,702	2,260,488	2,497,083
	Intensity	1.24	1.10	1.10

Wastewater and Waste Management

In 2017, the total amount of waste water was 15,045,938m³ in domestic worksites, and the recycling ratio was 7.4% (1,194,080m³), LG Chem strives to increase the rate of waste recycling and decrease theintensity of waste discharge to deal with the continued waste generation. In 2017, the domestic waste discharge was

221,698 tons which is increased by 5% from the previous year, and recycling rate was 71.7%.

Wastewater Management (Unit: m³, m³/product ton, %)					
		2015	2016	2017	
Korea	Amount of wastewater discharged	13,383,269	14,956,833	15,045,938

Water Resource Management

LG Chem has responded to water resource risks by systematically managing water resources to ensure stability of supply. It also takes into consideration the influence of discharged water on adjacent eco systems and water-intake areas. In 2015, The total amount of LG Chem water use amounts to 57,196,025m³ in domestic worksites.

Water Usage by Source (Unit: m³, m³/product ton)				
		2015	2016	2017
Korea	Ground water	427,008	427,020	396,376
	Industrial water	51,934,077	54,146,262	55,349,317

	Intensity	3.8	4.2	4.4
	Ground water			

* Data changed in 2015, 2016 reflecting the correction of the amount of water usage by source of Cheongju Plant
* LGCBH data in 2015 and 2016 has been changed
* Data for water usage by source is limited to China (LGCCl) and overseas manufacturing facilities

Pollutants Management

LG Chem strives to minimize the release of pollutants. Eco-friendly facilities have been introduced to reduce the amount of air and water pollutants generated during the manufacturing process. We are also making various efforts to minimize impact on water quality, such as developing wastewater concentration technology for each business site, improving existing wastewater treatment systems, and strengthening the management of water pollutants. Also, efforts are being put forth into reducing emissions by installing supplementary boiler burner facilities, and improving existing related systems.

Discharge of Water Pollutants (Unit: ton, kg/product ton)							
		2015		2016		2017	
		Amount	Intensity	Amount	Intensity	Amount	Intensity
Korea	COD	689	0.046	679	0.041	755	0.045
	T-N	243	0.016	276	0.017	284	0.017
Overseas	COD	390	0.183	385	0.187	387	0.170

*Overseas data of 2015 and 2016 of LGCGZ COD amount has been changed
*Overseas data for discharge of water pollutants is limited to China(LGCCl) and overseas manufacturing facilities

Emission of Air Pollutants (Unit: ton, kg/product ton)							
		2015		2016		2017	
		Amount	Intensity	Amount	Intensity	Amount	Intensity
Korea	Dust	141	0.009	152	0.009	143	0.008

*Amount of emission of air pollutants for 2016 has been changed
*Overseas data for Emission of Air Pollutants is limited to China(LGCCl) and overseas manufacturing facilities

Hazardous Waste Management

LG Chem actively responds to domestic and international regulations on chemical substances and prohibits the use of hazardous chemical substances. Through its material element analysis system and IT system, LG Chem thoroughly manages hazardous chemical contents to decrease the total amount of hazardous chemicals found at worksites and to improve product stability and eco-friendliness.

Total Use of Toxic Substances (Unit: ton, ton/product ton)				
		2015	2016	2017
Korea	Amount	5,623,781	6,651,512	6314478

* Data for environmental investment is limited to China (LGCCl) and overseas manufacturing facilities

Business Performance and Strategy by Division

Basic Materials & Chemicals

Business Overview

LG Chem's Basic Materials & Chemicals business has the characteristics of a large-scale process industry, as it includes both the production of basic materials, such as ethylene, propylene, butadiene and benzene, with the use of naphtha as a raw material, and the production of various synthetic resins made from these basic materials. We are contributing to the development of the industry through various petrochemical products of high quality. Our key products include PE, PVC, plasticizer, ABS, EP, Acrylic, SAP, synthetic rubber, and special resin.

Market Prospects

The recent growth in global petrochemical industry is forecast to continue until 2022. This is because tight supplies are expected as the expansion of global production, other than those in North America, fell short of expectations due to the volatility of oil prices, while demand has increased in line with the global economic recovery.

In the long-term perspective, demand for highly functional/new materials is expected to grow, along with the enhancement in the structure of consumption/industry. Global companies are therefore diversifying their business portfolio with a focus on highly functional products while pursuing stronger business competitiveness through a proactive response to new demands.

Oversupply of Basic Petrochemicals/Average Profitability

* Source : IHS (2018 WPC)

Business Strategy

The Basic Materials & ChemicalsDivision is building a future business structure by promoting high value-added businesses and launching into new promising materials, which will lead to the growth with profits. As part of these efforts, we are pursuing the expansion of elastomers and SAP, and converting the existing ABS and rubber production lines to high-value added ones. We are also expanding our overseas EPC business to Southeast Asia and India to strengthen the local response tothe markets and customers. Moreover, to internalize core raw materials for the growth of high-value added businesses, we are continuously pursuing the expansion of ethylene production. In addition, we began to expand the production of acrylic acid and invest in basic petrochemicals that apply independent new process technologies. To prepare for the future, we will foster new and promising materials, such as adhesives and carbon/lightweight materials, to accelerate their commercialization, and continuously strengthen the R&D capacity by establishing an R&D center specialized in our key generic technologies: catalysts and processes.

Energy Solutions

Business Overview

Since becoming the first mass producer of lithium-ion batteries in Korea, LG Chem has been leading the global market for automotive batteries, ESS (Energy Storage System) batteries, and small cells based on its world leading technology. Automotive batteries are medium to large-sized lithium-ion batteries used as the driving force of electric vehicles. They also refer to rechargeable batteries that can be repeatedly charged and discharged as lithium-ions move from the cathode to the anode and stores and releases electricity. ESS batteries are a device that stores energy to increase energy efficiency, improve quality of renewable energy, and stabilize the power supply system. Small cells come in three types: cylindrical, prismatic, and pouch, which are applied to mobile devices, power tools, and power driven devices.

Market Prospects

The production of electric vehicles has been increasing due to the strengthened environmental regulations worldwide, which is consequently raising the demand for automotive batteries. Governments are strengthening their policy support for ESS throughout the world, and the ESS market for electric grids and homes is also growing at an accelerated pace due to the improved efficiency of the ESS battery system. The small cell market is expected to expand into new areas, thanks to the growth of cylindrical batteries used in power tools, electric bikes, vacuum cleaners, laptops, etc. and the increased application of small cells in wireless products.

Prospect of the Lithium Rechargeable Battery Market by Main Field (Unit: GWh)

*Source: B3 report, January 2018

Business Strategy

LG Chem aims to achieve the global top position in the battery market and to effectively respond to the change of business environments based on differentiated products, strengthening technology capability and price innovation. Our business strategies for automotive batteries are as follows: to win orders for large electric vehicle projects through differentiated products based on material innovation, to ensure competitive prices to compete with internal combustion engine vehicles, and to strengthen production, quality, procurement, and marketing divisions in preparation for rapid business expansions. As for ESS batteries, we are creating a barrier to entry with a longer battery life and differentiated customer services, strengthening the business portfolio with a focus on core markets, securing the top position in the electric grid and home market, and raising price competitiveness by maximizingdevelopment and production efficiency. The business strategies for small cells areas follows: for pouch batteries, to enhance profitability by improving premium products in the IT market, and for cylindrical batteries,to respond to the extended application in wireless products (power tools, vacuum cleaners) and power-driven devices (electric bikes, electric scooters) and to find new growth opportunities, such as drones, AR/VR and robots.

Information Technology & Electronic Materials

Business Overview

LG Chem's IT&E Materials Division both produces and sells various IT materials used in displays, semiconductors, and automotives, as well as water treatment materials that will serve as the growth engine for the next generation. Polarizer, one of the core businesses in the division and the first commercialized material in Korea, is a core material for LCD, for which LG Chem holds the world's top competitiveness. Furthermore, the Company is continuing its growth by producing RO membranes, which are the key to water treatment, manufacturing functional films, and developing materials that can be applied to OLED displays for smartphones and TVs and plastic OLEDs.

Market Prospects

The growth of the LCD market is expected to continue in China where large-scale investments, such as 10.5-generation production lines, are being made. The growth of the OLED market is mainly led by technology-leading companies. The demand for functional films is expanding according to market and technology changes. In addition, along with the increasing interest in water resources, the global water market is expected to grow steadily and reach USD 800 billion in 2019.

Size and Prospect of the Global Water Industry Market (Unit : billion USD)

* Source: GWI (Global Water Intelligence)

Business Strategy

For polarizers, we have invested in a local production base in China, the largest growth market for the material, ahead of our competitors, and are currently operating four production lines. We plan to enhance profitability through raw material internalization and productivity improvement. For functional films, we will strengthen our product and customer base by establishing development, production, and quality systems fit for small quantity batch production. For RO filters, we will become the top manufacturer in the industry with the goal to make it our No. 1 global business based on product competitiveness. Functional films and RO filters are especially nurtured by our headquarters, with the input of resources to promote the expansion of the businesses. Also, we will continue activities to improve the productivity and quality of glass substrates.

Advanced Materials

Business Overview

The Advanced Materials Division has been promoting future material businesses in order to secure growth engines. Its main business is the production and sales of materials for displays and batteries. One of the display materials is LCD photoresist, which is a core material for LCD color filters. The LCD photoresist was developed by using LG Chem's independent technology, followed by a successful mass production for the first time in Korea. In addition, the OLED panel for smartphones, which was adopted by Apple for the first time in the world, also uses LG Chem's materials. The Division continues to grow steadily by creating new customers and building synergy with other divisions in LG Chem and affiliates in the LG Group.

Market Prospects

With the establishment of large TV plants by the Chinese display manufacturers, the LCD materials market is growing mainly in China and this trend is expected to continue for years to come. Demand for OLED materials is projected to increase significantly due to the investment in new lines by domestic display companies and the expansion of OLED production facilities by the Chinese display makers. Regarding cathode materials, the electric vehicle market will be facilitated further, increasing demand for high-capacity cathode materials that can extend battery life. As the price of cobalt, its core material, is expected to go up due to the instability of supply and demand, active technological developments will be made to reduce the cost of cathode materials.

Size of the Display Market (Unit: million m²)

* Source: IHS (2018. 4)

Business Strategy

LG Display, one of the major clients of the LCD Materials Division, has increased the number of products applying LG Chem's high-color and high-intensity materials, and is striving to enter the fast-growing Chinese market. The OLED Materials Division is making efforts to increase the number of materials applicable to the products of its clients, such as increasing the number of products applying light-emitting materials for LG Display's OLED TV in 2017. Moreover, as the demand for cathode materials used in electric vehicles is expected to grow, we are expanding plants at home and making investments in new overseas plants in the form of joint ventures. In addition, we are investing in the shares of core material suppliers and facilitating joint ventures to secure a stable supply of metal and cobalt, which are the core materials of cathode materials.

FarmHannong

Business Overview

LG Chem officially launched its red bio business by merging with LG Life Sciences in January 2017. LG Chem's Life Sciences Division was the first in Korea to receive the US FDA approval for a new drug in 2003, and is now strengthening its competitiveness in the future biotechnology industry based on its outstanding technologies that led to a successful commercialization of new drugs. We are also utilizing our advanced technology, R&D capacity and production facilities to continuously increase the competitive edge in the pharmaceutical, vaccination, and fine chemical markets.

Market Prospects

The global prescription drug market (excluding over-the-counter drugs and medical devices) is projected to expand from approximately USD 774 billion in 2017 to USD 1.1 trillion in 2022, maintaining a steady growth of 6.5% every year. This can be attributed to the increasing development of new drugs due to aging population and innovations in life science technology. In particular, the anti-cancer and immune disorder markets are expected to lead the growth with active releases of new drugs. The market for metabolic disorders, including diabetes, will also continue its growth. The time and cost for developing new drugs are constantly increasing, making the activities to raise R&D efficiency the core competitiveness of the red bio business.

Evaluate Pharma Market Prospects data (Prescription Drug, unit: Billion USD)

* Source: Evaluate Pharma (2017. 5)

Business Strategy

The Life Sciences Division has concentrated its R&D activities on anti-cancer, immune disorders, diabetes, and metabolic disorders for the development of new and innovative drugs. As a strategy to strengthen our R&D capacity and efficiency, we will promote open innovation in all areas, including building capacity at a global level and securing a global network, to actively expand the pipeline of new drugs. In the long run, we will develop innovative drugs that have global competitiveness, and grow into an innovative global bio-pharmaceutical company with innovative new drugs by 2030 and become the next generation growth engine for LG Chem.

Business Overview

LG Chem has diversified its business by entering the green bio industry with the acquisition of the nation's top green bio company, Dongbu FarmHannong, in 2016 and newly launched it under the name of 'FarmHannong'. FarmHannong is mainly engaged in the manufacturing and sales of agricultural products including crop protectants, seeds, and fertilizers. In 1953, FarmHannong started the first crop protectant business in Korea and is still maintaining its leading position with the largest market share in the country. Now it is focused on developing and selling high value-added and differentiated products. The seed business secures a variety of genetic resources that can raise competitiveness in the future food industry and continues to develop new high-value added varieties. The fertilizer business focuses on the development and sales of special functional fertilizers that will lead the future fertilizer industry.

Market Prospects

Recently, environmental and food issues, such as ecosystem conservation, population growth and food safety, have become increasingly important, and green biotechnology is attracting much attention as the sole solution to these issues. As a result, the green bio market is expected to grow steadily across the globe. Global chemical companies have already entered the green bio market, and are actively pursuing mergers and acquisitions to respond to market growth and enhance competitiveness. At the same time, we are increasing investments to secure future technologies, such as genetic engineering technology and solutions for precision agriculture, and these movements are expected to accelerate the growth of the green bio market.

World Population Growth

* Source: UN, World Population Prospects: 2017 revision

Sales

Business Strategy

Farmhannong has been maintaining its leading position in the domestic market for crop protectants, fertilizers, and seeds, and achieved KRW 603.9 billion in sales and KRW 35.5 billion in operating profits in 2017. Farmhannong established its first overseas research station in 2018, and is working to expand its business to the global market. We will continue to focus on overseas markets to grow into a global green bio company with the annual sales of KRW 1 trillion by 2022.

Corporate Governance

Composition and Independence of Board of Directors

LG Chem's Board of Directors consists of two executive directors, one non-executive director, and four independent directors. For effective checks and balances against the management, more than half of the BOD consist of independent directors. The directors are appointed to serve a three-year term in principle and then are re-appointed in consideration of their activities and performance evaluations. Moreover, according to the Commercial Act, a director can only serve one other executive position in another company that does not have a stake in LG Chem.

Expertise and Diversity

The four independent directors have expertise in finance, tax, law, administration, and chemical substances, or expertise in chemistry which is LG Chem's core businesses and possess a strong understanding of management and chemistry, batteries, IT & electronics, and life sciences. To enhance the expertise and efficiency of the Board of Directors, LG Chem also operates three committees under the Board of Directors, which are the Audit Committee, the Nomination Committee for Independent Directors, and the Management Committee.

Audit Committee The Audit Committee conducts audits on accounting, business practices, and directors' execution of duties, and has the authority to request a sales report from a director or investigate the business or property of the Company. All the members of Board of Directors are independent directors for independence.

Nomination Committee for Independent Directors The Nomination Committee for Independent Directors makes recommendations for candidates who meet the interests of LG Chem and its stakeholders, including shareholders, with strong expertise and capabilities, and appoints them at the general meeting of shareholders. To secure the diversity of independent directors, LG Chem does not discriminate against gender, nationality or race. In order to ensure fairness in selecting candidates for outside directors, two of the three members are outside directors.

Management Committee The Management Committee was established in July 2017 to handle daily business matters delegated by the BOD and financial matters under a certain amount.

Board of Directors Activity

LG Chem holds one regular meeting of the Board of Directors every quarter, and also temporary board meetings as necessary. In 2017, the Board held 11 meetings resulting in 37 approvals and 8 reports. The members of the Board of Directors must attend the meeting 100% unless there is an unavoidable reason. The participation rate was 100% for executive directors and 93.1% for independent directors in 2017.

LG Chem's Board of Directors

Category	Name	Role	Experience
Executive Directors	Park, Jin-Soo	Chairperson of the Board of Directors Chairperson of Management Committee	Current CEO and Vice Chairman of LG Chem * Concurrent post: CEO of Farm-Hannong Former CEO of Hyundai Petrochemical, Former CEO of LG Petrochemical
	Jeong, Ho-Young	Member of the Management Committee	Current CFO of LG Chem * Concurrent post: Auditor of LG Academy Former CFO of LG Display, CFO of LG Household & Health Care
Non-Executive Director	Koo, Bon-Joon	Chairperson of the Nomination Committee for Independent Directors	Current Vice Chairman of LG Corp. Former CEO of LG International, CEO of LG Electronics
Independent Directors	Ahn, Young-Ho	Chairperson of the Audit Committee Member of the Nomination Committee for Independent Directors	Current Adviser at Kim & Chang Former Director General for Planning and Coordination of Fair Trade Commission, Standing Commissioner of Fair Trade Commission
	Char, Kook-Heon	Member of the Nomination Committee for Independent Directors	Current Professor at the School of Chemical and Biological Engineering, Seoul National University, Permanent Vice President of The National Academy of Engineering of Korea, Senior Vice President of The Polymer Society of Korea

* As of June 2018

Board of Directors Activity

		unit	2015	2016	2017
Attendance	Executive Directors, Non-Executive Director	%	82.5	100	100
	Independent Directors (Non-Executive)	%	95.8	100	93.1
Number of meetings		Time	10	10	11
Number of agenda submitted	Approval	Case	32	38	37
	Report	Case	13	9	8

Evaluation and Compensation

Independent evaluations on the activity and performance of directors are conducted at the end of each term on a regular basis, and the results are reflected in the decision of re-appointment.

Directors receive compensation within the limit approved at the general meeting of shareholders. Wages for executive directors are calculated in consideration of their work performance, and incentives are provided according to the comprehensive evaluation of quantitative indicators, such as sales, and qualitative indicators, such as evaluation of key projects and implementation of mid to long-term expectations. The same wages are paid to all independent directors within the compensation limit approved at the general meeting of shareholders. The upper limit of wages of the Board of Directors decided by the general shareholders meeting in 2017 is KRW 8 billion, and the total amount of wages paid was KRW 3.38 billion. Wages for individual directors and auditors that exceed KRW 500 million are made public through a business report in accordance with related law.

Compensation for Directors in 2017 (Unit: KRW million)

	Number of People	Total Payment	Average Compensation Per Person
Registered Directors (Independent Directors and Audit Committee members excluded)	3	3,144	1,048
Independent Directors (Audit Committee members excluded)	1	-	-
Audit Committee members	4	241	60

Transparent Disclosure

Important decisions on management resolved by the BOD shall be immediately made public to provide related information to shareholders and stakeholders. Major business issues related to investors' interests are disclosed through the Data Analysis, Retrieval and Transfer System (DART) of the Financial Supervisory Service and the Korea Exchange (KRX) and LG Chem website.

CSR Governance

In order to strengthen the CSR promotion system throughout the company, LG Chem operates the CSR Committee composed of executives from relevant departments with the CEO as a chairman. In 2017, the executives in charge of Communications and Procurement at Life Sciences Division and Advanced Materials Business Unit were added, making a total of 12 executives as members of the Committee.

As the highest decision-making body dealing with CSR-related issues, the CSR-related Committee identifies tasks for improvement in each area through the CSR Team Leader Council. The Committee reports on the implementation of the proposed tasks and makes decisions on key issues to be pursued in the future.

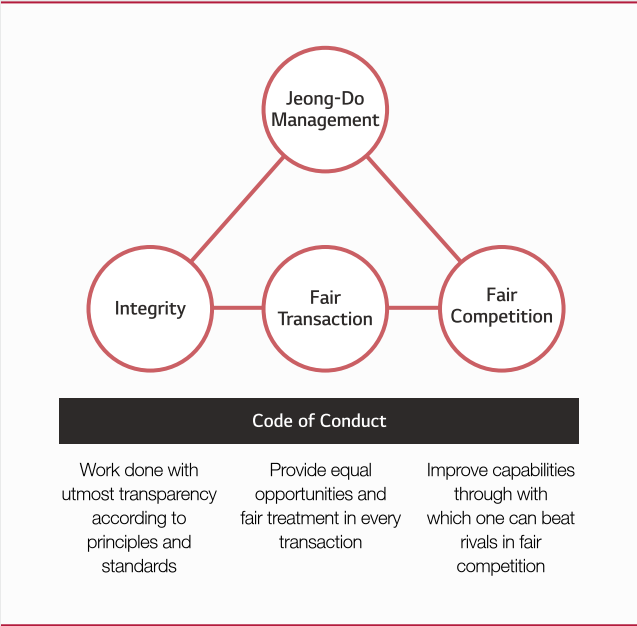

CSR Task to Promote in 2018

Category	Tasks for CSR Risk Management
Supplier CSR	· Evaluation on supplier procurement · CSR meeting with the evaluated suppliers
HR	· Sharing and education on Global Human Rights & Labor Policy, managing risks related to working hour
Safety and Environment	· Activating local consultative groups, developing the company-wide management index
Jeong-Do Management	· Strengthening the evaluation system of corruption risk
CSR	· Establishing and applying the Code of contribution · Operating the Power Plant for Green Hope and Planning for new CSR activities

Business Ethics

Jeong-Do Management Principles

'Jeong-Do Management' is LG's own way of behavior that plays fair by continuously developing ability based on ethics management. 'Jeong-Do Management' does not simply indicate ethical management; it means to take a step forward from ethical management to make substantial achievements with the capability to win competitions.

LG Code of Ethics

The LG Code of Ethics provides all LG Group employees with the standards for appropriate behavior and value judgment that serve as the foundation for all business conducts of LG Chem employees and business sites at home and abroad. The LG Code of Ethics consists of customer responsibilities and obligations, fair competition, fair trade, basic ethics of employees, employee responsibilities, and national and social responsibilities.

Practice Jeong-Do Management in Life

LG Chem provides regular training on Jeong-Do Management for all employees and partners, pursuant to the Jeong-Do Management training and promotion system. In particular, we send 'Jeong-Do Management letters' tailored to each business and constantly emphasize that 'fair competition through capacity building' is the core of Jeong-Do Management. We also promote 'Jeong-Do Management practices in daily life' that encourage business sites to autonomously eliminate poor business practices, identify risks and improve processes, through programs such as 'Outreach Activities for Consensus Building,' and 'Workshop for On-site Issue Management'.

Reporting System

LG Chem runs the 'Corruption Reporting Systems' to prevent unfair transactions and rapidly address the violation of Jeong-Do Management such as employees' corruption and accepting bribes. Internal employees and external stakeholders can report violations anonymously and by a real name on the LG Jeong-Do Management homepage. In the case of reporting by a real name, LG Chem strictly protects the confidentiality of an informant and the contents of reports to prevent causing disadvantages to the informant. In case of verifying the company's loss reduction or contribution to Jeong-Do Management, LG Chem runs the 'Compensation System for Corruption Report' to compensate an informant. Besides, LG Chem runs the win-win bulletin board with suppliers to solve their difficulties.

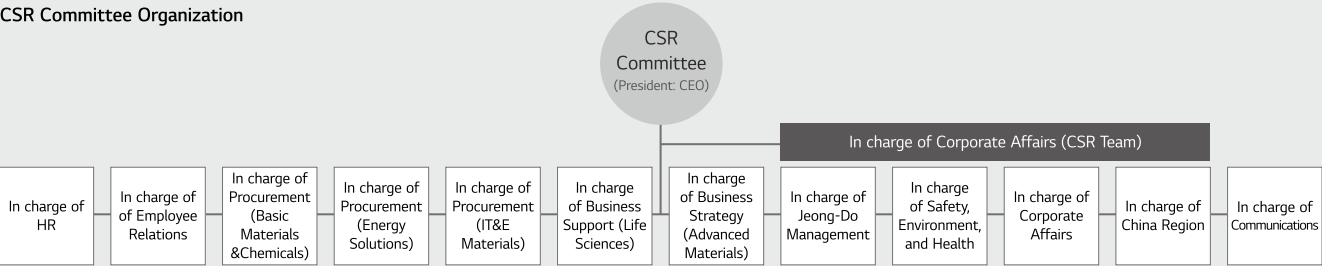

Respond to Corruption

Category	Unit	2015	2016	2017
Inspection by the Ethics Office	Case	17	10	19
Persons punished	Person	18	5	10
Discharged persons due to corruption	Person	20	3	16

Compliance Management System

LG Chem has established the compliance management standard to promote fair and transparent business practices, ensure the sound development of the Company, and gain customer trust by complying with laws and regulations. In line with this, we also operate the compliance management system to identify laws and regulations that must be complied with during business operations and self-check the compliance of our employees, so as to prevent legal violations and respond to various legal risks.

CSR Committee Organization

LG Chem's legal compliance support and management activities are the responsibilities of the compliance officer appointed by the Board of Directors, and the effectiveness of the compliance support and inspection system is evaluated every year and the results are reported to the BOD.

In addition, to support activities of the compliance officer, the company operates the Compliance Support Team under a person in charge of legal affairs and performs compliance support activities through cooperation with related departments.

Compliance Inspection and Risk Prevention Activities

LG Chem constantly checks and analyzes new legislations and amendments made in domestic and foreign laws and regulations as well as legal trends. We review the scale and frequency of legal risks to identify risk probability, which is used for risk categorization. To ensure the effectiveness of the compliance management system, we conduct regular and irregular compliance checks, and when legal risks are identified through the compliance checks, they are notified to the relevant department managers so that proper measures, such as suspension, improvement, correction or sanction, can be taken. Moreover, to prevent the recurrence of the same or similar violations, we have established a recurrence prevention plan. When tasks closely related to legal risks need to be performed, they must be consulted with the legal department in advance and the results must be reported to the compliance officer.

Compliance Training

LG Chem develops and operates a variety of compliance training programs tailored to job grades and duties, and provides an online compliance training session once every year for all employees. In 2017, a series of compliance training programs were operated on cartel, internal transaction, and subcontracting transaction, and a fair trade training session was organized for employees in the Life Sciences Division. In 2017, the online compliance training was conducted under the theme of "the Importance of Compliance," providing information on the necessity of compliance, increased regulatory risks, increased possibility of noncompliance detection, and relevant requests.

Self-Compliance Program for Fair Trade

LG Chem has introduced the four business practices recommended by the Korea Fair Trade Commission (KFTC) to promote fair subcontract transactions among large, mid and small-sized entities and build a foundation for mutual cooperation.

We have operated the Compliance Program with a focus on preventive measures. In 2017, we performed inspections on cartel, internal transaction, subcontracting transaction, and agency transaction while conducting an inspection and compliance training for the newly added businesses. We have also established a 'Fair Competition Guideline' and formed a self-compliance team at the working-level under the control of the fair trade and self-compliance manager to build, implement and report the operation plan of the Compliance Program.

Operating Fair Trade System

LG Chem pursues fair contracts based on the standard subcontract agreement recommended by the KFTC, with the immediate reflection of amendments in the Fair Trade Act, Subcontracting Act, and Agency Transactions Act.

We also operate the Internal Committee on Subcontracting Transactions that carry out preliminary inspections to prevent unfair transactions that may occur in subcontracting transactions with small to mid-sized suppliers.

The Committee, consisting of three members including an executive related to subcontracts, conducts a review on transactions that exceed a standard annual amount, focusing on whether or not to conclude a contract and the adequacy of the transaction amount. Furthermore, the Dispute Resolution Group classifies the cases of dispute into grades based on the level of response, and takes measures for follow-up and recurrence prevention.

Spreading Fair Trade Culture

In order to establish a fair trade culture throughout the Company, LG Chem provides customized training programs every year, including Q&A training, new team leader training, and leader W/S training, that reflect the characteristics of each business. In addition, we distribute the Fair Trade Compliance Manual that reflects new legislations, legal amendments and practical issues, and also the Do's & Don'ts as well as Compliance Newsletters to provide all employees with behavior standards for self-compliance. All employees also make the 'Fair Trade Compliance Pledge' every year to show their commitment to observe the Fair Trade Act and Subcontracting Act.

Information Security Management System

LG Chem has established a systematic information security management system to protect all of its business secrets, core technologies, R&D information, customer information, and personal information. Also, we operate the security control system around

the clock for real-time response to external hacking attacks, and perform regular inspections on security vulnerabilities as well as hacking simulations to constantly improve the level of internal security.

To prevent information leakage, we have strengthened the pre-identification of abnormalities through a detailed analysis of leakage channels, along with security measures for all IT media, including PCs and emails. Furthermore, our main business sites, including the Technology Research Institute in Daejeon and the Ochang Plant, have maintained global security levels by obtaining the ISO 27001 certification, which is the international standard for information security.

Improving Security Awareness

LG Chem provides online and offline training on information security for all domestic employees once a year to continuously raise the level of their security awareness. We are also extending the security training to overseas business sites, including China, and the employees of our partners are also required to meet essential security requirements, as part of the efforts to create a culture where all personnel working for LG Chem perform their duties with a proper awareness of security.

Responding to Information Protection Regulations

LG Chem is responding to external regulations on domestic and overseas information protection, which have been strengthened in recent years. With regard to the Personal Information Protection Act of Korea, we have taken protection measures for personal information that we collected prior to the enforcement of the Act, and also necessary measures for each amendment. In addition, we have established a personal information management system for all of our European corporations prior to the enforcement of the European General Data Protection Regulation (GDPR). We are also continuously identifying and improving legal imperfections in regard to the China's Network Safety Act, which was enacted in 2017.

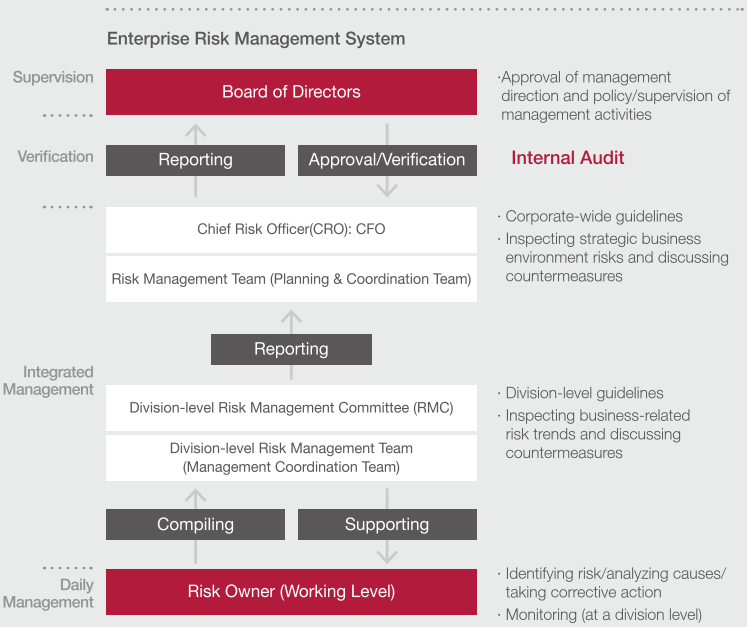

Risk Management

Company-wide Risk Management System

For efficient risk management, the company-wide risk management system was structured in three stages: daily management at the working level, integrated management by risk management team, and supervision by the BOD. Daily management includes monitoring of each business division, risk identification and cause analysis. For integrated management, the Risk Management Committee (RMC) reviews risks according to the characteristics of each division, establishes response measures and manages risks at the corporate level. Corporate-level guidelines and risk response measures are discussed with the CFO, the chief executive of risk management. The final risk management directions and decisions are confirmed by the BOD in accordance with the compliance management standards, and the BOD supervises whether the CEO has rightfully reflected their decisions and effectively operates the compliance management system.

Risk Management Activities

Identifying Risks LG Chem derives risks in various aspects through company-wide mid-term strategy, analysis of work process by function, and interview to analyze and manage risks. To respond to rapidly changing business environment, LG Chem operates a working-level

Independent Assurance Statement

Relating to LG Chem, Ltd.'s Sustainability Report for the 2017 calendar year

This Assurance Statement has been prepared for LG Chem, Ltd. in accordance with our contract but is intended for the readers of this Report.

Terms of engagement Lloyd's Register Quality Assurance (LRQA) was commissioned by LG Chem, Ltd. (LG Chem) to provide independent assurance on its 'LG Chem Sustainability Report 2017' ("the report") against the assurance criteria below to a moderate level of assurance using AA1000AS (2008), where the scope was a Type 2 engagement.

Our assurance engagement covered LG Chem's operations and activities in Korea specifically the following requirements:

- ▶ Evaluating adherence to AA1000 AccountAbility Principles of Inclusivity, Materiality and Responsiveness
- ▶ Confirming that the report is in accordance with:
 - ▶ GRI Standards¹: Core option
- ▶ Evaluating the accuracy and reliability of data and information for only the selected indicators listed below:
 - ▶ GRI 200 (Economic): 201-1, 202-2, 203-1, 203-2, 205-3, 206-1
 - ▶ GRI 300 (Environmental): 303-1, 305-1, 305-2, 305-3, 305-4, 305-7, 307-1
 - ▶ GRI 400 (Social): 401-2, 403-2, 404-1, 404-2, 405-2, 408-1, 415-1

Our assurance engagement excluded the data and information of LG Chem's suppliers, contractors and any third-parties mentioned in the report.

LRQA's responsibility is only to LG Chem. LRQA disclaims any liability or responsibility to others as explained in the end footnote. LG Chem's responsibility is for collecting, aggregating, analysing and presenting all the data and information within the report and for maintaining effective internal controls over the systems

LRQA's Opinion Based on LRQA's approach nothing has come to our attention that would cause us to believe that LG Chem has not, in all material respects:

- ▶ Met the requirements above
- ▶ Disclosed accurate and reliable performance data and information as all errors or omissions identified during the assurance engagement were corrected
- ▶ Covered all the issues that are important to the stakeholders and readers of this report.

The opinion expressed is formed on the basis of a moderate level of assurance and at the materiality of the professional judgement of the verifier.

Note: The extent of evidence-gathering for a moderate assurance engagement is less than for a high assurance engagement. Moderate assurance engagements focus on aggregated data rather than physically checking source data at sites. Consequently, the level of assurance obtained in a moderate assurance engagement is substantially lower than the assurance that would have been obtained had a high assurance engagement been performed.

LRQA's approach LRQA's assurance engagements are carried out in accordance with our verification procedure. The following tasks though were undertaken as part of the evidence gathering process for this assurance engagement:

- ▶ Assessing LG Chem's approach to stakeholder engagement to confirm that issues raised by stakeholders were captured correctly. We did this through reviewing documents and associated records.
- ▶ Reviewing LG Chem's process for identifying and determining material issues to confirm that the right issues were included in their report. We did this by benchmarking reports written by LG Chem and its peers to ensure that sector specific issues were included for comparability. We also tested the filters used in determining material issues to evaluate whether LG Chem makes informed business decisions that may create opportunities that contribute towards sustainable development.
- ▶ Auditing LG Chem's data management systems to confirm that there were no significant errors, omissions or mis-statements in the report. We did this by reviewing the effectiveness of data handling procedures, instructions and systems, including those for internal verification. We also spoke with those key people responsible for compiling the data and drafting the report.
- ▶ Reviewing supporting evidence made available by LG Chem at their head office in Seoul, Korea.

Observations Further observations and findings, made during the assurance engagement, are:

- ▶ Stakeholder inclusivity:

We are not aware of any key stakeholder groups that have been excluded from LG Chem's stakeholder engagement process.
- ▶ Materiality:

We are not aware of any material issues concerning LG Chem's sustainability performance that have been excluded from the report. It should be noted that LG Chem has established extensive criteria for determining which issue/topic is material and that these criteria are not biased to the company's management. However, in the materiality process, LG Chem should make more efforts to better reflect reasonably estimable economic, environmental and social impacts for determining significance of relevant issues.
- ▶ Responsiveness:

LG Chem operates, on an annual basis, a CSR committee which is led by CEO and composed by executives from several functions, discussing the risks, deciding what to improve and reviewing its performance associated with corporate social responsibility.
- ▶ Reliability:

LG Chem has reliable data management systems for the indicators in the report. However, LG Chem should review its procedures regarding compiling data and determine where it needs to develop documented guidance to ensure more reliable data, and should also improve the data quality assurance procedures.

LRQA's standards, competence and independence LRQA implements and maintains a comprehensive management system that meets accreditation requirements for ISO/IEC 17021 Conformity assessment – Requirements for bodies providing audit and certification of management systems that are at least as demanding as the requirements of the International Standard on Quality Control 1 and comply with the Code of Ethics for Professional Accountants issued by the International Ethics Standards Board for Accountants.

LRQA ensures the selection of appropriately qualified individuals based on their qualifications, training and experience. The outcome of all verification and certification assessments is then internally reviewed by senior management to ensure that the approach applied is rigorous and transparent.

LRQA is LG Chem's certification body for ISO 9001, ISO 14001 and OHSAS 18001. We also provide LG Chem with a range of training services related to management systems. The verification and certification assessments, together with the training, are the only work undertaken by LRQA for LG Chem and as such does not compromise our independence or impartiality.

LG Chem Code of Conduct for Suppliers

LG Chem, Ltd. (“LG Chem”) is committed to be a global chemical company that carries out its roles and responsibilities as a member of global society. We strive to provide sustainable solutions that can contribute to resolve social/environmental problems, while endeavoring to adhere to the basic principles of sound growth of the business.

We have established the “LG Chem Code of Conduct for Suppliers” based on international norms, standards and legal requirements to fulfill our social responsibilities at global level and to achieve sustainable performances. We particularly expect mutual support from our supplier (the “Company”) to comply with the following standards.

- A.

The Company does not hire any person below the legal working age, and complies with the legal requirements for juvenile labor regarding minimum age, working hours and working conditions.
- B.

The Company prohibits all forms of involuntary labor, including forced labor, labor exploitation, and establishes employment contracts that clearly define the working conditions in the employees' native languages.
- C.

The Company prohibits all forms of discrimination such as race, skin color, age, gender, place of origin, physical disability, pregnancy, religion, political views, labor union membership or marital status in terms of employment, promotion, remuneration, educational opportunities, etc.
- D.

The Company respects the human rights of all employees, and effectuate humane working circumstance by prohibiting any sexual harassment, abuse, punishment, psychological or physical coercion, violent language, etc.
- E.

The Company abides by all legal requirements related to maximum working hours, days of work, minimum wage, welfare and remuneration, etc.
- F.

The Company respects the employee's right to have association and collective bargaining in accordance with local laws and regulations. Employees can communicate with the management with regard to their working conditions without any risk of discrimination, retaliation, threats or harassment.
- G.

The Company maintains the highest level of integrity in all transactions and relations, and strictly prohibits any types of corruption including undue acquisitions of improper advantages or bribery, while fully complying with all legal requirements related to anti-corruption. The Company also guarantees confidentiality and protection of whistle-blowers.
- H.

The Company must comply with legally mandated precautionary measures including evaluating and eliminating hazardous matters, providing regular education and emergency trainings, disseminating personal protective equipment, etc., to ensure that employees can work and live (if accommodation is provided) in a safe and healthy environment.
- I.

All required environmental permits, approvals, and registrations shall be obtained and maintained in the most recent versions. The Company shall devote utmost efforts to minimize the adverse impact of their manufacturing process on the environments and local community, such as hazardous substances, solid waste, waste water, air emissions, resource reduction, etc.
- J.

The Company shall prohibit the use of conflict minerals and materials sourced through any illegal and unethical processes including the processes where human rights are infringed, and shall establish a precautionary system. In addition, the Company must be able to provide due diligence measures of the origin and chain of custody on raw materials in accordance with [Appendix1], and actively cooperate with LG Chem's due diligence.

[Appendix1]

Due Diligence Policy	
1. Due Diligence Target	
Minerals	Conflict minerals (Tin, Tantalum, Tungsten, Gold), minerals mined in conflict affected and high-risk areas such as cobalt
Conflict-Affected Areas	Democratic Republic of the Congo, Sudan, Rwanda, Burundi, Uganda, Congo, Zambia, Angola, Tanzania, Central African Republic
High-risk Areas	The areas where The UNITED STATES DEPARTMENT OF LABOR regulates
2. Due diligence Standard OECD Due Diligence Guidance for Responsible Supply Chains of Minerals from Conflict-Affected and High-Risk Areas	
Establish strong company management system	<div>· Establish Due diligence Policy and management system (Ref : OECD Guidance Annex II)</div> <div>· Communication with stakeholders, including suppliers (Relevant provisions included in the contract)</div> <div>· Supply chain history management</div>
Identify and assess risk in the supply chain	<div>· Identify risks in supply chain</div> <div>· Assess risks of suppliers based on OECD Guidance Annex II</div>
Design and implement a strategy to respond to identified risks	<div>· Devise and adopt a risk management plan identified in the 'Identify and assess risk in the supply chain' phase</div> <div>· Report findings of the supply chain risk assessment and risk management plan to the designated senior management of the company</div>
Carry out supply chain due diligence at identified points in the supply chain	<div>· Due diligence based on OECD Due Diligence Guidance (Conduct independent third-party audit)</div>
Report on supply chain due diligence	<div>· Publicly report on supply chain due diligence result (through Sustainability management report, Annual report, etc.)</div>
