GE ENVIRONMENTAL, SOCIAL AND GOVERNANCE

# Environmental, Social and Governance

2017 ESG RESULTS

GE brings to market innovative solutions that deliver essential energy, healthcare and transportation infrastructure. We work with the highest integrity, compliance culture and respect for human rights while also reducing the impact of our technology and environmental footprint.

## Predix

GE's Industrial Internet Predix solutions leverage the power of software to drive breakthrough levels of performance across a diverse set of industrial assets

Learn More

## Digital Wind Farms

Combines GE's modular 2MW turbine platform with robust digital infrastructure

Learn More

## Solid Oxide Fuel Cell

Building a more cost-effective Solid Oxide Fuel Cell that can get 60%+ efficiency

Learn More

## CFM Leap Engine

GE's next generation jet engine that includes ceramic components and 3-D printed parts

Learn More

## 9HA Turbine

The 9HA is GE's latest, industry-leading high-efficiency, air-cooled gas turbine for large utility applications

Learn More

## Evolution Tier 4 Locomotive Engine

The new Evolution Tier 4 Locomotive reduces emissions by more than 70% from Tier 3 technology

Learn More

## Setting Priorities

GOVERNANCE

The GE Board of Directors and its committees oversee the execution of GE's Environmental, Social and Governance (ESG) strategy as part of their oversight of business strategy and risk management. In 2017, the Board reviewed ESG-related topics such as EHS Programs and Political Contributions.

Learn More

We select priority issues where both the need as expressed by critical stakeholders and GE's unique potential for impact are greatest. For each ESG priority, we employ GE's deep expertise and advanced technologies to improve outcomes. Based on this process, GE's ESG Steering Committee selected the following priorities:

- Integrity & Compliance
- Human Rights
- Climate & Energy

## Committed to EHS Excellence

We are committed to EHS excellence to protect our people, our communities and GE. We hold ourselves to the same high expectations and standards everywhere we work, and we assess the EHS impacts of our businesses globally before, during and after operations. Our site, project and service managers are accountable for the EHS performance of the operations, employees, and contractors they supervise, and we monitor this performance through indicators such as injury rates and global greenhouse gas emissions. EHS excellence is fundamental to who we are—it is what our leaders expect and our customers demand.

Injury & Illness Recordable Case Rate, 2017, down 18% YoY **0.63**

Reportable Environmental Events, 2017, down 28% YoY **63**

Sites with ISO 14001 Certifications, 2017 **332**

2020 GHG and Water Goal, Reduction from 2011 (%) **20%**

Freshwater Reduction 2011-2017, vs 20% 2020 goal (%) **25%**

Greenhouse Gas Reduction 2011-2017, vs 20% 2020 goal (%) **27%**

## Climate

GE supports carbon policies to reduce emissions and encourage businesses to do what they do best: innovate and compete to create and disseminate new technologies and solutions at the lowest net cost. The Paris Agreement will lead to efforts around the world to reduce global greenhouse gas emissions. GE plays an important role by providing more energy efficient, cleaner and more cost-effective products to our customers in the power, aviation, healthcare and other industries that we serve. We are committed to reducing the environmental impact of our own operations, while enabling our customers and partners globally to do the same through our products and solutions.

## Conflict Minerals, Supplier Diversity

Select

Conflict Minerals

### Conflict Minerals

Virtually all of GE's products contain one or more of the minerals tin, tantalum, tungsten and gold (3TG). The mining and trade of these materials from the Democratic Republic of Congo (DRC) and surrounding countries have gained international attention in recent years for the role that they can play as "conflict minerals," financing deadly armed groups in the region. Because of this potential for association with conflict and human rights abuses, GE strives to ensure that our supply chains are ethical and sustainable, and that we are fulfilling our commitment to respect human rights through responsible sourcing practices.

As part of these efforts, GE has instituted a statement of principles on conflict minerals, and we have submitted a report to the Securities and Exchange Commission on our due diligence program. We support industry-wide due diligence mechanisms that enable conflict-free sourcing in general, such as the Responsible Minerals Initiative, and responsible sourcing of minerals from the DRC in particular.

We recognize that conflict is just one of the risks related to mineral sourcing in the DRC, and that critical issues such as poverty, environmental degradation, child labor and gender inequality must be addressed as well. Done ethically, production of 3TG in the DRC presents a unique opportunity to contribute to peace and stabilization as well as to local economic development and poverty alleviation. Faced with this reality, we support local development in the DRC mining communities through engagement and philanthropy, including GE Foundation sponsorship of an influential study released in 2014 by the NGO Pact entitled "Breaking the Chain: Child Mining in the Democratic Republic of Congo."

GE's 2017 Conflict Minerals Report can be found here.

Supplier Diversity

### Supplier Diversity

The GE Supplier Diversity Program was launched in 1974 to ensure that we focus on doing what is right for our communities and our Company. We engage our pool of suppliers for best practices and high-quality goods and services, while enhancing economic opportunity. We believe that excellence in supplier diversity can result in excellence in supply chain management and lead to growth for all. We continually strive to grow our diverse supplier base, and annually, we recognize those in the Company who successfully support our Supplier Diversity Program.

Core components of the GE Supplier Diversity Program are as follows:

- The Extra Step Award Program, which recognizes and rewards GE employees in the United States for finding, developing and doing business with small, competitive women-, veteran-, LGBT+ and minority-owned U.S. suppliers. We present the Extra Step Award to US based employees throughout all of the GE businesses, with senior executives participating in the ceremony. The award includes a trophy, and recognition across the Company, and has been given to more than 600 employees since 1976 for their efforts in finding, developing and doing business with diverse suppliers.
- Individual businesses also participate in regional and local supplier diversity activities to support their specific business needs.

**Sourcing Contacts for Diverse Suppliers**

Before submitting your company information, we encourage diverse suppliers to review the GE Business sections of www.ge.com so you can further enhance your understanding of GE and identify which GE businesses are suitable for your company's products and/or services.

Diverse suppliers can submit company information as follows:

1. Ensure your company is certified as a diverse supplier. For instructions on how to do this, visit the National Minority Supplier Development Council website or Women's Business Enterprise National Council website.
2. Once you have identified a GE business as a potential customer, you should go to that business' website, follow the instructions on the site to register your company and make sure that, at a minimum, the following information is provided: Company name and description, brief explanation of why your company would be a good fit, supplier diversity certification and your contact information.

### Ethical Supply Chain Program

Suppliers are critical partners in GE's value chain. As GE's businesses have globalized, so has our supply chain, including in locations where environment, health, safety, labor, human rights and other practices can be problematic. We expect our suppliers to obey the laws that require fair treatment of workers, a safe and healthy work environment, and environmental protection.

Learn More

### Supplier Initiatives

We believe that working with suppliers will enable us to identify projects that will have both operational and environmental benefits while building stronger relationships and reducing our supply chain costs.

GE ENVIRONMENTAL, SOCIAL AND GOVERNANCE

# Integrity

SEE OUR HISTORICAL OPEN REPORTING TRENDS

## GE infuses compliance and governance into every aspect of its business.

We are committed to maintaining a world - class compliance culture in every GE business and everywhere we operate around the world. We recognize that our reputation for integrity and compliance is a competitive advantage, and are proud to have been honored as one of Ethisphere's World's Most Ethical Companies for 12 straight years (2007 – 2018).

## At the heart of GE's Integrity & Compliance program is The Spirit & The Letter.

GE's commitment to performing with integrity is instilled in every employee as a nonnegotiable expectation of behavior. This expectation is guided by our integrity policy, *The Spirit & The Letter*, and is underscored by an extensive system of policies, processes, training and communications. A summary of the most critical elements is available as a *Simple Reference Guide*.

See More

## GE's Integrity & Compliance program focuses on prevention, detection and response.

It begins with personal engagement on integrity from GE's leadership and is supported by robust compliance processes. GE leaders personally drive a culture of integrity everywhere GE operates – everyone, everywhere, every day, achieve the active oversight of compliance risk areas.

## A hallmark of GE's compliance program is a steadfast commitment to a vibrant, well-publicized and effective "open reporting environment."

Employees are encouraged to raise integrity concerns and to feel confident that they can do so without fear of retaliation. GE employees remain the Company's first and best line of defense in the early detection of potential compliance issues. During 2017, more than 4,440 integrity concerns were reported, leading to 1,423 disciplinary actions as of March, 2018.

Historical Open Reporting trends

## Elements of Our Program

GE strives to be out in front of significant compliance risks to ensure the Integrity & Compliance program is evolving as new risks emerge. With changing workforce demographics and modes of communication, our program requires constant reinvention to stay relevant for a global community.

### Simplification (Prevent)

GE believes that simpler compliance is better compliance, and therefore has been making strides to simplify the program. For example, in 2016, GE began piloting compliance-based training within the applications employees use each day.

### Data (Detect)

Data is increasingly important in how we work. Systems and processes result in data that can yield insights into program health. For example, in 2016 we piloted a monitoring program for business courtesies.

### Working Horizontally (Respond)

It's increasingly important to get the balance right between local and global processes. Where controls are similar, GE finds that one policy and process results in better outcomes. For example, the centralized business courtesies monitoring.

## GE's policy against improper payments in business transactions is a key element of The Spirit & The Letter and represents a core belief in how we do business.

GE's approach to compliance in this critical area is multifaceted. GE's policy against improper payments in business transactions is a key element of *The Spirit & The Letter* and represents a core belief in how we do business. Among its key features are: policies and procedures, controls, investigation and remediation, training, due diligence, and Corporate Audit Staff support.

GE SUSTAINABILITY

# Public Policy

GE approaches public policy through education, engagement, involvement and thought leadership. We inform discussions by promoting thoughtful civil discourse grounded in strong, reasoned analysis. We work in partnership with governments, believing that tackling the world's biggest problems is possible only if governments and industry work together as partners.

## Public Policy

GE evaluates its public policy priorities annually considering potential business and reputational risks.

Setting Public Policy priorities

## Political Contributions

GE and GEPAC make bipartisan contributions where legal and appropriate under applicable law.

Political Contributions Policy

## Lobbying Disclosure

GE employees educate local, state and federal officials on our Company's operations and more.

Lobbying Disclosure Policy

## Reports & Disclosures

### Public Policy Priorities

Although deal approvals or other onetime matters can sometimes become priorities, ***tax, trade, energy, healthcare, infrastrucutre, data governance, rule of law and intellectual property protections*** typically top our list of Public Policy Priorities.

View Public Policy Priorities

### Political Contribution Reports

GE ***reports semi-annually*** on corporate payments to candidates, committees, 527 groups, ballot initiatives, with archived reports available from the previous 5 years. Information on GEPAC contributions is also included.

View Political Contribution Reports

### Quarterly Lobbying Disclosure Reports

Advocacy on pending U.S. legislation is included in GE's Lobbying Disclosure Act filings. GE's posts links to quarterly lobbying reports from the previous 5 years.

View Lobbying Disclosure Reports

### Government Business

GE does business with federal, state and local governments, as well as with government contractors.

GE's compliance and integrity culture places the Company in an excellent position to pursue and perform work compliantly for governments and government contractors. But we don't just rely on our culture; we continue to emphasize with our employees and executives, how working with governments is unique.

# Greenhouse Gas and Energy Inventory Process

*Updated July 2018*

## Methodology

The GE Greenhouse Gas (GHG) Inventory follows the World Resources Institute/World Business Council for Sustainable Development (WRI/WBCSD) *Greenhouse Gas Protocol: A Corporate Accounting and Reporting Standard, Revised Edition* (the "Protocol"). GE reports under the "control" approach for emissions in Scopes 1 and 2, as defined in the Protocol, from sources over which it has operational control. Selected Scope 3 emissions are reported.

## Inventory Scope

The GHG Inventory includes data from individual facilities (primarily manufacturing facilities), additional rooftops (primarily offices, warehouses and small service shops), and the vehicle and air fleets that GE operates for its own use. The inventory scope is adjusted annually as a result of divestiture, closure or consolidation with other facilities, acquisitions, newly established facilities or when facilities meet the reporting criteria for the first time.

GE's worldwide GHG emissions are the total of three categories:

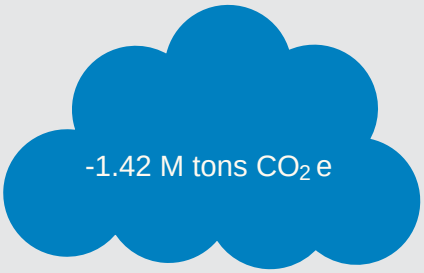
- Energy use and emissions data from the largest facilities in the Company
- Emissions estimates for small facilities
- Mobile source emissions from centrally managed vehicle fleets and aircraft

## Emission Factors and Global Warming Potentials

GE uses emission factors primarily from the U.S. EPA Mandatory GHG Reporting Rule (40 CFR part 98) to calculate $CO_2$ emissions for combustion of fuel. The 100-year global warming potential (GWP) for $CH_4$, $N_2O$, HFCs, $SF_6$ and PFCs are also taken from the U.S. EPA Mandatory GHG Reporting Rule (40 CFR part 98). Emissions of $CH_4$ and $N_2O$ from the combustion of fuels are calculated using emissions factors obtained from EPA Climate Leaders program documents. Other direct emission factors are obtained from WRI and IPCC documents when U.S. EPA factors are not available.

GE uses U.S. EPA eGRID sub-regional average emission factors to calculate indirect emissions resulting from the purchase of electricity in the United States. Indirect emissions resulting from the purchase of electricity outside of the U.S. are calculated using countrywide average factors obtained from the International Energy Agency (IEA). Electricity emissions for the 2011 baseline year were calculated using EPA eGRID factors for 2010 and IEA factors for 2011. Electricity emissions for the current reporting year are calculated using the most recent grid emissions factors available from the EPA and IEA as of the month of January following the reporting year.

### Our Climate Progress



*Since 2011, GE has reduced operational greenhouse gas emissions by nearly 1.42 million metric ton $CO_2$-equivalents.*

www.ge.com/sustainability

sustainability@ge.com

# Greenhouse Gas and Energy Inventory Process

Whenever readily available, GE uses the market-based emission factor for Scope 2 calculations. These emission factors are typically for specific, traceable purchases of renewable energy from our operations.

## Large Sites

GE maintains a GHG Inventory database in a cloud-based environmental management system to collect the necessary detailed inventory data from the following types of facilities:

- All manufacturing, power generation and engine/turbine test facilities
- All service and distribution facilities with greater than 50 employees
- All major business headquarters
- All major stand-alone data centers

The GHG Inventory database allows each site to enter the quantity of electricity and fuel used by fuel type and the unit of measure based on its own electricity and fuel purchase and/or combustion records as well as data on emissions of other GHGs. The software system calculates the emissions, in metric tons of $CO_2$ equivalents, for each emission category as well as a total for all emission categories.

The software system calculates direct-combustion emissions by multiplying a given quantity of fuel by an emission factor and calculates indirect emissions for electricity that was purchased by multiplying a given quantity of electricity by an emission factor. Direct emissions resulting from the generation of electricity for export off-site are included within direct emissions. The Protocol recommends this approach and instructs companies to report emissions from exported electricity, heat or steam under supporting information and not to deduct those emissions from company emissions.

The Inventory includes sites in Europe and Asia that import steam or hot water from third-party cogeneration plants or district heating plants. Each of these sites determined the quantity and type of fuel needed by the third-party plant to generate the steam or hot water purchased by the site. This quantity of fuel is then multiplied by the appropriate emission factor to determine the indirect emissions from steam or hot water purchases. A default thermal efficiency of 80% is used to calculate the quantity of fuel needed to generate the steam or hot water that was purchased based on guidance provided in the WRI/WBCSD Emission Calculation Tool. Most of the plants use the default thermal efficiency.

Emissions of other GHGs (direct-process emissions of $CO_2$, $CH_4$, $N_2O$, HFCs, $SF_6$ and PFCs) are entered directly as kilograms or metric tons and converted to metric tons of $CO_2$ equivalents using the EPA's published 100-year GWP coefficients. Generally, emissions are based on purchase records and the assumption that all used material was emitted. For certain processes, however, site-specific knowledge of the process and/or emissions factors are used to determine actual emissions.

GE quantifies biomass-related emissions as allowed by the WRI Protocol. GE subtracts a certain amount of metric tons of $CO_2$ from its GHG inventory as those emissions are attributed to the use of biomass as allowed by the Protocol.

Because a subset of "large sites" are responsible for about 80% of the emissions in this category, GE collects all data from that group of facilities annually. Data for the smaller sites is collected less frequently and prorated in interim years based on historical data.

## Small Sites

GE does not collect detailed emissions data from worldwide "small" locations due to the difficulty and expense that would be associated with such an effort in comparison to the relative significance of the emissions in GE's overall inventory. The sites that fall into this category are primarily small office facilities, but include all locations that do not meet the criteria defined above for "large sites."

Emissions for these small facilities are calculated based on the "COMMERCIAL BUILDINGS ENERGY CONSUMPTION SURVEY (CBECS)", published by the U.S Energy Information Administration. Using this tool, GE determines the expected electricity and natural gas usage for a facility based on the type, location and square footage of the facility. GHG emissions are calculated using this estimate of energy usage and the appropriate emission factor as described above for Large Sites.

## Mobile Sources

GE calculates emissions from motor vehicles centrally managed by third party contractors in the U.S., Canada, Europe, Japan, Australia, New Zealand and Mexico; motor vehicles leased or rented from Penske Truck Leasing and Ryder Logistics in the U.S.; and motor vehicles owned by GE businesses in the U.S. In addition, GE calculates emissions from GE-owned corporate aircraft including the flying test bed (a large airliner used for flight-testing jet engines). Mobile source emissions are calculated by obtaining fuel use and/or vehicle-miles-traveled records and applying appropriate emission factors obtained from the U.S. EPA Climate Leaders guidance documents. Methane and nitrous oxide emissions for mobile sources are also calculated using emission factors obtained from the U.S. EPA Climate Leaders program guidance documents. In addition, GE includes emissions from GE-controlled motor vehicles that are refueled on-site at GE Large Sites. The emissions from these vehicles are included in the combustion-of-fuels calculations for Large Sites discussed above.

# Greenhouse Gas and Energy Inventory Process

## Scope 3 Sources: Power Generation Investments

GE invests in thermal and renewable energy projects through equity, lease and debt. GE reports GHG emissions from investments in which GE holds an equity interest based upon the business unit's percentage of equity ownership.

## Sources Not Included

GHG emission sources not included in the Inventory because GE does not have operational control over them include the following:

- Minority-owned joint ventures
- Energy-generation facilities where GE has a service relationship, but where GE does not have operational control
- Aircraft, motor vehicles, railroad locomotives, etc., owned by GE, but leased to and controlled by others
- Most WRI/WBCSD Scope 3 sources. Equity investments in power generation facilities are included as indicated above

The following operational emission sources are not included in GE's GHG Inventory due to very small contributions:

- Motor vehicles controlled by GE but not centrally managed through Element, Arval, Penske Truck Leasing, or Ryder Logistics
- Motor vehicles owned by GE businesses outside the United States and Canada that are not refueled at GE properties
- Leakage of hydrofluorocarbons from GE-owned and -operated air conditioning, refrigeration and chilling systems
- Remedial activities operationally controlled by GE

## Baseline Adjustment

GE has established 2011 as a baseline year for measuring progress toward achieving its GHG-emissions-reduction commitments. Baseline-year GHG-emissions data are adjusted to reflect the changes in GE structure and determine the real change in emissions and energy use of the current portfolio of operations during a given period. Prior interim years, such as 2014, are not adjusted.

All "large sites" as defined above are baseline adjusted per the GHG Protocol, with acquired sites added and divested sites removed. Individual small sites, of which the largest is less than 0.1% of the total company GHG emissions, are not baseline adjusted. However, when an entire GE business is divested or acquired, the small sites from that business are baseline adjusted. Mobile sources are not baseline adjusted.

For the 2015 inventory, significant adjustments were made to account for the acquisition of Alstom. Other smaller adjustments were made to account for the divestiture and acquisition of various GE subsidiaries.

## Quality Assurance

GE is continuing to work toward increasing the accuracy of its GHG Inventory. It has modified its GHG Inventory collection database to simplify it and to eliminate issues that have tended to introduce errors in the past. In addition, GE has developed numerous guidance documents and an internal guidance website, and has provided extensive training on the Inventory and on the use of the management system. As an added measure, GE periodically performs data-quality reviews on the GHG Inventories, including side-by-side comparisons of GHG emissions across years, to identify and understand the reasons for significant differences (changes in production, fuel, manufacturing processes, etc.). When data-quality issues are identified, research is initiated to analyze and correct gaps where necessary.

As described in this document, most of the emissions total is based on actual fuel usage and energy purchase data (about 70%) or extrapolated in time based on prior usage data (about 15%). The remaining 15% of the total is estimated using other attributes (such as the size and location of rented small office space, or distance driven by some vehicle categories). Due to this combination of actual and estimated data, the overall uncertainty of the Scope 1 and Scope 2 totals is estimated to be less than 5%.

## Independent Verification of the 2004 and 2008 GE GHG Inventories

GE periodically may retain an independent consultant to review the Inventory and process. Cameron-Cole, LLC, was retained in 2005 and again in 2009 for independent verification of the GHG methodology. Cameron-Cole issued verification statements in March 2006 and December 2009, respectively, stating that it found nothing to indicate any material errors or omissions or anything that would indicate that GE's Inventory was not complete. Cameron-Cole also found that GE's Inventory generally conformed to the accounting principles in the Protocol. In addition, Cameron-Cole stated that it believed that GE had met its 2008 GHG-intensity-reduction commitment.

## Analysis of Cumulative GHG and Energy Efficiency Projects

GE is focused on generating value and outcomes for our customers, the Company, people and the planet. One way to measure that value is to track energy efficiency and GHG reduction projects. GE does this in a cloud-based management system. Each project

logged includes descriptive information, projected costs, and estimated GHG and cost savings. Two cumulative measures of those projects are tracked over time: total GHG emissions reduced and total cost savings.

To estimate total GHG emissions reduced and costs saved, GE analyzes all projects in the database covering the given period logged as being completed. The sum of estimated GHG reduction for all matching projects is captured as estimated annual GHG and cost reduction due to interventions. This process is repeated for subsequent years and compounded annually. Prior years are not adjusted for business transformations, changes in grid factors or other changes.

GE has not purchased project-based carbon credits to offset GHG emissions from our operations.

## Calculation of Long-term Progress

As described above in "Baseline Adjustment," current progress toward the 2020 GHG goal was baselined in 2011. GE also may report progress against a baseline year of 2004. Since it is not practical to adjust baselines over such long periods where sufficient data may not be available, a hybrid approach is used. The 2004 baseline was adjusted for the 2011 reporting year data. Current progress from the 2004 baseline is calculated by taking the performance from 2004 to 2011 as a fixed value (29% absolute reduction) and further reducing that result by the additional reduction between 2011 and the current reporting year.

GEA33631 7/2018

# Water Inventory Methodology

*Updated July 2018*

## Methodology

GE's water-use inventory process follows the principles articulated by the World Resources Institute/World Business Council for Sustainable Development (WRI/WBCSD) in its *Greenhouse Gas Protocol: A Corporate Accounting and Reporting Standard, revised addition*. For the operational inventory, GE follows follow the "control" approach and includes freshwater use from "criteria sites" over which the company has operational control.

## Inventory Scope

GE collects water-usage data from the top water-consuming sites, called "criteria sites". Criteria sites are those that have used 15 million gallons or more of water per year between the baseline and current year. This approach captures approximately 90% of GE's total freshwater consumption.

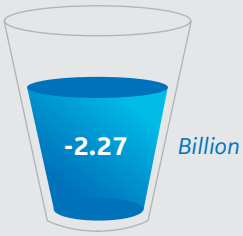
Water usage captured includes potable, process, and sanitary water, as well as once-through cooling water from freshwater sources. Sites that withdraw salt/brackish water for once-through cooling purposes are not included in the water-reduction goal. Instead, GE focuses on freshwater sources, based on the rationale that those sources pose a greater environmental impact than salt/brackish water use.

The inventory scope is adjusted annually as a result of divestiture, closure or consolidation with other facilities, acquisitions, newly established facilities or when facilities meet the reporting criteria for the first time.

## Management

To collect the necessary water-use-inventory data, GE maintains a greenhouse gas (GHG) and water inventory database. The database is integrated with GE's greenhouse gas and energy inventory processes. GE facilities use the database to enter quantities of water withdrawn from each of the following source categories:

- Public/commercial
- On-site groundwater well
- Fresh surface water
- Brackish surface water or seawater
- Rainwater



**Since 2011,** GE has reduced freshwater use by about 2.27 billion gallons of freshwater per year.

*GE collects water-usage data from our top water-consuming sites on an annual basis.*

www.ge.com/sustainability

sustainability@ge.com

# Water Inventory

Water withdrawn for the purpose of once-through cooling is entered into a separate category in the database so that these cooling water sources may be tracked. The system also splits water-use data from the database into source category, business unit, site, country, and region.

## Baseline Adjustment

Current progress toward the 2020 water goal was baselined in 2011, with the baseline data adjusted to reflect changes to GE's portfolio as outlined in the Greenhouse Gas Protocol. GE also reports progress since the start of the water program, with a baseline year of 2006. Because it is not practical to adjust baselines over long periods where sufficient data may not be available, a hybrid approach is used. The 2006 baseline was adjusted for the 2011 reporting year data. Current progress from a 2006 baseline is calculated by taking the performance from 2006 to 2011 as a fixed value (35% absolute reduction) and further reducing that result by the additional reduction between 2011 and the current reporting year.

## Quality Assurance

To further increase the accuracy of the water-use inventory, GE has simplified the database to reduce the opportunity for error. In addition, GE provides guidance documents, an internal guidance website, and extensive training related to the water inventory and the use of the tool. Finally, GE performs data-quality reviews on the water-use inventory, including side-by-side comparisons of water-use data to identify and understand the reasons for significant differences (such as changes in production, changes in processes, water-use-reduction projects, or other factors). Data anomalies are identified, analyzed and corrected where necessary through this process. If significant deviation in water use emerges in a given year, a third-party environmental engineering consulting firm may be engaged to validate restated water-use values.

GEA33640 7/2018

# Voluntary Waste Inventory Methodology

*Updated September 2018*

## Methodology

Each year, GE collects waste generation data from larger industrial facilities for the purpose of voluntarily reporting total hazardous and nonhazardous waste volumes. As part of GE's environmental inventory, the waste inventory process follows the principles articulated by the World Resources Institute and the World Business Council on Sustainable Development (WRI/WBCSD) in its *Greenhouse Gas Protocol: A Corporate Accounting and Reporting Standard, revised edition*. For the operational inventory, GE follows the "operational" approach and includes total volumes data from the most relevant sites over which we have operational control.

## Inventory Scope

Sites in scope for voluntary waste reporting are those that have generated or will continue to exceed 500 metric tons per year of total nonhazardous or 100 metric tons of hazardous waste per year. However, GE collects primary data only from sites exceeding 3000 metric tons per year of total nonhazardous or 200 metric tons of hazardous waste per year. Waste generated by sites in scope, but not meeting primary data requirements, is collected less frequently and prorated in interim years based on historical data. Data from "small" locations (such as offices) and non-fixed facilities (such as on-site customer projects and investments in energy projects) is not collected.

Thresholds are based on a historical analysis of GE's waste generation data for a significant coverage of the full GE operational waste footprint.

Reported hazardous waste volumes cover all industrial waste with hazardous characteristics and/or toxic constituents that is regulated at country level. Nonhazardous waste includes all industrial waste that does not meet the definition of hazardous waste and that needs to be segregated. Reported nonhazardous waste streams are limited to wastes and recyclable materials generated from industrial activities such as production, assembly, manufacturing, field sales and service, maintenance, laboratories, cleaning, demolition, renovation, remediation, packaging, and equipment taken out of service. Nonhazardous waste does not include food waste, office waste, wastewater and one-time, rarely generated waste.

*GE conducts an accounting of global hazardous and non-hazardous waste generated by its facilities.*

www.ge.com/sustainability

sustainability@ge.com

[1] For the 2017 inventory, two major GE acquisitions (Baker Hughes, a GE company, and LM Wind Power) continued to separately conduct independent waste inventory processes and are not covered by the general GE approach. Data provided by these entities is directly used for estimating and reporting on total GE volumes.

# Voluntary Waste Inventory Methodology

## Inventory Management

The inventory scope is adjusted annually as a result of divestiture, closure or consolidation with other facilities, acquisitions, newly established facilities or when facilities meet the reporting criteria for the first time. Also, disclosed 2016 data is adjusted accordingly. The correction factors used to estimate total volumes (of large and very-large sites) out of reported data are reestablished based on the most recent data from very-large sites and total volume data from previous years.

GE uses a cloud-based environmental management system to collect the necessary detailed inventory data from sites. GE facilities enter waste quantities mainly from two data sources:

- A waste generation database integrated into the GE's EHS data management system
- Waste generation data provided by third party waste vendors

Reported site-level data is aggregated and analyzed by business unit, country, and region.

## Quality Assurance

The list of sites required to report primary data is reviewed and validated by a team of regional corporate EHS managers to ensure key business changes are captured. Each year, GE updates guidance documents and training for the waste inventory process and use of the online tool. Finally, GE performs data quality reviews, including site-level comparisons of reported volumes over the last years to identify and understand the reasons for significant changes (such as changes in production, changes in reporting scope or other factors such as one-time effects). Data anomalies are identified, analyzed with reporting site managers and corrected when necessary. The inventory process as well as the gathered data and estimated total volumes are internally reviewed. Areas for further improvement are identified and discussed with involved parties at corporate and business levels.

GEA33911 7/2018

# Minimizing Impact

*Updated July 2018*

Energy and climate represent two of the most important challenges of this century. Energy—its generation, use, and transmission—is critical to both the global economy and individual advancement. Finding ways to help economies meet rising demand for energy while reducing environmental impact and improving lives is essential for economic and human development. At GE, we are committed to reducing the environmental impact of our own operations,while enabling our customers and partners globally to do the same through our products and solutions.

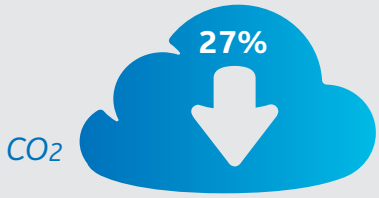
GE plays an important role in the energy sector by providing its customers with more energy-efficient, cleaner and more cost-effective solutions and technologies to meet rising energy demand. For example, GE recently launched the GE Reservoir, a flexible, compact energy storage platform for the grid. As clean but variable power sources like wind and solar start to become a larger part of the energy matrix, energy storage can help keep the grid in balance and increase power availability. The fundamental building block for the platform is the 1.2 megawatt, 4 megawatt-hour Reservoir storage unit, which enables up to 15% longer battery lifecycle than previous systems and holds enough energy to provide power to a community of 120 homes for an entire day. Additionally, GE's Haliade-X 12-megawatt turbine will be capable of powering 16,000 homes and producing 67 gigawatt-hours per year, based on wind conditions of a typical German North Sea site. That represents 45% more energy than any other offshore wind turbine available today.

At the same time we are working in our operations and value chains to increase resource efficiency. We measure progress through our 2020 commitments to reduce our greenhouse gas (GHG) emissions and freshwater use by 20%, from the 2011 baseline. Within our own operations, we have reduced our GHG emissions by 27% and freshwater use by 25% through 2017, from the 2011 baseline.

## Greenhouse Gas Progress

In 2017, GHG emissions from GE operations were 3.8 million metric tons of carbon dioxide equivalents ($CO_2e$), a reduction of 27% from our adjusted 2011 baseline. This was due to better control of key gases, such as sulfur hexafluoride in manufacturing processes, energy-efficiency projects, changes in business structure, and changes in overall grid emission factors.

Our current progress is in addition to significant reductions in absolute GHG emissions from 2004 through 2011. Overall, by 2017 we have reduced GHG emissions at GE by 48% from the onset of our program in 2004. For more information on how we calculate our GHG emissions, please see our GHG Methodology on the GE Reports Hub.



**Reduced** our greenhouse gas emissions by **27%** and freshwater use by **25%** through 2017, from the 2011 baseline

www.ge.com/sustainability

sustainability@ge.com

# Minimizing Impact

## Water Progress

GE has long believed that it is important to manage our water footprint. In 2017, our overall freshwater use at criteria sites was 6.7 billion gallons, a reduction of 25% from our adjusted 2011 baseline. This also represents a 51% reduction from our 2006 water usage. For more information on how we calculate our freshwater use, please see our Water Inventory Methodology on the GE Reports Hub.

## Energy Efficiency

Optimizing energy use is a key pillar in achieving our 2020 goals. GE facilities have several tools available to identify opportunities and manage energy consumption; among them are Energy Treasure Hunts, GE's Brilliant Factory initiative, and energy use analytics. We continue to use the Energy Treasure Hunt process, leveraged from Toyota, to identify projects that drive efficiency in our operations. GE employees in a variety of operational roles lead Treasure Hunts, and we've shared this approach with our customers and suppliers. In 2017, energy-reduction assessments were completed at 23 sites.

## GE Solutions Powering Progress

A focus in driving progress toward our 2020 goals is to leverage our own expert technology, which can increase energy efficiency and generate operational savings. Leveraging the GE Store for solutions such as renewable energy, energy efficiency, and digital solutions are effective levers for our continued progress.

We know our work is not done. We continue to innovate, develop, and implement technologies to further reduce GE's emissions and energy use.

GEA33725 7/2018

# LRQA Assurance Statement

## 2017 ISO 14001 Attestation Statement for GE

### Terms of Engagement

Lloyd's Register Quality Assurance, Inc. ("LRQA") was engaged by GE to review GE's enterprise-wide environmental management system[1] ("*the EMS*") against the requirements of the international standard for environmental management systems, ISO 14001:2015.

The objectives of the review were:

- To confirm that the design of *the EMS* was aligned with ISO 14001 and had incorporated all of the individual management system elements;
- To confirm that *the EMS*, established at the GE Corporate Level, was the primary mechanism used to manage the environmental aspects of operations at all levels and operating locations in the GE organizational hierarchy[2]; and
- To confirm that implementation of *the EMS* had contributed to reported improvements in environmental performance.

### Management Responsibility

GE's management was responsible for designing and maintaining *the EMS*. LRQA's responsibility was to carry out an assurance engagement on *the EMS* in accordance with our contract with GE. Ultimately, *the EMS* and its implementation remain the sole responsibility of GE.

### LRQA's Approach

The review of GE's EMS was undertaken between March 2017 and July 2017 using a team of LRQA's certified ISO 14001 lead assessors. In order to form our conclusions, the assurance was carried out as a sampling exercise and covered the following activities:

- A review of the high level environmental system documentation to confirm that all requirements of ISO 14001 had been addressed;
- Interviews with leaders at the corporate level , responsible for key environmental functional areas within GE's OneEHS organizational structure. These areas included the EHS Leadership Team including the VP EHS, Business EHS leadership, Enterprise Standards, EHS Regional Operations, Resource Strategies including the Product Lifecycle Center of Excellence, and EHS Legal;
- A review of environmental records maintained on the GE enterprise-wide data management system supporting implementation of internal audit, corrective action, training, performance improvement and other programs; and
- Site visits to review local EMS implementation at three operating sites, selected to provide a representative sample based on size and complexity, geography, GE business-area and ISO 14001 certification status.

---

[1] GE's proprietary EMS, consisting of Framework 2.0 and supporting management system programs, is established at the GE corporate level for deployment throughout GE's global operations. Implementation across the GE enterprise is intended to follow a risk-based approach whereby application of the Framework at the various organizational levels dictates the specific programs within the EMS that are required at each individual operational unit.

[2] Alstom, recently acquired by GE, was excluded from the scope of the engagement.

## LRQA's Opinion

Based on LRQA's approach, it is our opinion that:

- The design of *the EMS* was aligned with ISO 14001:2015. No elements of the standard were identified which had not been addressed as documented requirements of *the EMS*;
- At the sites sampled, environmental management systems had been established based on requirements of *the EMS*;
- Based on a review of records maintained on the enterprise-wide data management system, no evidence was identified to indicate sites were implementing environmental management systems other than those established through implementation of *the EMS*; and
- Programs and initiatives linked to implementation of *the EMS* were contributing to reported improvements in environmental performance.

The opinion expressed is formed on the basis of a limited level of assurance. Consistent with this level of assurance, and the approach described above, the assurance is not intended to replace or otherwise be considered equivalent to ISO 14001 certification, as provided under established accreditation programs.

## LRQA's Recommendations

Observations, including areas for potential improvement, were provided in a report to GE's management. These observations do not affect the opinions expressed in this assurance statement.

# LRQA Assurance Statement

## 2018 ISO 14001:2015 and OHSAS 18001:2007 Attestation Statement for GE

### Terms of Engagement

Lloyd's Register Quality Assurance, Inc. ("LRQA") was engaged by GE to review GE's enterprise-wide EHS management system[1] ("*the EHS System*") against the requirements of the international standards for environmental management systems, ISO 14001:2015, and health and safety management systems, OHSAS 18001:2007

The objectives of the review were:

- To confirm that the design of *the EHS System* was aligned with ISO 14001 and OHSAS 18001 and had incorporated all of the individual management system elements;
- To confirm that *the EHS System* established at the GE Corporate Level, was the primary mechanism used to manage occupational health and safety and the environmental aspects of operations at all levels and operating locations in the GE organizational hierarchy; and
- To confirm that implementation of *the EHS System* had contributed to reported improvements in health, safety and environmental performance.

### Management Responsibility

GE's management was responsible for designing and maintaining *the EHS System*. LRQA's responsibility was to carry out an assurance engagement on *the EHS System* in accordance with our contract with GE. Ultimately, *the EHS System* and its implementation remain the sole responsibility of GE.

### LRQA's Approach

The review of GE's EHS System was undertaken between April 2018 and August 2018 using a team of LRQA's certified ISO 14001 and OHSAS 18001 lead assessors. In order to form our conclusions, the assurance was carried out as a sampling exercise and covered the following activities:

- A review of the high level EHS System documentation to confirm that all requirements of ISO 14001 and OHSAS 18001 had been addressed;
- Interviews with leaders at the corporate level responsible for key EHS functional areas within GE's OneEHS organizational structure. These areas included the EHS Leadership Team, including the General Manager EHS, Business EHS leadership, Enterprise Standards, EHS Regional Operations, Sustainability & ESG Operations and EHS Legal;

[1] GE's proprietary EHS System, consisting of Framework 2.0 and supporting management system programs, is established at the GE corporate level for deployment throughout GE's global operations. Implementation across the GE enterprise is intended to follow a risk-based approach whereby application of the Framework at the various organizational levels dictates the specific programs within the EHS System that are required at each individual operational unit. Only GE organizations adhering to the central EHS management system are included in this attestation.

- A review of environmental, health and safety records maintained on the GE enterprise-wide data management system supporting implementation of internal audit, corrective action, training, performance improvement and other programs; and
- Site visits to review local EHS System implementation at eleven operating sites, selected to provide a representative sample based on size and complexity, geography, GE business-area and ISO 14001 and/or OHSAS 18001certification status.

## LRQA's Opinion

Based on LRQA's approach, it is our opinion that:

- The design of *the EHS System* was aligned with ISO 14001:2015 and OHSAS 18001:2007. No elements of the standards were identified which had not been addressed as documented requirements of *the EHS System*;
- At the sites sampled, an EHS Management System had been established based on requirements of *the GE EHS System;*
- Based on a review of records maintained on the enterprise-wide data management system, no evidence was identified to indicate sites were implementing EHS management systems other than those established through implementation of *the GE EHS System*; and
- Programs and initiatives linked to implementation of *the EHS System* were contributing to reported improvements in environmental, health and safety performance.

The opinion expressed is formed on the basis of a limited level of assurance. Consistent with this level of assurance, and the approach described above, the assurance is not intended to replace or otherwise be considered equivalent to ISO 14001 and/or OHSAS 18001 certification, as provided under established accreditation programs.

## LRQA's Recommendations

Observations, including areas for potential improvement, were provided in a report to GE's management. These observations do not affect the opinions expressed in this assurance statement.

**Notes**

(a) Due to negative net income in 2015 and 2017, this ratio is not indicative of our philanthropic contributions in those years.

(b) 2017 data as of March 2018

(c) Other Integrity Concerns includes AML (2014=11, 2015=4, 2016=4)

(d) 2016 Total Concerns Reported updated based on cases closed as of March 3, 2018

(e) 2016 Disciplinary Actions in response to closed matters through February 2018; actions correspond to year in which concern was reported, not necessarily year action was taken.

(f) Due to the changing nature of GE's enterprise business structure, figures are periodically updated to reflect changes in scope. For instance, acquired businesses may not have aligned data for the same time periods.

(g) Number of OSHA recordable injury and illness cases per risk population YTD, based on 100 employees working 200,000 hours annually.

(h) Days Away From Work Incident Rate uses the OSHA calculation for days-away-from-work cases (transfer or restricted cases are excluded), based on 100 employees working 200,000 hours annually.

(i) Excellence Certifications began tracking in 2016. 2015 data is not available.

(j) Values are reported as estimate company-wide totals based on a subset of reporting sites.

(k) For GHG, energy-related and water metrics, each year GE adjusts its 2011 baseline inventory to account for divestments and acquisitions. Interim years are not adjusted.

(l) GE reports Scope 3 emissions from the U.S. and international thermal power and offsets from U.S. renewable energy projects in which GE has an equity interest.

(m) Turks and Caicos Islands, Tuvalu, Svalbard and Jan Mayen Islands etc.

# Anticorruption

GE has long taken a leading role in pushing for transparency and integrity in the global marketplace. Our policy against improper payments in business transactions is a key element of our code of conduct—The Spirit & The Letter— and represents a core belief in how we do business.

GE's approach to compliance in this critical area is multifaceted. Among its key features are:

- Corporate policies and procedures that reflect the Company's approach by prohibiting improper payments in every transaction, whether with a government or with a private party
- Extensive controls, including thorough due diligence, careful screening and training on GE policies for third-party intermediaries such as distributors, service providers, and commercial agents and representatives
- Heightened attention to key risk areas such as gifts and entertainment, travel and living expenses, donations, and facilitating payments
- Prompt investigation and remediation of any concerns
- Extensive training of GE employees on improper payments
- Robust internal controls and accounting processes designed to detect and prevent violations of Company policy relating to improper payment risks and to ensure accurate books and records relating to transactions
- Increased emphasis and enhanced due diligence concerning improper risk associated with mergers, acquisitions and joint ventures
- Strategic use of Corporate Audit Staff to identify and assess potential improper payment

## The Importance of Strong Anticorruption Compliance

Greater attention is being paid to the effectiveness of corporate compliance programs in preventing improper payments. The Justice Department and the SEC have issued a resource guide on the US Foreign Corrupt Practices Act (FCPA) that endorses a strong compliance program. The UK Bribery Act and the US Sentencing Guidelines similarly highlight the need for a strong program. As part of the compliance program at GE, operating with a strong anti-corruption program is a critical component in how we do business.

*Updated February 2018*

*As part of the compliance program at GE, operating with a strong anti-corruption program is a critical component in how we do business.*

www.ge.com/sustainability

sustainability@ge.com

# Anticorruption

Never before have the risks been greater. Aggressive enforcement of the FCPA by the SEC and the US Department of Justice remains the norm. Enforcement is not limited to companies; individuals increasingly face prosecution and lengthy terms of imprisonment for breaking the law. Prosecutors continue to broaden their reach across the commercial sector, focusing on healthcare, energy, oil and gas, software, financial services and telecommunications, and across developing and emerging markets such as those in China, India, Russia, Mexico, Brazil, the Middle East, and Africa, where GE's presence is expanding rapidly.

These trends are not limited to the United States. Global enforcement of anticorruption laws is increasing, enforcement actions are increasingly coordinated and interconnected, and sometimes a single transaction can expose a company to prosecution in multiple jurisdictions. GE closely monitors these developments to ensure that our global compliance program and internal controls address these evolving risks and enforcement trends.  The Company is firmly committed to ethical behavior in all of our business practices.

# Ethical Supply Chain Program

Suppliers are critical partners in GE's value chain. As GE's businesses have globalized, so has our supply chain, including in locations where environment, health, safety, labor, human rights and other practices can be problematic. We expect our suppliers to obey the laws that require fair treatment of workers, a safe and healthy work environment, and environmental protection. Our Supplier Integrity Guide (SIG) governs all facets of our relationships with suppliers, and includes specific prohibitions against forced, prison, or indentured labor, and prohibitions against subjecting workers to any form of compulsion, coercion, or human trafficking. At GE, we drive better outcomes through our collaboration and partnership with suppliers and other stakeholders. Working together with governments, business partners and effective academic and non-governmental organizations, we can achieve more than any of us can alone.

## Program Overview

Our supply chain efforts are most effective when we prioritize based on risk and where our involvement can have the most impact. Suppliers are prioritized for detailed, on-site assessments depending upon the country in which they are located, their past performance and whether they are producing parts or components that will be incorporated into GE products. We also prioritize labor suppliers in situations where GE is working on behalf of a customer, either alone or as a consortium partner, in construction and commissioning work in parts of the world where acceptable labor standards may not align with GE's SIG. The on-site assessments cover environmental, health, safety, labor, human rights and security issues using a global protocol that reflects GE's Supplier Expectations. The assessments take place prior to placing initial orders with new suppliers, and periodically thereafter, on a one- to five -year time frame, depending on our experience with the supplier.

## Supplier Assessments

Almost all of our on-site assessments are conducted in developing countries, and use more than 1,000 local, trained GE employees or trained and qualified partners that can both inspect conditions and coach for improvement. All GE personnel who interact with supplier facilities, regardless of their role or expertise, are expected to participate in awareness training on GE's supplier expectations, human rights issues and on-site due diligence requirements. Sourcing personnel who visit supplier locations are required to take a hazard-recognition class, to have their "eyes always open" and to report any potentially problematic activity to our team of assessment professionals. GE records all assessment findings from on-site inspections in an automated assessment tracking tool. Each finding is monitored until the supplier provides evidence that the defect is corrected, and then it is closed. We also supplement onsite efforts with information from regional databases such as that

of the Institute of Public and Environmental Affairs' (IPE) China pollution maps, plus periodic spot checks and anonymous desk-side reviews of GE audit records by inspectors from other business units or from our EHS experts. Typically, findings must be closed within 60 days. Purchase orders are suspended if findings remain open beyond this time frame, unless GE agrees that a closure requires more time, interim progress has been demonstrated and/or the delay has been approved by the compliance team. Labor-related findings, such as the presence of child labor or forced labor, ordinarily result in immediate cessation of business relationships. GE puts a great deal of emphasis on confirming closure of findings, which we track in a Gensuite® software system. Closure requirements for findings are linked either to compliance with local laws or, for some issues, to higher GE expectations.

GEA33731 2/2018

# Supplier Initiatives

GE partners with suppliers, governments, business partners, and academic and non-governmental organizations to promote environmental, health and safety (EHS) standards and drive resource-initiatives within our supplier community.

For example, on August 8-9, 2017, GE successfully hosted the First China Green Supplier Management Conference with the National Center for International Cooperation in Work Safety (NCICS) of China's State Administration of Work Safety (SAWS) and AVIC Trust Co. LTD. Over 200 multinational companies and Chinese national and local agencies participated in the two-day summit to identify mechanisms to drive sustained EHS performance and reduced environmental footprint into supply chains in China. At this event, China's Ministry of Industry and Information Technology (MIIT) recognized GE's supply chain management practice as the foremost demonstration of supply chain management among applicants for a Chinese Green Supply Chain award.

The Green Supplier Initiative (GSI), launched in 2014 with Ernst & Young (EY) and the Lawrence Berkeley National Laboratory (LBNL), is aimed at advancing the Energy Performance Contracting (EPC) market by bringing energy service companies (ESCOs), suppliers and financiers together with industrial facilities to provide those facilities with integrated retrofit solutions. Through this partnership, industry and governments in China and the U.S. collaborate on opportunities to improve resource efficiency in supplier operations by leveraging the GE store, using GE technologies, analytics capabilities, and financing solutions to help China's government achieve its energy and environmental targets. The initiative also opens and expands markets that improve supplier business and environmental performance to enable corporations to realize their sustainability and growth goals simultaneously.

In one pilot with Yeong Guan Energy Technology Group, the GE-led team implemented an energy management system, efficient lighting, water savings, distributed rooftop solar power generation and digital MES solutions on Yeong Guan Energy Technology Group, Ltd's property. This pilot achieved, on average, 28% savings across affected systems, yielding a net reduction of 4,456 tons of coal equivalent in annual energy use. Yeong Guan Energy Technology Group's Vice Chairman, Andy Tsai commented, "China's government is taking steps to reform regulation and strengthen controls during this economic transition, and China's whole society recognizes the need to cut pollution, increase energy efficiency, and protect the environment. Thanks to GE for launching GSI in our company."

*Updated February 2018*

- *GE partnerships promote environmental, health and safety (EHS) standards and drive resource-initiatives within our supplier community.*
- *In 2017 GE was recognized with the "Star of Green Supply Chain" award.*

www.ge.com/sustainability

sustainability@ge.com

# Supplier Initiatives

In other partnerships with Jiangsu Huajiang Science and Technology Co., Ltd, and Liling Huaxin Insulator Technology Co., Ltd., the GSI team expects energy savings of 31.5% and 21.37%, respectively. So far, there has been a total investment of 7.16M USD, most from third-party financial investors, and 2.43M USD revenue for GE Digital and Current. When these pilot projects are completed, this model can be replicated with other suppliers both inside and outside of China.

At the 8th U.S.-China Energy Efficiency Forum (EEF), in Denver, Colorado, China's National Development and Reform Commission (NDRC) and the U.S. Department of Energy (DOE) recognized the project between General Electric and Liling Huaxin Insulator Technology Co., Ltd. This project is part of GE's Green Supplier Initiative (GSI), which aims to help suppliers reduce energy consumption through collaboration with leading technology companies, financiers, and energy service companies. This project is expected to save 21% of energy consumption, totaling 2,852 metric tons of coal equivalent (TCE) reduced per year. Read the press release from the U.S. Department of Energy here.

In early 2017, after a rigorous selection process involving over 70 candidates and spanning eight months, GE was recognized with the "Star of Green Supply Chain" award. The award was a feature of the 2016 Shanghai 100+ Enterprises in Green Supply Chain Program, launched jointly by China's Ministry of Environmental Protection (MEP) and the ASEAN Environmental Cooperation Center, Shanghai Environmental Protection Bureau, Shanghai Commission of Commerce, Shanghai Environmental Science & Technology Institute, Shanghai Foreign Investment Association, and U.S. Environmental Protection Agency.

Working with suppliers enables us to identify projects with both operational and environmental benefits while building stronger relationships and reducing our supply chain costs. Efforts like GSI as well as government partnerships provide compelling insights into the opportunities and challenges of engaging with our suppliers. Most importantly, given the size and complexity of GE's supply chain, these programs help us prioritize our actions and enable meaningful partnerships.

GEA33730 2/2018

# Statement of Principles on Conflict Minerals

*Updated February 2018*

GE condemns the ongoing conflict and resulting humanitarian harm in the Democratic Republic of the Congo (DRC), which is fueled, in part, by financing from trade in the ores from which tin, tantalum, tungsten and gold are derived. These four minerals are now known as "conflict minerals" — when they originate in mines operated or taxed by the warring factions, they can be referred to as "conflict minerals from conflict mines."

Tin, tantalum, tungsten and gold are common constituents of many of GE's products, ranging from light bulbs to aircraft engines. Because the minerals in these products typically enter supply chains many layers removed from manufacturers like GE, it is difficult to determine where the minerals originated and whether their extraction supports armed conflict. At the same time, millions of Congolese workers rely on mining of the minerals for their livelihood. Avoiding purchase of all conflict minerals from the DRC region would cause severe hardship for the workers and their dependents.

As part of our commitment to Principles on Human Rights, GE is committed to work to eliminate from our products all conflict minerals that support armed groups in the DRC or in the surrounding countries, while at the same time minimizing unintended consequences for legitimate miners and their dependents. GE will:

- Continue to work toward the elimination, over time, of all conflict minerals from conflict mines in our products, and endeavor to improve, year-over-year, our ability to track conflict minerals in our supply chain, report on their origin, and eliminate those that originate in conflict mines.
- Comply with the requirements of Section 1502 of the Dodd-Frank Wall Street Reform and Consumer Protection Act of 2010, which requires companies to inquire into the origin of tantalum, tin, tungsten and gold in their supply chains, and report on the reasonable inquiry or due diligence the companies conduct to determine whether purchases of tantalum, tin, tungsten and gold supported armed groups in the DRC.
- Support industry-wide initiatives to verify smelters and refiners that are conflict-free.
- Support initiatives to track conflict mineral ores from mines of origin in the DRC to smelters or refiners, so that conflict-free mining and transportation routes can be verified. This will allow responsible smelters and refiners to continue to source ores from legitimate mines in the DRC region and be certified as conflict-free, thereby minimizing the unintended consequence of encouraging a "Congo-free" policy.

*GE condemns the ongoing conflict and resulting humanitarian harm in the Democratic Republic of the Congo (DRC)*

*GE is committed to work to eliminate from our products all conflict minerals that support armed groups in the DRC*

# General Electric Company

# 2017 Conflict Minerals Report

## Introduction

General Electric Company ("GE" or the "Company") has prepared this Conflict Minerals Report ("Report") for the year ended December 31, 2017, as provided for in Rule 13p-1 of the Securities Exchange Act of 1934, as amended, and Form SD (collectively, the "Conflict Minerals Rule"). GE manufactures a wide range of products that contain tin, tantalum, tungsten or gold ("3TG") but GE does not purchase ore or unrefined 3TG from mines and generally is many steps removed in the supply chain from the mining of these minerals. We purchase materials from a wide network of suppliers and rely on them to assist with our reasonable country of origin inquiry regarding the 3TG that are necessary to the functionality or production of products we manufacture. After performing our reasonable country of origin inquiry and due diligence for 2017, we have determined that some of the 3TG contained in our products originated from a Covered Country, and we are therefore submitting this Report, which describes the due diligence we have performed pursuant to the Conflict Minerals Rule and our related processes and procedures.

This Report describes:

- the due diligence we performed for 2017, including the steps we took to mitigate the risk that 3TG in our products benefit armed groups;
- the products that we have reason to believe might contain 3TG originating from the Democratic Republic of the Congo or an adjoining country (collectively, the "Covered Countries"); and
- information about the processing facilities and countries of origin of 3TG used in those products.

## Due Diligence

### 1. Design of GE's due diligence measures

GE has adopted Conflict Minerals Guidelines (the "Guidelines") that lay out the design of our 3TG due diligence process. The Guidelines describe procedures that each GE business is expected to use to perform due diligence on the source and origin of 3TG contained in products we manufacture. GE management designed our due diligence measures to conform in material respects to the *OECD Due Diligence Guidance for Responsible Supply Chains of Minerals from Conflict-Affected and High-Risk Areas* including, the *Supplement on Tin, Tantalum, and Tungsten* and the *Supplement on Gold* (collectively, the "OECD Guidance").

### 2. Description of GE's due diligence measures for 2017

This description of due diligence measures refers to measures performed at the GE corporate level and by the following GE businesses: Power, Renewable Energy, Oil & Gas (prior to its combination with Baker Hughes

Incorporated ("BHI") in July 2017; for information regarding the legacy BHI business, please refer to the Form SD filing by Baker Hughes, a GE company ("BHGE")), Aviation, Healthcare, Transportation and Lighting.

This description is presented pursuant to the organizational structure of the Five-Step Framework for Risk-Based Due Diligence in the Mineral Supply Chain contained in the OECD Guidance.

## Step 1: Establish strong company management systems

### A. Adopt and commit to a supply chain policy for minerals originating from conflict-affected and high-risk areas

The Guidelines contain the operative provisions of GE's Statement on Conflict Minerals, which can be found on GE's website, as well as the process for ensuring that risks are adequately managed. GE Corporate created and disseminated the Guidelines to each GE business for execution of GE's 3TG due diligence process. Additional GE policies that relate to the due diligence measures contained in the OECD Guidance are incorporated into GE's policy document *The Spirit & The Letter*, which can be found on GE's website (for each of these materials, see "Where You Can Find Additional Information" below).

### B. Structure internal management systems to support supply chain due diligence

**GE Corporate**. GE's Global Law & Policy organization has oversight responsibility for GE's Statement on Conflict Minerals, including the establishment of processes and procedures to carry out this statement.

**GE businesses**. Each GE business has:

- established a system to support performance of due diligence on its supply chain;
- documented that system in a written business program; and
- assigned responsibility for the execution of the business program to specific personnel.

**Internal reporting**. For 2017, GE Corporate used the following 3TG due diligence reporting mechanisms:

- **Reporting within GE businesses**: Each GE business conducted one or more reviews of its 3TG due diligence program with senior management in its sourcing organization covering measurements relating to efforts to achieve supply chain transparency;
- **Communicating across GE businesses:** Representatives of GE businesses and others responsible for executing 3TG due diligence held regularly scheduled meetings to discuss design and modification of the due diligence process, share best practices among the businesses, and monitor progress of the due diligence process; and
- **Reporting to GE sourcing leaders:** Sourcing leaders at each GE business periodically receive reports and review the 3TG program.

### C. Establish a system of controls and transparency over the 3TG supply chain

**Identifying suppliers**. Each GE business identified:

- **Relevant Suppliers:** suppliers that provide inputs to GE products that are known or are likely to contain 3TG through a process that is based on an examination of internal records such as bills of material or other product specifications, a qualitative review of sourcing records, or information provided by the supplier; and

- **Significant Suppliers:** those suppliers within the universe of Relevant Suppliers that are most significant to GE's 3TG program, using criteria developed by the business, such as the amount of sourcing spend with the supplier.

**Identifying smelters and refiners in the supply chain**. Each GE business identified all smelters and refiners of 3TG that are first-tier suppliers to GE and used its best efforts to identify additional smelters and refiners by surveying Significant Suppliers, either directly or indirectly through an independent third-party supply chain expert, based on the Responsible Minerals Initiative's ("RMI") Conflict Minerals Reporting Template ("CMRT"). The survey tools are designed to collect, manage and archive (for at least five years) supplier information relevant for 3TG due diligence including, among other things, the identity of smelters and refiners of 3TG in the supplier's supply chain. We apply criteria based on the CMRT across GE businesses for assessing the acceptability of survey responses.

**Conducting a reasonable country of origin inquiry**. For upstream due diligence to identify countries of origin and other relevant information about the conflict status of metals produced by the smelters and refiners identified as potentially in GE's supply chain, GE relies on the information made available through the Responsible Minerals Assurance Process ("RMAP") administered by RMI, as well as information from an independent third-party supply chain expert. GE relied on this information to identify (1) the status of smelters and refiners potentially in GE's supply chain; and (2) the countries of origin of ores that are potentially in the supply chains of these smelters and refiners. Where the data showed that ores utilized by one or more of these smelters or refiners originated in one or more of the Covered Countries, GE concluded that there is reason to believe that 3TG from the Covered Countries may be present in the products of the business for which such smelters or refiners were reported as potentially in the supply chain. Due to business confidentiality and other competitive concerns, as recognized by the OECD Guidance, the RMI does not publish detailed information on specific mine and location of origin of ores that supply the smelters and refiners subject to verification reviews. Consequently, no such information is provided in this Report. RMI's efforts to determine such information is described on the RMI website (see "Where You Can Find Additional Information" below).

### D. Strengthen company engagement with suppliers

**Regular communications**. GE regularly communicates its expectations on responsible supply chains of 3TG by transmitting surveys and other communications from the sourcing organizations of the GE businesses to Significant Suppliers and other Relevant Suppliers. In addition, the sourcing organizations of GE's businesses make training available to their suppliers on GE's 3TG program.

**Contractual obligations**. Each GE business contractually obligates Relevant Suppliers to (1) adopt policies and establish systems to use best efforts to procure 3TG from sources that have been verified as conflict free; (2) provide supporting data on their 3TG supply chains to GE when requested; and (3) provide GE with audit rights and the right to terminate the contract in the event of material non-compliance. These obligations are reflected in GE's *Integrity Guide for Suppliers, Contractors and Consultants* ("Integrity Guide"), which can be found on GE's website (see "Where You Can Find Additional Information" below). Purchase order and contract terms and conditions in use by GE businesses require suppliers to conform their behavior to the Integrity Guide.

### E. Establish a company-level grievance mechanism

**Integrity Guide**. The Integrity Guide provides multiple methods for suppliers and supplier personnel to raise concerns about matters that are subject to the Integrity Guide, including GE's expectations of suppliers regarding 3TG.

**Open reporting system**. Each GE business also has an open reporting system through which employees and third parties may report concerns about policy violations, including concerns related to our 3TG policies. Concerns can be reported anonymously or for attribution through several channels, including any compliance resource (e.g. GE legal counsel or auditor), by calling the GE integrity helpline at (800) 227-5003, or by emailing the GE Ombudsman at ombudsperson@corporate.ge.com.

**No retaliation**. Both the Integrity Guide and the open reporting system forbid retaliation against any person reporting an integrity concern.

## Step 2: Identify and assess supply chain risks

### A. Use best efforts to identify the smelters and refiners in the supply chain

During 2017, using the processes described above under "Establish a system of controls and transparency over the 3TG supply chain," GE businesses identified 18,208 Relevant Suppliers (up from 7,289 in 2016), including 5,931 Significant Suppliers (up from 2,668 in 2016). These year-over-year increases are primarily the result of acquisitions and improvements in our due diligence efforts. Our Significant Suppliers identified 316 smelters and refiners of 3TG that were potentially in their supply chains (versus 318 in 2016). See Table A below for a list of these smelters and refiners and a summary of their validation status under the RMAP.

### B. Identify the scope of the risk assessment of the 3TG supply chain

**Engaging with suppliers**. GE's 3TG supplier survey asks suppliers to identify smelters or refiners of 3TG in their supply chains. We seek to engage all Significant Suppliers to encourage the smelters and refiners in their supply chains to become validated as conformant by the RMAP or a similar program.

**Engaging with smelters and refiners.** In addition to engaging with smelters and refiners through the RMAP, GE's businesses that buy tungsten-bearing products directly from tungsten smelters ("first-tier tungsten smelters") engaged these first-tier tungsten smelters to encourage them to participate in the smelter validation process of the RMAP. See "Devise and adopt a risk management plan" below for additional information on our engagement efforts.

### C. Assess whether the suppliers have carried out all elements of due diligence for responsible supply chains of 3TG from conflict-affected and high-risk areas

Each GE business conducts due diligence to determine the degree of its suppliers' compliance with the contractual obligations laid out in the Guidelines. Measures may include reviewing supplier responses for completeness, accuracy and credibility, confirming smelter status by checking against the Smelter Look-up tab list of the RMI's CMRT and the RMI's Conformant Smelter list.

### D. Where necessary, carry out joint spot checks at the mineral smelter or refiner's own facilities (including through participation in industry-driven programs)

**First-tier suppliers**. Each GE business is responsible for confirming that each of its first-tier suppliers that are smelters and refiners (if any):

- has a policy and procedures to eliminate sourcing of conflict-supporting 3TG;
- has been subject to an audit of the origin of their 3TG supplies conducted in accordance with OECD Guidance or has made a firm commitment to undergo such an audit as soon as it can be scheduled; and
- passes the audit as being conflict-free or, having failed the audit, has established and put into place a plan to correct process deficiencies.

**Lower-tier (upstream) suppliers**. In accordance with OECD Guidance, including its audit recommendations for downstream companies, GE implements upstream audits by participating in and cooperating with industry organizations. GE is a member of RMI (member code GECO) and has, periodically, supported RMI and RMAP through membership on various committees and working groups and providing financial assistance and in-kind assistance with RMAP smelter validation. As such, GE relied on the RMAP to conduct risk assessment at the upstream level. For each smelter identified in its supply chain at the first or lower tiers, each GE business assessed the information available from the RMAP and an independent third-party supply chain expert to determine

whether there were any "red flags" (as defined in OECD Guidance) and, if needed, develop a corrective action plan. We encourage removing any high-risk smelters from our supply chain.

### Step 3: Design and implement a strategy to respond to identified risks

#### A. Report findings to designated senior management

See "Structure internal management systems to support supply chain due diligence" above for a description of GE's 3TG due diligence internal reporting processes.

#### B. Devise and adopt a risk management plan

**Across GE.** Each GE business periodically compiles a report of 3TG risks identified in its supply chain for review by the GE business executive-level program owner to determine appropriate steps to take in mitigating any risks identified in the reports. In 2017, these steps focused on reducing risk by (1) engaging Significant Suppliers to encourage the smelters and refiners in their supply chains to become validated as conformant by the RMAP, and (2) encouraging Significant Suppliers who identified high-risk smelters and refiners to remove them from their supply chains. A high-risk smelter or refiner is one for which there are credible reports that such smelter or refiner sources materials in a manner that directly or indirectly finances armed conflict. For Significant Suppliers who identified high-risk smelters and suppliers, the relevant GE business sent such supplier a letter requesting: (1) that that supplier confirm whether these smelters are in fact in their supply chain, and if so, whether such materials are used in GE products, (2) that the supplier encourage these smelters to participate in the RMAP and (3) that if a smelter refuses to participate in the RMAP, such supplier should develop a plan to remove the smelter from its supply chain. In addition, in 2017, the Aerospace Industries Association, of which GE is a member, sent a letter to a number of smelters in the aerospace industry supply chain urging them to participate in the RMAP.

### Step 4: Carry out independent 3rd-party audit of smelters/refiners' due diligence practices

See "Where necessary, carry out joint spot checks at the mineral smelter or refiner's own facilities (including through participation in industry-driven programs)" above for a discussion of how GE conducted risk assessment at the upstream level.

### Step 5: Report annually on supply chain due diligence

We file this Report annually, and a copy of it is available at https://www.ge.com/sustainability/reports-hub.

## 3. Continuous improvement

**2017 progress**. For 2017, GE continued to focus on:

- **conducting due diligence and a reasonable country of origin inquiry** to improve the transparency in our 3TG supply chain; and

- **engaging with suppliers** to reduce 3TG supply chain risk, increasing the number of smelters and refiners in our supply chain that have been verified as conformant by 3% to 245 in 2017. As a result, more than 79% of the smelters and refiners identified by our Significant Suppliers have been verified as conformant (up from 35% in 2013, when we started our 3TG due diligence program).

**2018 actions to improve due diligence and supplier engagement**. GE intends to take the following steps in 2018 to improve due diligence and thereby mitigate the risk that 3TG contained in in-scope GE products may benefit armed groups:

- continue communication with suppliers and spread best practices learned during execution of the due diligence process in 2017 across the GE businesses to continue to work to improve the percentage of Significant Suppliers responding to GE's supply chain surveys and the quality of their responses;

- continue the identification of and communication with smelters and refiners in GE's supply chain, both directly and indirectly through GE's Significant Suppliers, in order to continue to increase the number of smelters and refiners that participate in the RMAP; and

- as new Significant Suppliers are added, work with these suppliers to help ensure that they understand our compliance requirements, the requirements of the Conflict Minerals Rule and the OECD Guidance.

# Information Known to GE about 3TG in GE products

GE manufactures a wide range of products that contain 3TG. For a description of the products manufactured by GE in 2017, see the products description for each of our industrial businesses—Power, Renewable Energy, Oil & Gas, Aviation, Healthcare, Transportation and Lighting – on pages 28–53 of our 2017 Annual Report on Form 10-K, which are incorporated into this Report by reference and which you can find at https://www.ge.com/investor-relations/events-reports.

GE purchases materials from a wide network of suppliers so we necessarily rely on them to assist with our reasonable country of origin inquiry. After performing a reasonable country of origin inquiry and due diligence for 2017, we have determined that although none of the 3TG sourced from our first-tier tungsten smelters originated from a Covered Country, some of the 3TG contained in our products did originate from a Covered Country. We are unaware and have no knowledge that any of the necessary 3TG contained in our in-scope products directly or indirectly financed or benefitted armed groups in a Covered Country, but make no assertion that any of our products are "DRC conflict free."

## Smelters and Refiners Used to Process 3TG in GE Products

GE obtained information about the smelters and refiners used to process 3TG in GE products through the due diligence activities described in this Report. Table A below contains a list of the first-tier tungsten smelters as well as smelters and refiners that GE's Significant Suppliers identified as potentially being present in their supply chains and that GE believes may have processed 3TG contained in in-scope GE products.

## Countries of Origin of 3TG in GE Products

GE obtained information about the country of origin and mine or location of origin of 3TG in GE products through reliance on the RMI's upstream audits of smelters and refiners in GE's supply chain and using information provided by an independent third-party supply chain expert, as described in this Report. Table B below contains a list of known countries of origin of 3TG used by smelters and refiners that GE suppliers identified as potentially being present in their supply chains.

# Table B
## (as of May 23, 2018)

| Gold | Tantalum | Tin | Tungsten |
|---|---|---|---|

## Acronyms Used in This Report

| | |
|---|---|
| 3TG | Tin, Tantalum, Tungsten or Gold |
| CMRT | Conflict Minerals Reporting Template |
| DRC | Democratic Republic of the Congo |
| OECD | Organization for Economic Cooperation and Development |
| RMAP | Responsible Minerals Assurance Process (formerly the Conflict-Free Smelter Program) |
| RMI | Responsible Minerals Initiative (formerly the Conflict-Free Sourcing Initiative) |
| SEC | U.S. Securities and Exchange Commission |

## Forward-Looking Statements

This Report contains "forward-looking statements" – that is, statements related to future events that by their nature address matters that are, to different degrees, uncertain. For details on the uncertainties that may cause our actual future results to be materially different than those expressed in our forward-looking statements, see http://www.ge.com/investor-relations/disclaimer-caution-concerning-forward-looking-statements as well as our annual reports on Form 10-K and quarterly reports on Form 10-Q. We do not undertake to update our forward-looking statements.

# Matching Gifts

*Updated February 2018*

In 1954, the GE Foundation created the concept of a corporate matching gift program to support employees in their personal philanthropy and charitable giving by providing a one-to-one (1:1) monetary match. Since then, many companies have started similar programs. Today, the GE Foundation's Matching Gifts Program continues to serve as an important element of the Foundation's portfolio, with gifts matched in 2017 totaling more than $36 million.

Visit the GE Foundation's Matching Gifts website—managed by CyberGrants, Inc.—to learn more.

## GE Participants

GE employees and US retirees:
Log in with your SSO ID and password to register gifts, view your activity, and search for eligible organizations.

Click here to log in.

## Non-Profit Participants

Charitable recipients: Log in to verify gifts and update your contact information.

Non-profit participants click here to log in.

UK charities click here to log in.

Global charities click here to log in.

### Attention GE Retirees (US)

If you need to create an online SSO ID and password, go to the GE Benefits website. On the Benefits login page, you will see a link for first-time users to set up an account. Once you have established your account, you can log in as described in the "GE Participants" section above.

The GE Foundation uses CyberGrants, Inc., to process matching gifts. Limited information is provided to CyberGrants to enable verification of your eligibility to participate in the program. For active employees: GE-provided SSO ID, name, GE business, work email and work location (city/state/country). For US retirees: GE-provided SSO ID, name, and location (city/state/country).

(total Employee and GE Foundation matching gifts since inception)

### Customer Support

# GE Foundation's Matching Gifts Program Guidelines

*Updated February 2018*

## Overview

In 1954, the GE Foundation created the concept of a corporate matching gift program to support employees in their personal philanthropy and charitable giving by providing a one-to-one (1:1) monetary match. Since then, many companies have started similar programs. Today, the GE Foundation's Matching Gifts Program continues to serve as an important element of the Foundation's portfolio.

## GE Participant Eligibility

**Eligible participants are limited to:**

1. Employees of GE or a majority-owned affiliate on the date(s) the gift was made and registered. A valid GE-issued SSO ID is required to register a gift for matching.

2. Retirees US who retired directly from GE on or before December 31, 2017. GE retiree status must be current on the date(s) the gift was made and registered. A valid GE-issued SSO ID is required to register a gift.
   **Note:** A surviving spouse of an eligible GE retiree may participate if he or she attained such on or before December 31, 2014. A valid GE-issued SSO ID is required to register a gift.

3. Current directors of GE and directors emeriti who retired on or before December 31, 2017.

## Charitable Organization Eligibility

**Eligible charitable organizations must be one of the following (excluding noted "Ineligible Recipient Organizations"):**

1. US Charitable Organizations that are:
   (a) Recognized by and registered with the United States I.R.S. as a 501(c)(3) charitable organization; or
   (b) Accredited Public PreK-12 Schools or School Districts in the US to which contributions are tax deductible under the Internal Revenue Code of the United States; or
   (c) Accredited Public or Non-Profit Colleges and Universities in the US to which contributions are tax deductible under the Internal Revenue Code of the United States.

2. Charitable organizations in countries outside the US that are:
   (a) Recognized by and registered with the United Kingdom Charity Commission as a charitable organization; or
   (b) Recognized by Charities Aid Foundation-America as a charitable organization

   **Note:** All organizations must be approved by the GE Foundation and must confirm compliance with program criteria in order to participate.

### Matching Gifts

Through the Matching Gifts Program, the GE Foundation provides one-to-one matching for personal, charitable donations made by GE employees.

- Eligible GE participants can match up to USD$5,000 each calendar year.
- After making the donation directly, GE donors then may register the gift at: www.gefoundation.com/matchinggifts.

www.ge.com/sustainability

sustainability@ge.com

# GE Foundation's Matching Gifts Program Guidelines

**Ineligible recipient organizations include,** but are not limited to, the following (please note that this list is representative of frequent questions and may be expanded or amended by the GE Foundation):

1. United Ways (such as United Way of Metropolitan Atlanta, United Way of King County, and so on) or GE employee-led charities (e.g. Good Neighbor Fund, Employee Community Fund, Community Service Fund, and so on). These are supported through a separate program.
2. Political organizations (partisan organizations or those supporting specific candidates or legislation).
3. Religious organizations (churches, synagogues, mosques and other houses of worship), or other organizations primarily promoting religious purposes. Other faith-based community service organizations or schools may be considered eligible if their programs:
   (a) are open to all individuals in the community regardless of religious belief;
   (b) serve a secular purpose, such as food pantry, homeless shelter, or education;
   (c) do not require participation in prayer, worship, or other religious activities as a condition of receiving service(s) offered; and
   (d) do not use the individual donation or resulting match for religious purposes.
4. Donor-advised funds, private foundations, personal trusts.
5. Organizations that do not comply with GE's non-discrimination policy (for example, organizations that discriminate on the basis of a person's race, color, religion, national or ethnic origin, sex (including pregnancy), sexual orientation, gender identity or expression, age, disability, veteran status or other characteristic(s) protected by law).
6. Organizations that do not comply with the USA Patriot Act (or other applicable anti-terrorism rules/laws).

## Gift Eligibility

**Annual Maximum**

Each eligible GE participant has an annual matching maximum of USD$5,000 (or equivalent) in each calendar year.

**Eligible Gifts**

Gifts eligible to be matched by the GE Foundation must meet the following requirements:

1. Gifts must be a tax-deductible, charitable contribution of USD$25 (or equivalent) or more.
2. Gifts must be current contributions made directly by the GE donor to the eligible organization from the GE donor's own assets. Donors may not register funds collected from others.
3. Gifts must be made/donated, not merely pledged. A matching gift cannot be used to satisfy a personal pledge (for instance, a pledge of $2,000 cannot be satisfied by $1,000 from the donor and $1,000 from the GE Foundation match).
4. Gifts may be made via cash, check, debit/credit card or stock. Gifts may also be made by current payment from an entity such as a personal foundation or donor advised fund if that entity has been funded solely by the eligible GE participant (note that gifts made to such an entity cannot be matched).
5. Gifts made within the calendar year must be registered by the donor by the following April 15. The recipient organization must confirm receipt of a gift within 12 months of the donor registering the gift.

**Ineligible Gifts**

The GE Foundation will not match the following:

1. Charitable contributions made as part of a United Way Giving Campaign and/or made via payroll deduction (annual Giving Campaigns are supported separately).
2. Charitable contributions for religious purposes or supporting religious activities, commitments, and/or programs (such as "Bishop's Appeal" or equivalent), service attendance/ collection basket, and so on.
3. Contributions, or portions thereof, that are required and/or are not considered charitable or tax-deductible (such as event registration, ticket purchases, admission fees/"pay to play," auction item value, and so on). Note that any non-deductible portion should be declared by the GE donor and/or the recipient charity during the registration and confirmation processes.
4. Contributions that directly or indirectly benefit the donor, his/her family, or other person designated by the donor such as:
   (a) Tuition or other student expenses (including books, services, fees, T&L for volunteer trips, and so on).
   (b) Individual, family or group membership fees/dues, including alumni dues and subscription fees.
   (c) Donations to a university/college athletic association that allows the donor to purchase tickets to a sporting event.
5. "Group gifts." Each GE donor must register his/her own contribution for matching (for example, donors cannot register donations from others and claim them as their own).
6. Charitable contributions supporting political purposes, influencing legislation, or electing candidates.
7. Bequests, insurance premiums, or contributions made through entities such as charitable remainder or lead trusts or charitable gift annuities.
8. Real estate, in-kind, or non-monetary contributions (such as services, materials, supplies, and so on).

# GE Foundation's Matching Gifts Program Guidelines

The GE Foundation reserves the right to examine and exclude organizations, gifts, and participants as it deems appropriate.

## Gift Matching Process

Note that the GE donor first should make the donation directly to charity. The Matching Gifts system is for registration and reporting only, not for making donations.

**Gift Registration**

Register your gift with the GE foundation as follows:

1. After first making your donation directly to the charity, go to the GE Foundation's Matching Gifts website (www.gefoundation.com/matchinggifts)
   (a) Each GE Donor may only register his or her personal donations (for instance, no "group registrations"). Registering donations made by or collected from others is prohibited.
   (b) Gifts made within the calendar year must be registered by the donor by the following April 15.
2. Click "GE Participants" to log in using your GE-issued SSO I.D. and password. You will need to select the appropriate recipient organization and enter details such as the amount, type, and date of your gift.
   **Note:** If your donation was made for a specific purpose (such as a particular program, department, project, and so on) you may indicate that when you register for matching. Please note, however, that the GE Foundation's matching payments are unrestricted. To inquire or ensure how the match is used, you may follow up directly with the charitable organization.

**Gift Confirmation**

The GE Foundation's gift confirmation process is as follows:

1. The recipient organization must log in and confirm receipt of a gift within 12 months of the donor registering the gift (the organization may take this step as soon as the gift is registered). Confirmation takes places within the Matching Gifts website. Note that the recipient organization also must confirm compliance with eligibility criteria and program guidelines.
2. Once confirmed by the organization and subsequently approved by the GE Foundation, a gift will be recorded as eligible and matched.

**Matching Payment Distribution**

The GE Foundation makes matching gift payments as follows:

1. Gift checks are sent directly to the recipient organization.
2. Payments are made on a quarterly basis unless otherwise noted (the schedule is available on the Matching Gifts website). For charities outside the US.: the match will be paid to the recipient charity through our administrative partner, Charities Aid Foundation (CAF) and therefore may take slightly longer. Also, because there is an additional cost, there is a minimum threshold: payments will be made once a charity has reached a cumulative total of $250 from all employee activity (if the cumulative payment to a charity is less than $250, the payment will be held until that amount is reached).

## Administrative Conditions

The GE Foundation's Matching Gifts Program is not part of the GE employee/retiree benefits program, but rather is offered as a public service by the GE Foundation, the charitable foundation established by GE. This program is not to be construed as creating a balance due from, or legal obligation by, the GE Foundation. If any matching activity is found at any time to have been generated by or for an ineligible person, donation, or organization, the GE Foundation reserves the right to request return of the funds. The GE Foundation determines all aspects of the program including participant, gift and recipient eligibility, and may amend or terminate the program at any time.

Questions may be directed to the Matching Gifts Customer Support Center at 1-800-305-0669 or by email to gesupport@cybergrants.com.

# GE Foundation's Matching Gifts FAQs

*Updated February 2018*

## What is the Matching Gift Program?

The GE Foundation provides a one-to-one (1:1) monetary match for personal, charitable donations made by GE employees. For example, if an employee donates $50 to a charity and it is approved for matching, the GE Foundation then provides that charity with an additional $50. The GE Foundation created the concept in 1954, and since then many companies have begun similar programs. In 2015 the Matching Gifts program expanded to include approved charitable organizations in approximately 75 countries, in addition to the United States and United Kingdom.

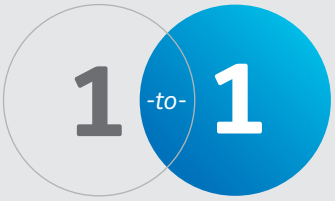
## How Does the Program Work?

**Step 1. Donation:**
GE employees first should make their donation directly to the charity. The Matching Gifts website is for matching registration only. It is not where the donation is made.

**Step 2. Registration:**
Once the donation is made, log into the Matching Gifts site at www.gefoundation.com/matchinggifts (in the "GE Participants" section, click to log in using your GE-assigned SSO ID and password). Once on the website, the charity search will default to the work country that is on record for you in the OracleHR system; however, if you gave to a charity in another country you can search for that as well. Once you find the charity, select it and enter your donation details (such as the date you donated, the amount donated, and so on). Then review and submit! You may only register donations that you personally made using your own funds.

**Step 3. Confirmation:**
Once you have registered for a match, the charity must confirm receipt of your donation before it will be eligible for matching (charities complete this step from the same Matching Gifts website). The GE Foundation periodically will contact charities with gifts to confirm as a courtesy, but employees also are encouraged to let the charity know about this requirement. It is better to over-communicate to ensure the best chance of success! Once charities are set up to log in, they can do so at any time and do not need to wait to hear from the GE Foundation.

**Step 4. Review and Payment:**
Once confirmed by the charity, the GE Foundation will review the gift and the charity for eligibility. If approved, the match should be included in the subsequent quarterly payment batch (payment dates are available on the Matching Gifts website for both donors and charities).



- The GE Foundation has been matching employee charitable gifts since 1954.
- Through the Matching Gifts program, the GE Foundation may provide one-to-one matches for eligible charitable donations made by GE employees.
- All GE employees are eligible. Donations can be registered at: www.gefoundation.com/matchinggifts.
- Charitable organizations outside the US are eligible to participate.

sustainability@ge.com

# GE Foundation's Matching Gifts FAQs

## Employee Guidelines

**WHO IS ELIGIBLE TO PARTICIPATE?**

All GE employees are eligible. In addition, the following are eligible:

1. Retirees (US) who retired directly from GE on or before December 31, 2017. GE retiree status must be current on the date(s) the gift was made and registered.
   a. A surviving spouse of an eligible GE retiree may participate if he or she has attained such status as of December 31, 2014.
2. Current directors of GE and directors emeriti who retired on or before December 31, 2017.

**Note**: A valid GE-issued ID is required to log in and register a gift for matching.

**CAN MY FRIENDS AND FAMILY PARTICIPATE?**

The Matching Gifts Program is for GE donors only. You may register donations you made personally using your own funds, but not funds collected from others. You may want to suggest that friends and family check with their own employer(s) to see if there is a similar program available to them. Other GE employees are welcome to register their own donations for matching as well.

**I AM A GE EMPLOYEE LOCATED OUTSIDE THE US; CAN I STILL PARTICIPATE?**

Yes, all GE employees can participate regardless of location. A valid GE-issued SSO ID is required to log in/register for matching.

## Donation Guidelines

**IS THERE A MINIMUM OR MAXIMUM DONATION AMOUNT?**

Yes, a donation must be a minimum of USD$25 (or equivalent). In addition, each eligible GE participant has an annual matching maximum of USD$5,000 (or equivalent) in each calendar year.

**CAN I COLLECT MONEY FROM OTHERS AND REGISTER IT FOR MATCHING?**

No, you may only register donations you personally made using your own funds. You may not collect money from others and register it as your own. Other GE employees are welcome to register their own donations for matching as well. For example, if you run in a race for a charity and have collected donations, you may only register your own donation for matching, not those collected from others.

**IS MY AUCTION PAYMENT, ATTENDANCE FEE, OR OTHER SIMILAR FEE ELIGIBLE?**

If your donation was required in order to participate or enter then it is not eligible. Also, if you made a donation and received something in return, the value of that item is not eligible. You will have the opportunity to declare the value when you register for matching. The charity will have the opportunity to do the same when it confirms receipt of your donation. Here are some examples:

- Auction: If you paid $500 for an item worth $300, only the difference ($200) is considered charitable and eligible for matching.
- College Athletics: If you donated $1,000 to your college or university for athletics and receive benefits (such as tickets) you must declare the value of the benefit or item when registering for matching, because that portion is not eligible.

Usually the tax receipt provided by the charitable organization will outline the difference for you. If you have any questions, please contact the charity or your tax advisor.

**ARE ALL CURRENCIES ELIGIBLE FOR MATCHING?**

Donations should be made directly to the charity using any currency accepted by the charity. When registering for a match to a non-US charity on the Matching Gifts website, you can indicate what currency was used, and the sytem will convert the amount to US dollars for matching purposes.

## Registration Guidelines

**HOW DO I REGISTER A DONATION FOR MATCHING?**

After making your donation directly to a charity, log in to the Matching Gifts website (www.gefoundation.com/matchinggifts). In the "GE Participants" section, click to log in using your GE-issued SSO ID and password. Once on the Matching Gifts site, search for your charity and then register the details. Remember you can only register what you personally gave (you may not include donations from others).

**IS THERE A DEADLINE TO REGISTER FOR MATCHING?**

Yes, donations made in a particular calendar year must be registered by April 15 of the following year.

## Charity Guidelines and Eligibility

**WHICH CHARITABLE ORGANIZATIONS ARE ELIGIBLE TO PARTICIPATE?**

There are many choices, including health and human service, civic and community, education, and more. You may review the guidelines at www.gefoundation.com/matchinggifts. In order to search the Matching Gifts system, you first must log in (click the "GE Participants" button). Once logged in, the search will default to the work country that is on record for you in the OracleHR system; however, if you gave to a charity in another country you can search for that as well.

**CAN I DONATE TO MY CHURCH, SCHOOL, ETC.?**

Houses of worship are not eligible, but some schools may be. Please refer to the guidelines for eligibility criteria (www.gefoundation.com/matchinggifts).

# GE Foundation's Matching Gifts FAQs

**HOW DO I KNOW IF MY CHARITY QUALIFIES?**

First, search for the charity in the Matching Gifts system; if there is a "select" link next to it, go ahead and register your donation for matching. Charities can be selected as long as they meet some basic tax status criteria. Please note, however, that all organizations and gifts are reviewed on an ongoing basis to determine compliance with guidelines and eligibility for matching. In other words, inclusion in the system is not necessarily a guarantee of eligibility. All organizations must confirm compliance with program criteria to access the Matching Gifts system and participate in the program.

**I HAVE HAD PREVIOUS DONATIONS MATCHED, BUT NOW THE ORGANIZATION ISN'T ELIGIBLE. HOW IS THAT POSSIBLE?**

Occasionally, an organization may lose its tax status eligibility due to a penalty, an oversight, or an error on the IRS electronic database (US) or Charity Commission database (UK). The nonprofit should contact the appropriate resource to inquire and resolve the situation. Please note that the GE Foundation also reviews each gift and charity prior to making a matching payment, so it's possible the charity is no longer compliant with the program guidelines.

## Charities – How To Search For A Charity In The System

**US Charities**

You must enter at least a partial organization name, as well as the state in which it is located (you also have the ability to perform an Advanced Search using Tax ID/EIN, and so on). If you are unable to find a particular charity, you may be entering too much information into the search engine or that the search is too specific (for example, if you are using an acronym, try searching using the full name). You are basically searching the full IRS database, so the most accurate way to search for a particular organization is to enter the US Tax ID. If you do not know the ID, contact the charity to get it or try searching the IRS website (http://www.irs.gov/Charities-&-Non-Profits/Exempt-Organizations-Select-Check). If the organization still does not appear in our system, it may not be listed on the IRS electronic database. You may call the IRS Call Center at (877) 829-5500 and request that it be added to and included in the next update of the electronic database.

**UK Charities**

You must enter at least a partial organization name to perform a search (you also have the ability to perform an Advanced Search if you would like to use the Charity Commission Number). If you are unable to find a particular charity, you may be entering too much information into the search engine or that the search is too specific (for example, if you are using an acronym, try searching using the full name). You are basically searching the full UK Charity Commission database, so the most accurate way to search for a particular organization is to enter the UK Charity Commission ID. If you do not know the ID, contact the charity to get it or try searching the UK Charity Commission website (http://www.charity-commission.gov.uk/). If the organization still does not appear in our system, it may not be listed. You may contact the Charity Commission and request that it be added to and included in the next update of the electronic database.

**ALL OTHER COUNTRIES – Charities outside the US or UK**

You must enter at least a partial organization name to perform a search (the search engine defaults to your work country on record in OracleHR, but if you donated to a charity in another country you can easily search for that as well). If you are unable to find a charity, it may not have been reviewed yet (it first must be reviewed by the GE Foundation's administrative partner, Charities Aid Foundation). If it is not yet listed, you may suggest that the charity contact CAF to start this process (see the following section for details).

## Adding/Suggesting A New Charity

**US Charities**

First search for the charity on the Matching Gifts site. When you log in you will see a search box on your home page (the site defaults to your work country on record, but if you donated to a charity in another country you can easily do that as well). Look for your charity in the search results. If you see a "select" link next to it, click that to begin registering your donation for matching. If you see "nominate" next to it, that means it meets basic IRS tax qualifications but has never participated in our program. Click the "nominate" link to fill out some brief information; once we add it to the program, you will be notified that it's ready for you to register your donation. This process usually takes just a few days, but we do ask the charity first to acknowledge it wishes to participate. Until it accepts, we cannot move ahead, so you may want to let it know to respond quickly to our email.

**UK Charities**

First search for the charity on the Matching Gifts site. After you log in you will see a search box on your home page (the site defaults to your work country on record, but if you donated to a charity in another country you can easily do that as well). Look for your charity in the search results. If you see "select" next to it, go ahead and register your donation for matching. If the organization does not appear in our system, it may not be listed with the Charity Commission (http://www.charity-commission.gov.uk/). You may contact the commission and request that it be added to and included in the next update of the electronic database.

# GE Foundation's Matching Gifts FAQs

**ALL OTHER COUNTRIES – Charities outside the US or UK**

First search for the charity on the Matching Gifts site. After you log in you will see a search box on your home page (the site defaults to your work country on record, but if you donated to a charity in another country you can easily do that as well). Charities outside the US are managed by our administrative partner, Charities Aid Foundation (CAF); if you don't see yours listed, you may suggest that the charity contact CAF directly to be reviewed. Simply refer it to the CAF site for details (www.cafamerica.org/services/foreign-charitable-organizations/). Please note that the charity may need to pay a fee to be reviewed. Once CAF reviews and approves the charity, it will soon after be available for selection on our Matching Gifts site. In addition, it will be eligible to receive donations from other US donors (individuals or corporations) who would like to make a tax-deductible donation to that charity through CAF. Please keep in mind that these charities will still need to comply with GE Foundation's guidelines, so inclusion in the list is not a guarantee of eligibility for our program.

## Matching Payments

**WHEN WILL THE CHARITY RECEIVE THE MATCHING PAYMENT?**

The charity first must confirm receipt of a donation on the GE Foundation's Matching Gifts system before it can be matched. Payments are made quarterly, so once the charity has confirmed the donation, the match should be included in the next quarterly payment batch (please note that all gifts and charities will be reviewed for compliance and eligibility prior to payment). The quarterly schedule is posted on the Matching Gifts website.

**HOW ARE MATCHING PAYMENTS MADE TO CHARITIES OUTSIDE THE US?**

The GE Foundation's match will be paid directly to the recipient charity through our administrative partner, Charities Aid Foundation (CAF). Payments are made on a quarterly basis (please note: because there is an additional cost to make payments outside the United States, there is a minimum threshold; payments will be made once a charity has reached a cumulative total of $250 from all employee activity).

## GE Single Sign-On (SSO) Questions

**WHAT IS SSO?**

GE issues Single Sign-On (SSO) IDs as part of a companywide security and navigation feature designed to allow users to securely sign on and move between GE websites. Every GE employee is given an SSO ID. This applies to US retirees as well.
Note to US retirees: The easiest way to register for an SSO account is to do so from the GE Benefits website. Once you have established your SSO ID and password, please go to the Matching Gifts page to log in using your newly established SSO ID and password.

**I HAVE AN SSO ID. WHY CAN'T I PARTICIPATE?**

Not everyone who has an SSO ID is eligible for the program. Please see the participant eligibility criteria for further details. If you are a new employee, it may be that your information has not yet been added to the eligible population (the update from Oracle HR runs at least twice a month).

**I AM HAVING TROUBLE WITH MY SSO ACCOUNT. CAN THE MATCHING GIFTS TEAM HELP ME?**

GE's SSO accounts are managed by the Company, so unfortunately the answer is no. The GE Foundation's Matching Gifts program simply uses SSO credentials for log-in just like any other GE site. For SSO account issues, employees should contact their local help desk or HR manager. US retirees may contact Pension Services. Once the account issue is resolved, you should have no trouble logging into the Matching Gifts site.

## Customer Support

For Matching Gifts customer support, email gesupport@cybergrants.com or call (800) 305-0669.

# Developing Health

*Updated February 2018*

## Developing Health: 2017 Highlights

The GE Foundation's signature programs, Developing Health Globally™ (DHG) and Developing Health U.S. (DH), aim to increase access to quality healthcare in underserved communities around the world. These programs are funded and managed by the GE Foundation in collaboration with national ministries of health, public and private health facilities, NGOs, and academia.

## Substance Use Disorder and the Opioid Crisis

In 2016, the GE Foundation announced a new $15 million commitment to community health in Boston and greater Massachusetts, to expand care in behavioral health and addiction medicine with a focus on the opioid crisis. The Developing Health initiatives in Massachusetts focus on expanding access to evidence based treatment through provider capacity building and reskilling, and on driving awareness and advocacy to combat the stigma associated with the disease of substance use disorder. Learn more here.

## Project Echo

Access to specialty health care in rural and medically underserved areas around the world is limited. Project ECHO is an innovative model that builds the capacity of and reskills primary care providers to treat more patients with chronic, complex conditions, exponentially expanding access to care. Through a $14 million, multi-year commitment, the GE Foundation as the largest funder of Project ECHO, is supporting global replication and scale of this innovation. By leveraging technology, primary care providers are linked with multi-disciplinary teams of specialists who share their expertise. As the primary care providers expand their knowledge and skills, they can begin to treat more patients. As a result of GE Foundation's support, project ECHO has grown to over 160 specialty hubs training community providers in 25 countries.

## Safe Surgery 2020

The GE Foundation is committed to leading a multi-sector effort to improve surgical capacity and training with its Safe Surgery 2020 initiative. Access to safe, affordable surgical and anesthetic care is a pressing issue in global health. There are currently 5 billion people across the world who lack access to the safe surgical care they need, 90% of whom are in low- and middle-income countries.

The initiative is a $25 million commitment over three years that focuses on transforming the accessibility, quality and safety of surgical care in low- and middle-income countries, leading to reductions in maternal and trauma-related mortality and to stronger health systems. Through this initiative, we are also scaling its skills training and social entrepreneurship programs such as surgical leadership training, biomedical

training and oxygen delivery under the Safe Surgery 2020 umbrella.

In 2016, Safe Surgery 2020 launched in Ethiopia and subsequently in Tanzania in 2017 in partnership with the Federal Ministry of Health (FMOH) as well as local partners from the Surgical Society, local teaching institutions and district hospitals. Our focus has been to help transform the health system to ensure that every individual – including mothers and children – is able to access the surgical care they need quickly, safely, and affordably.

You can learn more about the initiative and its impact at www.safesurgery2020.org.

# Disaster and Humanitarian Relief Highlights

*Updated February 2018*

General Electric's Disaster and Humanitarian Relief program responds to major global disasters and humanitarian crises, drawing on GE's people, technology and other resources to reduce suffering and hasten recovery. In 2017, financial contributions in this area totaled more than $2.4 million. Additionally, the GE Foundation's Matching Gifts program enabled employees to contribute to crisis relief efforts in their local communities, doubling their impact by matching their donations 1-to-1.

Some examples of our work in 2017 include:

- To help support Hurricane Harvey relief efforts in Texas and Louisiana, GE donated a total of $1 million, with GE Foundation contributing $500,000 to the American Red Cross and $250,000 each to Americares and the United Way of Houston.
- To help with the recovery efforts of the earthquake in Mexico, as well as Hurricanes Maria and Irma, GE Foundation made a $1.15 million contribution, with $500,000 to the American Red Cross and $650,000 to Americares.
- Beyond cash contributions, GE donated $100,000 of medical equipment to Americares to support their medical relief effort in Puerto Rico.
- GE Foundation also supported the American Red Cross with a $250,000 gift to provide relief to people who were displaced by the devastating wild fires in Northern California in October.

GE continues to collaborate with private-sector partners, government agencies and relevant NGOs to help prepare for future disasters and to work on the initiatives within the Global Health Security Agenda.

GE remains committed to preparing for and responding to future natural disasters and humanitarian crises, diligently maximizing the impact of our financial, technological and human resources.

**Financial contributions in 2017:** $2,400,000

*GE's contributions supported response, relief and recovery efforts for Hurricanes Harvey, Maria and Irma; Mexico City earthquake; and Northern California wildfires*

*GE donated **$100,000** in medical equipment to support Puerto Rico*

GEA33650 2/2018

# Education & Skills

*Updated March 2018*

For more than 100 years, the GE Foundation has actively supported efforts to create a high-quality education pipeline for all students. Through its signature education and skills initiatives – *Developing Futures™* and *Developing Skills™* – the GE Foundation seeks to empower all 14 to 24-year-old students to become globally productive citizens by providing access to learning experiences necessary for the workforce of tomorrow and addressing the anticipated global shortfall of 45 million workers in 2020[1].

In 2005, the GE Foundation launched its signature education initiative, *Developing Futures™*, a more than $247 million investment to support the equity and quality in K-12 public education in the U.S. Together with our partners, the GE Foundation was able to give more students a solid educational foundation for both college and career and the requisite skills to compete successfully in the global economy. *Developing Futures™* assisted educators in 43 states and six countries, saved districts over $20M, trained 110K teachers, reached over 2000 schools, impacted 1.3M students, and increased student achievement in every district. This district work was scaled regionally and state-wide.

Building upon the success of *Developing Futures™*, the GE Foundation launched its *Developing Skills™* platform in 2014. The program seeks to strengthen the economy by narrowing the gap between skills acquisition and the needs of a changing labor market where 65% of the jobs of tomorrow do not currently exist[2]. *Developing Skills™* will help equip individuals with the education, skills and training they need to become employable and meet the demands of a changing global marketplace. We are committed to building skills to meet critical needs and fill skills gaps domestically and globally.

*Developing Skills™* launched with a 2014 grant to Delgado Community College to bridge the education and employment gap in New Orleans and fill critical jobs in the New Orleans Sewage and Water Board.

In April 2016, the GE Foundation brought *Developing Skills™* to Boston, MA, launching *Brilliant Boston*, to create a Model of Excellence, by providing opportunities for students to become critical thinkers, innovators, creators, problem solvers and leaders while exploring careers and understanding the skills necessary for future jobs.

- *Through its signature education and skills initiatives* – Developing Futures™ *and* Developing Skills™ – *the GE Foundation seeks to empower all 14 to 24-year-old students*

[2] U.S. Department of Labor, 2013 report

# Education & Skills

*Brilliant Boston* is working to bridge the gap between education and industry, classroom and career, and the economy of the future and the skills of today. Through this effort, the GE Foundation has developed the GE Brilliant Career Lab (BCL) – the first-of-its-kind interactive experience and mobile lab that combines experiential learning with career-readiness planning in high-demand STEM fields. The mobile and virtual (www.brilliantcareerlab.org) BCLs are bringing students and real-world careers together. The BCL has engaged 12 Boston public high schools to date, reaching more than 3,000 students and more than 300 educators, with a schedule of engaging an additional nine schools in the remainder of the 2017-2018 school year.

In 2017, the GE Foundation teamed up with the National Basketball Association champion Boston Celtics to create a BCL for middle school students. The new state-of-the-art *Brilliant Career Play* mobile STEM Lab is designed to bring age-appropriate, hands-on STEM experiences to Boston and Massachusetts public middle school students. This collaborative community initiative focuses on enhancing access to STEM training to encourage young people to become more familiar with the field and better preparing them for innovative jobs in the future.

Also, in 2017 the GE Foundation joined forces with GE Power in Schenectady, NY to launch a GE Brilliant Career Lab for the city's public-school district. Both new BCLs based on the success of the GE Foundation Brilliant Career Lab for high school students.

The Education and Skills initiatives include partnerships with pilot schools and non-profits in Boston to create exemplary models at the middle, high school and community college level and is offering workplace learning experiences such as summer internships and job shadow days to Boston high school students.

Collectively, these efforts are preparing students with the skills to become the critical thinkers, problem solvers, and innovators of the future.

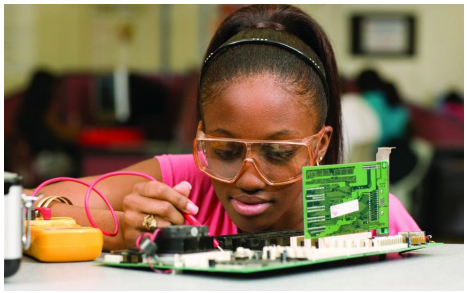
Finally, this comprehensive education initiative brings innovative training programs to middle school and high school students. In addition, it aims to arm teachers with the skills and support they need to empower and prepare students for innovative digital industrial jobs of the future.

To date, these efforts have reached more than 4,200 students and more than 1,125 educators with STEM-related experiences in Boston alone.

The GE Foundation is committed to unlocking endless possibilities for individuals and key industry sectors to make our world a better place.

*The Brilliant Career Play Lab, a mobile STEM lab for middle school students launched by the GE Foundation and Boston Celtics.*

*Photo credit: Boston Celtics*



*"The GE Brilliant Career Lab will prepare the students of Boston with the skills to become the critical thinkers, problem solvers, and innovators of the future."* – Boston student

*"The GE Foundation's professional development experiences have helped me to improve as a STEM teacher. I have left my comfort zone behind and I am experimenting with new ways to make STEM challenging and engaging. I was not aware of the many STEM careers available, but now I am helping my students see the connection between STEM and careers."* – a New York City educator

# GE Foundation

## Substance Use Disorder and the Opioid Crisis

As part of the $15M commitment to community health, GE Foundation has already invested in several initiatives, such as:

- Mass General Hospital and CAMTech: hosted an opioid hack-a-thon with more than 220 people to listen, learn and brainstorm new ideas. Three ideas have been accelerated - We Are Allies, GEMs Box, Mobile MAT (learn more).
- Partners Healthcare, Boston Medical Center and the MA League of Community Health Centers: launched the SUSTAIN initiative focused ($2.4M over two years) on expanding care in behavioral health and addiction medicine at community health centers to treat more patients, more effectively (learn more).
- Mass General: supporting an addiction medicine fellowship that will expand capacity and support additional training and mentorship at community health centers.
- National Medical Fellowships and the Kraft Center: focused on the next generation of primary care providers, supporting more women and diversity in the field of primary care (learn more).
- RIZE Massachusetts: private-sector effort to battle opioid addiction in the Commonwealth, to support innovative care designed across the care continuum from prevention to recovery (learn more).
- MA Attorney General, Maura Healy: providing substance use prevention education ($1.5M over two years) in MA middle schools to prevent tomorrow's adults from falling into the vicious cycle of the opioid crisis (learn more).
- Kraft Center, Mass General Hospital, Boston Health Care for the Homeless: launch of CareZONE, a hack-a-thon idea, to use a mobile health van to better engage individuals struggling with addiction and complex conditions with on-demand services (learn more).

*Updated February 2018*

- *GE Foundation committed $15M to the opioid crisis in Boston and greater Massachusetts*
- *GE Foundation initiatives focus on expanding treatment and increasing awareness about the disease of addiction.*

# GE Volunteers

*Updated January 2018*

GE Volunteers is a global network that includes GE employees, retirees, Affinity Groups, friends and family—"good people doing great things"—all supported by GE businesses. The mission of GE Volunteers is to facilitate and support volunteering activities that improve life and meet critical needs in the communities where GE people live and work around the world. These activities are carried out through a wide range of projects in the areas of health, education, the environment and community-building.

The GE family partners with external organizations to help solve some of today's biggest challenges in health, education, the environment and community-building. GE is also proud to encourage and support employee and retiree volunteerism throughout its global population. GE's focus on volunteerism dates back to 1981, and further evolved in 2005 when GE Volunteers was more strategically positioned to encourage broader participation and to support a more significant contribution to our communities.

GE Volunteer Councils are a driving force that keeps the spirit of volunteerism alive around the globe. We mobilize large groups of employees for the greater good for initiatives like Global Community Days—days when all employees in one region or area volunteer in their communities—and through Global Month of Service projects. Each of these projects has had a significant impact on the environment, education, community-building or health.

For ten consecutive years, GE has been recognized by Junior Achievement with the U.S. President's Volunteer Service Award.

## 2016 GE Volunteer Project Highlights

**Nature in the City**

Green spaces in major cities not only add beauty to a busy metropolis, they also provide a place for relaxation and even learning. Nature in the City is San Francisco's first organization dedicated to eco-literacy, restoration and stewardship of the city's wild places. On November 10, 2016, GE volunteers worked at one of Nature in the City's most important sites, the Adah's Stairwell. Volunteers completed a variety of restoration and environmental tasks such as removing invasive plants, planting, moving cobblestones and helping to make this a beautiful space for the community to enjoy.

*GE's focus on volunteerism dates back to 1981.*

www.ge.com/sustainability

sustainability@ge.com

# GE Volunteers

**Singapore – Bright Vision Hospital**
Bright Vision Hospital is a 317-bed community hospital with inpatient services for subacute, rehabilitative, palliative and long-term care patients. The hospital is a sanctuary for individuals, including low-income individuals, in need of healthcare services. Many elderly patients call the hospital their home for long periods of time but receive few visitors. On November 4, 2016, 30 GE volunteers visited with these elderly patients in a one-on-one capacity. Conversations were shared and fun games were played leaving all those involved feeling uplifted.

**Veterans Network Care Packages**
The GE Veterans Network not only strives to support those that have previously served in the military, but also support those that are still actively serving. For the 2016 Global Month of Service, six GE Veterans Network locations, led by Chris Tubesing, once again answered the call to support deployed servicemen and women. When deployed, soldiers are not only far from friends and family, they are also without many of the comforts of home including basic necessities. The Veterans Network assembled and shipped over 720 care packages that included a wide variety of items including toiletries, socks, snacks and notes of appreciation. One volunteer from Peebles, Ohio shared, "Although I love my country deeply, I never had the honor of serving America through military service. As a token of my appreciation for those men and women who have served, I do what I can to show them my respect and appreciation for their service to our great nation. I enjoy Freedom and Liberty because of our Troops and Veterans. Sending care packages is the least I can do for them in return."

**Nigeria – Waste Management Crisis Meets the Full Power of Employee Volunteerism**
On December 22, 2016, we shared the story of GE volunteers in Nigeria who helped combat the growing waste crisis in their country by teaching students in local secondary schools the value of recycling through a game called Recycle and Win. Working with an organization called Recycle Points, volunteers designed a recycling incentive program. The children earned points based on the number and type of recyclables they collected; the points could be redeemed for prizes ranging from basic school supplies to laptop computers. Read the full story.

**Catholic Charities of Boston**
As one of the largest providers of social services in Massachusetts, Catholic Charities of Boston offers nearly 90 programs and services in 27 locations around Eastern Massachusetts. From housing and food services to education and refugee programs, Catholic Charities' programs support over 200,000 people annually. In three shifts on November 16, 2016,GE volunteers packaged and distributed Thanksgiving meal baskets to 250 families in the community. The baskets were filled with everything needed to prepare the perfect Thanksgiving side dishes and even included gift cards for turkeys, so the families' Thanksgiving meals would be complete.

GE works on things that matter, and our volunteer work outlined here would not be possible without the commitment of our 295,000 global employees who come to work each day with a shared belief that things can be made better—it's a way of thinking about the work we do and the technology we make for our customers and partners, and for the communities in which we all work and live.

Together, we are working to make the world work better.

# Human Rights Statement of Principles

GE promotes respect for fundamental human rights and views them as a key component of responsible corporate citizenship. In addition to supporting the fundamental principles contained in the Universal Declaration of Human Rights, we have joined with other companies to find practical ways to apply its principles in the business community.

## Our Commitment

GE, as a business enterprise, promotes respect for fundamental human rights. We support the principles contained in the Universal Declaration of Human Rights, mindful that the Declaration is addressed primarily to nations. GE has joined with other companies to find practical ways of applying within the business community the broad principles established in the Declaration.

## Our Actions

GE endeavors to advance respect for fundamental human rights within the communities in which our businesses operate. We do this in important part by leading by example — influencing our employees and business partners through actions consistent with policies contained in *The Spirit & The Letter*.

**In Our Management Capacity**

- RESPECTING the human rights of our employees as established in the International Labour Organization's (ILO's) Declaration on Fundamental Principles and Rights at Work, including nondiscrimination, prohibitions against child and forced labor, freedom of association and the right to engage in collective bargaining

- PROVIDING security consistent with the intent of the Voluntary Principles on Security and Human Rights, as well as the laws of the countries in which we operate, retaining security services for preventive or defensive purposes with instructions to use force only when necessary and to an extent proportional to the threat

**In Our Business Capacity**

- DEVELOPING and offering products, including those that meet human needs for power, water and medical care, with due regard for fundamental human rights and a sustainable environment

*Updated February 2018*

*GE promotes respect for fundamental human rights and support the principles contained in the Universal Declaration of Human Rights.*

*GE endeavors to advance respect for fundamental human rights by leading by example in our business capacity, with our direct business partners, and in the communities where we operate.*

sustainability@ge.com

# Human Rights Statement (cont'd)

**With Our Direct Business Partners**

- INCORPORATING appropriate principles for The Spirit & The Letter into contracts with suppliers, business partners and distributors
- MONITORING adherence by key suppliers in emerging markets to environmental, health and safety standards; prohibitions against forced and child labor, human trafficking and local wage and hour laws
- EVALUATING human rights issues involving our direct business partners — particularly in emerging markets — and considering practical responses within the relevant context
- ADVANCING application of the ILO Declaration through engagement and collaboration

**In the Community**

- SERVING as a positive influence in communities in which we operate, demonstrating by our actions our belief that human rights violations are unacceptable
- ASSESSING, as appropriate, the impact on affected local communities of major infrastructure-project financing

GEA33648 02/2018

# UK Modern Slavery Act Statement 2018

*Updated June 2018*

*This Statement is made by General Electric Company ("GE" or the "Company") and pursuant to Section 54(1) of the Modern Slavery Act 2015 (the "Act") on behalf of its affiliates conducting business in the UK and covered by the Act.*

## Introduction

GE continues to support efforts to prevent, address, and work to eliminate the global epidemic of forced labor. Since the passage of the UK Modern Slavery Act, we have witnessed and participated in an increasingly sophisticated dialogue among states, companies, and NGOs over how forced labor occurs, where it is most prevalent, and how we can work together to address the problem. Shining a light on this issue has revealed both the challenges that we face in addressing the problem and the opportunities that working together can bring to address current incidents and prevent future victimization. As discussed below, over the past fiscal year we continued to apply our anti-forced labor policies and practices to our own operations and those of our suppliers, while at the same time focusing on improved awareness training, continued supply chain auditing, and participating in a worker voice pilot in one of our high-risk environments.

## Business & Supply Chain

GE underwent significant leadership changes in 2017, and in June 2018 the Company announced it will focus long-term on three key industries: aviation, power, and renewable energy. This new focus will result in some considerable disposition activity, especially in areas outside the three identified core businesses. But GE will remain a significant global infrastructure company, which currently employs approximately 313,000 employees globally, over half of whom work outside the US. A more detailed description of GE's business operations can be found in the annual report.

GE's supply chain continues to be large and diverse. We source more than $64B annually in raw materials and components that are incorporated into the products and services that GE sells. The largest categories of direct material purchases continue to be castings, forgings, electronics, plastics and machined parts. GE also buys products and services to support its business operations, which are used to develop or create, but are not incorporated into, GE's products or services. These indirect purchases amount to nearly $17B annually. GE sources from more than 180 countries.

**Since 2005,** GE has conducted more than 29,000 supplier assessments spanning 100 countries.

*GE is committed to taking steps to prevent acts of modern slavery and human trafficking in its business operations and supply chains.*

www.ge.com/sustainability

sustainability@ge.com

## Policies & Programs

The foundation of GE's human rights program is the GE Human Rights Statement of Principles in which GE commits to advance respect for fundamental human rights and expressly prohibits forced and child labor in both Company and partner operations. GE's integrity program, called The Spirit & The Letter ("S&L"), applies to all Company employees globally. GE commits in the S&L to "respect human rights everywhere we work and do business with others" and again explicitly prohibits forced and child labor. The Fair Employment Practices policy in the S&L lists the types of actions associated with the most common forms of modern slavery, including the charging of recruitment fees, the withholding of immigration documents, and the use of misleading recruitment tactics. Violations of this policy can result in disciplinary action, up to and including termination.

At the Corporate level, responsibility for GE's human rights strategy rests with its Global Counsel for Labor & Human Rights, in coordination with GE's Sustainability Steering Committee. But human rights compliance is also fundamentally imbedded throughout GE businesses and is a responsibility of all employees.

GE demands the same level of high integrity and respect for human rights from its suppliers as it does from its own employees. As a condition of doing business with GE, suppliers and their subcontractors (including labor providers) must adhere to the GE Integrity Guide for Suppliers, Contractors, Consortium Partners and Consultants. In addition to requiring compliance with all applicable local laws and regulations, the Guide expressly requires adherence to GE standards in areas including Fair Employment Practices, Environment, Health & Safety, and Human Rights. In the area of forced labor, the Guide expressly prohibits any form of compulsion, coercion or human trafficking; lists prohibited activities associated with trafficking, such as withholding passports, charging recruitment fees, and misleading recruitment; and imposes affirmative obligations on suppliers in certain circumstances such as reimbursement of return transportation costs and providing workers with written contracts in a language they understand. The Guide also encourages reports of violations of the policy through telephone, email and in-person channels by employees and third parties.

## Due Diligence

GE's policy commitments, including as relate to modern slavery, are translated into processes and practices that enable assessments of and responses to modern slavery risks. With respect to its internal business operations, GE's Compliance function—with over 400 employees globally—supports business leadership to create a compliance culture and implement GE's Integrity & Compliance program focused on prevention, detection and response. The 600+ employee GE Ombuds program receives and processes allegations of policy violations. In 2017, Ombuds received over 4,400 policy concerns (nearly 68% outside the US) leading to over 5,500 corrective actions.

The S&L expressly provides that GE employees have an obligation to promptly raise concerns when they "see a situation in which our integrity principles or policies are not being followed." Consistent with our Statement of Principles on Human Rights and in the spirit of "Eyes Always Open," employees are expected to report unfair employment practices and human rights concerns they observe when at GE sites or working with direct business partners.

As discussed below, one area of focus for the Company in 2017 was employee awareness training in this space.

GE maintains a multifaceted ethical supply chain program that has as its backbone an extensive global audit process which includes the use of ethical/compliance audits. Under this program, suppliers are prioritized for detailed pre-engagement, and periodic follow-up, onsite assessments according to country risks (including human trafficking risk), supplier past performance and other factors, such as media reports or supplier employee complaints. In 2017, GE assessed ~2,550 new or existing suppliers, generating more than 23,500 findings. GE suppliers are subject to an on-site reassessment on a one- to three-year schedule depending on their performance in prior assessments. About 61% of our total assessments in 2017 were re-assessments. Since 2005, GE has conducted more than 29,000 supplier assessments spanning 100 countries.

When on-site assessments are required, they are typically conducted by trained GE personnel using a global questionnaire and risk-weighted metrics. The questionnaire includes specific inquiries focused on forced labor and human trafficking, such as questions regarding the charging of fees or deductions from wages, withholding of passports or work documents, and the provision of return transportations costs for migrant workers brought in from outside the country.

GE records all assessment findings from on-site inspections in an automated assessment tracking tool and monitors each until the assessment finding is closed once a supplier provides evidence that relevant defects have been corrected. Typically, findings must be closed within 60 days[1]. Purchase orders are often suspended if findings remain open beyond this time frame, unless GE agrees that a closure requires more time,

[1] *As of January 30, 2018, 94% of the 2017 findings from approved suppliers were closed.*

interim progress has been demonstrated and/or the delay has been scrutinized and approved by the compliance team. Serious labor-related findings can result in immediate cessation of business relationships. GE publishes an annual overview of its supply chain audit results on its website.

In 2017, we took a number of new steps to improve its forced labor due diligence. First, GE worked with a vendor to develop a new prequalification program for all GE labor service providers – requiring them to provide upfront information on worker safety and human rights policies and programs as part of a mandatory pre-qualification assessment. The human rights portion of this new process focuses significantly on forced labor indicators, such as wage practices, recruitment efforts, and passport handling. The new program was rolled out in early 2018 and will provide GE with a way to both assess potential suppliers on their human rights programs and educate them as to the nature of forced labor and what is needed to prevent it.

Second, GE participated in a worker voice pilot in conjunction with Good World Solutions (now owned by Elevate). The pilot, which took place in a community that provides labor to nearby GE suppliers, centered around a survey administered via cell phone which asked questions regarding worker recruitment and treatment tailored to expose potential forced labor risk. GE sees worker voice as having significant potential in the area of supply chain management, providing opportunities for real-time feedback into worker treatment that could not only expose forced labor problems but also help assess risk throughout the Company's vast supply chain so as to better allocate audit resources and engage suppliers with potential issues.

Third, GE took a number of steps to mitigate forced labor risk at power project sites. Those included developing a new set of standards for contractors who provide workers accommodations to help insure that in such cases the contract workers are provided safe and decent living conditions based on international and industry standards; conducting forced labor training for project managers; engaging a third party consultant with expertise in the area of project recruitment to better understand the risk in the project space and best ways to mitigate it; and rolling out a new audit system called PIVOT that will empower GE compliance professionals with the knowledge and tools to audit GE operations at high risk sites.

Finally, GE engaged with the Responsible Business Alliance (formerly the Electronic Industry Citizenship Coalition or EICC) to benchmark against the organization's robust Verified Audit Program in an effort to look for areas in which the Company's internal program could be improved and also consider how GE could possibly leverage RBA's tools, experience, and audit program in its supply chain management system. The Company is currently preparing to participate in RBA pilot audits in Latin America as part of this best-practice sharing initiative.

## Training

One area that GE focused on in 2017 to improve its forced labor program was training and employee awareness. The Company created "fast training" learning modules on human rights and forced labor for all GE global employees – providing employees an easy, brief way to understand: the core principles of human rights, the Company's policies and programs, the causes and global footprint of forced labor, and most importantly how they can serve a role in identifying and reporting possible signs of modern slavery when they are at GE operations, supplier facilities, or customer sites.

The Company also conducted a number of live WebEx forced labor training sessions across the globe that were open to all employees, but which specifically targeted certain key departments including Compliance, Sourcing, Legal, Power EPC Projects, and Human Resources. The Company created an internal human rights "Yammer" page through which employees can receive updates, and participate in conversations, concerning human rights and forced labor subjects. GE also created and distributed to all employees an internal training video discussing a real wage-withholding scenario the Company confronted with its vendors and using that example to once again educate its workforce on issues that can lead to forced labor. This video, and an accompanying training package, was part of a "Human Rights Month" that was overseen by the Company's Compliance training team and highlighted various ways that employees could learn more about human rights and the risk of forced labor.

The Company's training focus was not limited to its own workforce. GE created a new supplier compliance video that included a module explaining GE's position on human rights, with a more in-depth focus on forced labor – what it is, how extensive the problem is globally, and what suppliers must do or avoid doing to comply with GE's forced labor policy. Suppliers are required to view the video as part of their commitment to abide by GE's Integrity Guide for Suppliers, Contractors, Consortium

Partners and Consultants.

## Facing the Global Challenge

GE continues to believe that collaboration is necessary to successfully fight the global scourge of modern slavery. In line with that belief, the GE Foundation has funded work by the Institute for Human Rights and Business ("IHRB") on the global problem of human trafficking—specifically, funding the IHRB's Responsible Recruitment initiative—and the UN Global Compact's Human Rights and Business Dilemmas Forum (GE is a member of the UN Global Compact). In addition, we continue to work closely with peer companies to address the systemic roots of modern slavery. GE is a founding member of the Global Business Initiative on Human Rights, whose mission is to advance human rights in a business context through cross-industry peer learning, outreach and capacity building, and informing policy.

GE is also a recent member of the *Leadership Group for Responsible Recruitment*, a collaboration between leading companies and expert organizations to drive positive change in the way that migrant workers are recruited, with a focus on eliminating fees being charged to workers to secure employment.

The three-fold aim of this initiative is to:

1. Create demand for responsible recruitment by raising awareness about the positive benefits of ethical practices and developing tools to help companies implement the Employer Pays Principle;
2. Increase the supply of ethically sourced labor by creating an enabling environment and supporting the development and implementation of systems to identify and use ethical recruitment agencies; and
3. advocate for improved protection for migrant workers by brokering dialogue to promote the effective regulation and enforcement of the recruitment industry.

Finally, last year GE joined the *Responsible Business Alliance* - one of the preeminent organizations focused on supply chain management – which recently launched its own *Responsible Labor Initiative*, a multi-industry, multi-stakeholder initiative focused on ensuring that the rights of workers vulnerable to forced labor in global supply chains are consistently respected and promoted.

## Conclusion

GE applauds the impact that the UK Modern Slavery Act has had on increasing dialogue around, and global awareness of, the epidemic of modern slavery. The UN Guiding Principles provide a constructive roadmap for the roles that States and Corporations have in working to protect and respect human rights, which includes trying to prevent vulnerable workers from becoming victims of modern slavery. GE is proud of the steps it has taken to date in this area, but knows that it must remain vigilant in its efforts to do its part in helping bring an end to this scourge.

# California Transparency in Supply Chains Act

GE requires its suppliers to adhere to the GE Integrity Guide for Suppliers, Contractors, Consortium Partners and Consultants (the Guide), which governs all facets of the Company's relationships with suppliers. The Guide requires suppliers to adhere to the same level of responsible business conduct in the areas of Environment, Health and Safety (EHS), Labor, and Human Rights that it requires of its own operations. In the specific area of forced labor, the Guide prohibits any form of forced, prison or indentured labor as well as the subjection of workers to any form of compulsion, coercion or human trafficking. GE's Supplier Expectations apply to all GE-consolidated GE affiliates. Implementation for new acquisitions is phased in within three years.

GE's supply chain is large and diverse. GE buys raw materials and components that are incorporated into the products and services that GE sells (direct materials). The largest categories of direct materials purchased are castings, forgings, electronics, plastics and machined parts. GE also buys products and services to support its business operations, which are used to develop or create, but are not incorporated into, GE's products or services. These indirect purchases range from logistical support, tools and supplies to IT, telecom and professional services. GE sources from approximately 150 countries.

Below we respond to the five areas listed under the California Transparency in Supply Chains Act.

## Verification

GE's Supply Chain monitoring program is multifaceted and risk-based. Suppliers are prioritized for detailed pre-engagement and subsequent periodic on-site assessments based on country risks, the supplier's past performance and other factors, such as whether GE has become aware of any reason to believe that the supplier is not living up to our expectations. Almost all on-site assessments are conducted in developing countries, as part of our overall supplier-management strategy, but we maintain an "eyes always open" policy to be alert to potential violations of our standards in interactions with our suppliers.

## Audits

When on-site audits are required by the GE Supplier Responsibility program, they are conducted by GE personnel using a global questionnaire and risk-weighted metrics. GE uses a combination of specially trained internal auditors, sourcing personnel, and a limited number of third-party firms specially instructed in GE standards to perform

*Updated February 2018*

**GE has trained more than 900 GE team members**
to execute the audits that support GE's Supplier Responsibility initiative.

*All suppliers must agree to comply with the GE Integrity Guide for Suppliers, Contractors, Consortium Partners and Consultants, which incorporates GE's Supplier Expectations, as part of our contracting process.*

www.ge.com/sustainability
sustainability@ge.com

verification and auditing procedures. Audits are repeated on a one- to three-year basis, depending on factors that include results of past audits. Audits are supplemented by periodic spot checks and anonymous desk-side reviews of GE audit records by inspectors from other business units or from our corporate EHS team. While audits are not unannounced, they are supplemented by "eyes always open" reviews when suppliers' facilities are visited by GE sourcing personnel.

## Certification

Virtually all suppliers (including labor providers) must agree to comply with the GE Integrity Guide for Suppliers, Contractors, Consortium Partners and Consultants (the Guide) ,which incorporates GE's Supplier Expectations, as part of our contracting process. The Guide has specific prohibitions against forced, prison or indentured labor as well as against subjecting workers to any form of compulsion, coercion or human trafficking, and requires our suppliers to hold their own suppliers to equivalent standards.

In 2016, the Guide was amended to be much more specific about the prohibitions that are indicators of human trafficking and it specifically prohibits activities associated with trafficking, such as withholding passports, charging recruitment fees and misleading recruitment; and imposes certain affirmative obligations on suppliers such as reimbursement of return transportation costs and providing workers with written contracts in a language they understand. The Guide encourages reports of violations of the policy through telephone, email and in-person channels.

## Accountability

GE records all assessment findings from on-site inspections in an automated assessment tracking tool and monitors each until the assessment finding is closed, once a supplier provides evidence that the defect has been corrected. Typically, findings must be closed within 60 days.[1] Purchase orders are suspended if findings remain open beyond this time frame, unless GE agrees that a closure requires more time, that interim progress has been demonstrated, and/or that the delay has been approved by the compliance team. Serious labor-related findings, such as evidence of child labor or forced labor, can result in immediate cessation of business relationships.

## Training

GE has specially trained more than 900 GE team members to execute the audits that support GE's Supplier Responsibility initiative. More than 3,600 GE employees who interact with suppliers have undergone GE's training in Supplier Expectations, human rights issues and on-site due-diligence requirements.

[1] For example, as of February 20, 2017, 95% of the 2016 findings from approved suppliers were closed.

GEA33646 02/2018

# Human Rights

*Updated October 2018*

As a diversified, global company with growth in emerging markets, and as a provider of infrastructure around the world, GE regularly confronts complex human rights challenges. Our approach to those challenges starts with the Company's Statement of Principles on Human Rights, which outlines our commitment to respecting human rights wherever we operate and to demanding the same commitment from our business partners. To embed this commitment within our business operations, we have developed human rights "implementing procedures" that help our businesses incorporate human rights considerations in all aspects of their operations.

With the adoption by the UN Human Rights Commission of the UN Guiding Principles on Human Rights and Business in 2012, there was for the first time a broad agreement on a human rights framework: the states' duty to protect, businesses' duty to respect, and the mutual duty to address human rights deprivations. Despite this agreed-upon framework, pressure continues for increased "hard law" in this space, from legislation mandating specific due-diligence measures and regulations requiring transparency and reporting to broad national action plans and even suggestions of a global treaty on human rights. We believe the Guiding Principles provide the fairest and most realistic framework for protecting human rights globally, but we recognize that for the Principles to succeed, business entities like GE need to "know and show" that they have robust programs for fulfilling their responsibility to respect human rights.

GE's human rights efforts include working to prevent forced labor through its Ethical Supply Chain program; collaborating with organizations and governments to improve human rights where it operates (see more here on Partnerships & Initiatives); and using its training, and employment opportunities to provide opportunities to those in challenging environments, see Women in the Middle East here and Myanmar here. States must be expected and required to uphold their duty to protect the human rights of those who live and work within their borders. While companies cannot be expected to assume the countries' duty to protect, we can continue to take steps to respect human rights across the globe both as a means to improve local communities and to be an example for others.

*GE promotes respect for fundamental human rights.*

*We demand the same respect for human rights from our business partners.*

GEA18001 10/2018

# Modern Slavery

*Updated October 2018*

Modern slavery, and the associated trafficking of its victims, is currently one of the most challenging human rights issues both in the U.S. and abroad. Forced labor occurs when individuals work involuntarily as a result of one or more coercive measures such as debt bondage, restriction of movement, threat of harm, fraudulent recruitment, and financial inability to return home. On any given day, it is estimated that over 20 million individuals globally, the majority female, are victims of this epidemic.

There are numerous NGO, UN, and state responses to this problem, many of which call on companies to conduct appropriate due diligence in their supply chains to prevent the use of forced or child labor. One of the most recent regulatory directives—the U.K. Modern Slavery Act (MSA)—requires companies operating in the U.K. to publish a statement outlining their efforts to prevent forced labor in their operations and supply chains. GE published its first MSA statement in May 2017, providing a detailed description of our approach to this important challenge. Please see our recent 2018 MSA statement here. Similarly, you can see our current California Transparency in Supply Chain Act disclosure here.

GE's efforts to combat forced labor start with strong policies prohibiting activities associated with this scourge, including the charging of recruitment fees, the withholding of passports, and failing to pay wages earned as a means to prevent job movement. These policies apply to GE's own operations as well as those of its business partners. With respect to its vast global supply chain, GE conducts thousands of on-site, in-person audits a year of suppliers in high risk countries to verify that their operations comply with our human rights policies. These suppliers are subject to further on-site reassessments every one to three years depending on their prior audit performance and other risk factors. Any findings from these audits are required to be remedied and closed expeditiously, typically within 60 days, see Ethical Supply Chain here. GE believes that in most cases it is better to work with a supplier to correct a human rights issue and improve their workplace going forward than to simply walk away from a supplier if any finding is uncovered. Ultimately, companies need to help build a more compliant global supply chain that is well educated in, and compliant with, basic human rights.

*GE has strong policies prohibiting forced or child labor in its operations and in those of its suppliers.*

*GE conducts thousands of human rights audits of its suppliers in high risk countries annually.*

*In 2017 GE joined the Leadership Group for Responsible Recruitment to help end the charging of recruitment fees.*

www.ge.com/sustainability

sustainability@ge.com

# Modern Slavery (Cont'd)

GE continuously looks to improve on its due diligence in this space. Recently, the Company developed a new pre-qualification program for its contract labor providers – requiring them to provide upfront information on worker safety and human rights before being approved to do work for GE. Also, the Company recently participated in a worker voice pilot in India where workers in communities that provide labor to local GE suppliers were provided opportunities to answer a survey regarding their recruitment and treatment via their smartphones. The responses allow GE to better pinpoint potential forced labor risk and educate its suppliers on issues being raised in their labor markets. Finally, GE published new worker accommodation standards for its contractors when they provide on-site housing for workers on GE projects. These and other examples of due diligence continuous improvement are discussed further in GE's UK MSA Statement here.

© 2018 General Electric Company – All rights reserved.

GEA18003 10/2018

# Partnerships & Initiatives

*Updated February 2018*

Collaborating with expert stakeholders locally and globally is integral to our human rights program. For instance, the GE Foundation has funded work by the Institute for Human Rights and Business on the global problem of human trafficking—specifically, funding the IHRB's Responsible Recruitment initiative—and the UN Global Compact's Human Rights and Business Dilemmas Forum.

GE is a founding member of the Global Business Initiative on Human Rights, whose mission is to advance human rights in a business context through cross-industry peer learning, outreach and capacity building, and informing policy. GE is also a member of the Leadership Group for Responsible Recruitment, a collaboration between leading companies and expert organizations to drive positive change in the way that migrant workers are recruited, with a focus on eliminating fees being charged to workers to secure employment. The three-fold aim of this initiative is to: (1) create demand for responsible recruitment by raising awareness about the positive benefits of ethical practices and developing tools to help companies implement the Employer Pays Principle; (2) increase the supply of ethically sourced labor by creating an enabling environment and supporting the development and implementation of systems to identify and use ethical recruitment agencies; and (3) advocate for improved protection for migrant workers by brokering dialogue to promote the effective regulation and enforcement of the recruitment industry.

In 2017, GE collaborated with Good World Solutions, now part of Elevate, to participate in a smartphone-enabled worker voice pilot in India sponsored in part by Humanity United. The purpose of the pilot was to survey residents in towns where GE suppliers recruit workers to gauge whether they were experiencing any forced labor conditions in their recruitment or employment. GE is looking at this and other ways to enhance worker voice in our supply chain to provide the Company with another way beyond audits to identify and correct worker welfare issues.

*GE Foundation collaborates with Institute for Human Rights and Business and the UN Global Compact.*

*GE is a founding member of the Global Business Initiative on Human Rights.*

*In 2017 GE joined the Leadership Group for Responsible Recruitment.*

GEA18005 10/2018

# Women in the Middle East

*Updated April 21, 2017*

It's no secret the Middle East is a challenging place for working women. The Arab world is home to eight of 10 countries with the lowest percentage of female workers across the globe, and only 3.5% of Arab women have their own businesses—about one-fourth the rate internationally.

GE is working to change that. We believe women in the Middle East are a highly educated, energized and untapped talent source, especially in countries like Saudi Arabia, where they make up more than half (55%) of the nation's university graduates, yet comprise just 16% of the Saudi workforce.

GE is dedicated to promoting diversity in the workplace, and 30% of GE's leadership team in the Middle East, North Africa and Turkey are women. Here's what else we're doing to promote female leadership:

- In 2013, GE (with Tata Consultancy Services and Saudi Aramco) launched Saudi Arabia's first all-female business processing center. Established in Riyadh, the country's capital and financial hub, this pioneering center opened with 300 female hires. By 2016, that number had expanded to 1,000 — and is growing. The Center supports GE Global Operations in delivering over 20 vital business operations, including Finance and Accounting, Human Resource Outsourcing, Supply Chain Management, Information Technology and Enterprise Data Management, in more than 50 GE locations world-wide.

- In January 2016, GE and Masdar opened the "Women in Innovation" leadership-training program at the GE Ecomagination Innovation Center in Masdar City. The training will focus on nurturing the skills that will help UAE women pursue careers and entrepreneurial opportunities in the renewable energy sector, which may create 24.4 million jobs by 2030.

- GE promotes diversity in the Middle East and globally through the Women's Network; 70,000 member group dedicated to enhancing women's professional growth industry-wide. Engagement initiatives include STEM day camps for junior high school girls and scholarships for female undergraduate students in fields like engineering, tech and finance.

- In accordance with GE's code of ethics, The Spirit & The Letter requirements, we will work tirelessly to create more opportunities for women all over the world. Learn more about our Diversity efforts here.

*30% of GE's leadership team in the Middle East, North Africa and Turkey are women.*

*GE recognizes that women in the Middle East are a highly educated, energized and untapped talent resource.*

GEA18002 10/2018

# Myanmar

*Updated March 2016*

GE re-entered Myanmar in 2013 and opened an office in Yangon in 2014. We have been principally engaged in product sales and leasing in healthcare, electricity and aviation. In addition to our commitment to improving Myanmar's infrastructure, improving healthcare and easing the country's crippling energy shortage, GE has engaged in significant philanthropic and capacity-building activities. The GE Foundation has undertaken an initiative in conjunction with Myanmar's Ministry of Health and Jhpiego, an affiliate of Johns Hopkins University, to supply training, technology and equipment to help reduce maternal and infant mortality rates. As of September 30, 2015, GE had delivered more than $500,000 in equipment and the GE Foundation had funded more than $2.5 million in healthcare training.

GE also developed, at the government's request, a comprehensive electricity plan to evaluate how to best address the country's needs, as well as a series of energy technical-training programs. Finally, we launched a series of leadership training programs for Myanmar government officials, both in the U.S. and in Singapore. As of March 2016, nearly 100 officials had completed the training.

GE recently has been awarded contracts for energy upgrades and installations that will help ease the crippling energy shortage suffered by the citizens of Myanmar. We have also leased aircraft to Myanmar Airlines and sold healthcare equipment to hospitals and clinics around the country.

While GE Oil & Gas has had very limited involvement in Myanmar to date, the GE Foundation commissioned a human rights impact assessment to guide the Company's future interaction with Myanmar's extractive sector. The assessment, which was prepared by the Institute on Human Rights and Business, applies the UN Guiding Principles to facilitate sustainable engagement with business partners and civil society in Myanmar. The report was issued in July 2014, and we have made it public to highlight for all in the oil and gas sector the human rights issues that attend extractive industry operations in Myanmar. It is available at Myanmar Oil & Gas Sector Wide Impact Assessment.

*GE is commitmted to improving Myanmar's infrastructure, improving healthcare and easing the country's crippling energy shortage.*

*GE has engaged in significant philanthropic and capacity-building activities.*

GEA18004 10/2018

# United Nations Global Compact

WE SUPPORT UN GLOBAL COMPACT

*Updated February 2018*

The United Nations Global Compact (UNGC) is both a policy platform and a practical framework for companies that are committed to sustainability and responsible business practices.

As a multi-stakeholder leadership initiative, it seeks to align business operations and strategies with 10 principles in the areas of human rights, labor,

environment and anti-corruption, and to catalyze actions in support of broader

UN goals.

*GE has been a UNGC signatory since 2008.*

GE became a signatory to the UNGC in 2008. Business signatories to the UNGC are required to annually submit a Communication On Progress (COP) for the UNGC website and to share the COP widely with their stakeholders. GE's COP can be viewed here. Also, referenced below are links to relevant portions of GE's Sustainability website that support the corresponding UNGC principles.

**HUMAN RIGHTS**

**Principle 1**

Businesses should support and respect the protection of internationally proclaimed human rights.

- Human Rights & Supply Chain

**Principle 2**

Businesses should make sure that they are not complicit in human rights abuses.

- Human Rights & Supply Chain

**LABOUR**

**Principle 3**

Businesses should uphold the freedom of association and the effective recognition of the right to collective bargaining.

- Labor Relations

**Principle 4**

Businesses should support the elimination of all forms of forced and compulsory labour.

- Human Rights & Supply Chain

www.ge.com/sustainability

sustainability@ge.com

# United Nations Global Compact

**Principle 5**
Businesses should support the effective abolition of child labour.
• Human Rights Statement of Principles
• UK Modern Slavery Act

**Principle 6**
Businesses should support the elimination of discrimination in respect of emplyment and occupation.
• Diversity & Inclusion

**LABOUR**
**Principle 7**
Businesses should support a precautionary approach to environmental challenges.
• Environment, Health & Safety

**Principle 8**
Businesses should undertake initiatives to promote greater environmental responsibility.
• Environment, Health & Safety

**Principle 9**
Businesses should encourage the development and diffusion of environmentally friendly technologies.
• Sustainability

**ANTI-CORRUPTION**
**Prinicple 10**
Businesses should work against corruption in all its forms, including extortion and bribery.
• Integrity
• Sustainability

# Public Policy Priorities

*Updated February 2018*

- ✓ Tax reform and competitive economic policy
- ✓ Regulatory reform associated with energy, infrastructure, healthcare and digital policy
- ✓ Effective and modernized defense procurement
- ✓ Effective laws and regulations governing the transfer and protection of data
- ✓ Trade policy
- ✓ Global energy and environmental policies
- ✓ Government procurement
- ✓ Intellectual property protection
- ✓ Promotion of exports and the free flow of goods
- ✓ Rule of law, globally
- ✓ Policies that facilitate the movement of people consistent with business needs
- ✓ Policies to promote effective economic development in less-developed countries

# Setting Public Policy Priorities

As one of the world's largest companies, and one active in many sectors of the global economy, GE engages in public policy discussions that impact our Company, our workers, and our communities. We approach public policy through education, engagement, involvement, and thought leadership. We seek to inform discussions by promoting thoughtful civil discourse grounded in strong, reasoned analysis. And we work in partnership with governments, because we believe that tackling the world's biggest problems will be possible only if governments and industry work together as partners. Each year, GE evaluates public policy priorities for the upcoming year. Our team reviews a number of factors, including the potential reputational effects and risks associated with pursuing or not pursuing a particular priority.

## Working Globally, Nationally, and Locally

GE works to promote public policy issues in areas such as energy, healthcare, international trade and investment, tax, data governance, rule of law, and government procurement. We continue to be committed to engaging with governments—globally, nationally, and locally—through constructive dialogue, the promotion of innovative public policy ideas, the formation of novel public-private partnerships, and investments in solutions that can help address the fundamental challenges that confront societies. Globally, we support public policies that promote open markets, technology, and innovation.

Societies with predictable and transparent legal institutions and processes engender confidence, investment, and growth. GE works actively to support stronger rule of law around the world. Key focus areas include anticorruption; legal and administrative transparency and predictability; independent judiciaries; transparency and competitiveness in public procurement; and fair and effective dispute resolution. GE, our employees, and the GE Foundation have supported numerous programs to achieve these goals.

## Assessing Policy Priorities, Defining Objectives

GE's Board of Directors believes that it is in the best interest of GE's stakeholders that we promote sound public policies at the international, national, and local levels. To that end, our Government Affairs & Policy team asks the Company's business teams to provide a semiannual assessment of their legislative and regulatory priorities. Similarly, we conduct surveys of issues and priorities across GE's regions worldwide. Each business provides a description of its public policy priorities, ties these to a GE objective, and provides input on the significance of the respective issue(s) to the Company.

*Updated February 2018*

*GE engages in public policy discussions that impact our Company, our workers, and our communities in areas such as energy, healthcare, international trade and investment, tax, data governance, rule of law, and government procurement.*

sustainability@ge.com

# Setting Public Policy Priorities

The businesses also provide input on the appropriate advocacy plan or strategy for achieving a successful outcome—including whether or not GE should advocate for a priority directly or through one of its trade associations or industry coalitions. In the latter case, GE can help facilitate coordination with other companies with similar priorities. Once each business has assessed and submitted its priorities, our Government Affairs & Policy team can better determine GE's overall public policy priorities and allocate resources to them accordingly. In evaluating public policy priorities for an upcoming year, Government Affairs & Policy works with GE's senior management to review the potential reputational consequences and risks of pursuing or not pursuing a priority. We set commercial priorities to increase shareowner value, mindful that our commercial success depends on progress on broader public policy imperatives.

# Lobbying Disclosure Policy

*Updated July 2018*

GE employees engage with public officials at all levels of government—local, state and federal. Employees educate officials on our Company's operations, emerging technologies and markets, as well as on our views on public policy issues. All advocacy done by our employees on pending US legislation is included in our Lobbying Disclosure Act (LDA) filings.

GE conducts lobbying activities in compliance with applicable laws and regulations governing such activities. In the United States, certain communications with federal, state and/or local government officials or government employees may be reportable as lobbying communications included in GE's LDA reports and/or state or local lobbying disclosure reports. Certain countries outside the United States may also require disclosure of lobbying activities.

Before engaging in lobbying activities, employees are asked to contact the Vice President, Government Affairs & Policy or his or her designee. GE regularly trains employees on what types of activities and communications constitute reportable lobbying activities. Prior approval from GE's Vice President, Government Affairs & Policy, is required before GE may retain an outside entity to engage in lobbying activities.

**Reviewing and Reporting Lobbying Expenses**

In limited circumstances, when an issue is of particular strategic importance, the Company may use advertisements or other public communications to urge support for specific legislation or public policy.

As part of its oversight role in public policy and corporate social responsibility, the Governance and Public Affairs Committee (GPAC) of the Board of Directors receives and semiannually reviews reports on the Company's lobbying expenses. GE uses the Internal Revenue Code (IRC) method to detail its lobbying expenses in its federal Form LD-2 lobbying report filed each calendar quarter. Under this method, expenses related to state and/or local legislative lobbying in all 50 states are included in GE's total lobbying expense reported each quarter and reviewed semiannually by GPAC. Grassroots lobbying expenses also are included in our LDA filings.

GE's Federal Lobbying Disclosure Reports are available here.

*GE conducts lobbying activities in compliance with applicable laws and regulations governing such activities.*

# Government Business

*Updated January 2018*

GE does business with a wide spectrum of federal, state and local governments, as well as with government contractors. The breadth of our government-business portfolio has grown in recent years through a series of acquisitions, primarily in the aviation and power businesses. While maintaining our focus on private-sector customers, we recognize that our managers and employees also must have a thorough understanding of the special requirements of our government customers.

The government customers who acquire our products and services also serve to fulfill public policy objectives, and therefore may request unique contract requirements such as domestic preference restrictions, socioeconomic provisions, and especially stringent business ethics and compliance obligations. GE employees recognize that government customers have a variety of means to enforce these unique requirements (both contractual and non-contractual, including civil and criminal sanctions, and administrative judgments) that go well beyond remedies available to our commercial customers.

**GE's Government Business Center of Excellence**

GE's compliance and integrity culture places us in an excellent position to pursue and perform work compliantly for governments and government contractors. But we don't just rely on our culture; we continue to emphasize with our employees and executives on how working with governments is unique.

For example, our Company-wide Government Business Center of Excellence (GBCOE) features a well-established Government Business Practice group, whose members represent each GE business. This group meets regularly and serves as a conduit for government business–related communications both to and from GE businesses. Many GE businesses, in turn, have formed business-level GBCOEs to build capability at the local level and elevate issues to the corporate GBCOE level as needed. The GBCOE conducts training on contemporary government-business topics, hosts conferences for more intense training and networking opportunities, and provides in-person training for specific GE businesses upon request.

The GBCOE intranet site hosts a wealth of information on government policies and processes, as well as training materials to support GE businesses that work with government customers. The site has been visited thousands of times, with GE's employees accessing the hundreds of helpful tools residing there.

*GE's compliance and integrity culture places us in an excellent position to pursue and perform work compliantly for governments and government-funded contractors.*

# Government Business

**Meeting Government Business Needs**
GE remains well prepared to meet the unique demands of our government customers and flourishes in this highly regulated environment. To help ensure our readiness, GE:

- Periodically solicits and compiles detailed information from our businesses that do business with US federal, state or local government agencies, based on GE's eight Government Business Standards. These self-assessments highlight the nature and type of government work that GE businesses are performing (including a risk profile); identify best practices and potential areas for improvement relative to the Standards; and enable GE to better target future government-business training curricula.
- Conduct numerous training sessions on key government-business topics each year—reaching employees in every GE business.
- Holds a Company-wide government-business conference for employees doing business with US federal, state and local government agencies.
- Conducts a number of in-person government-business training sessions at recently acquired businesses, introducing newly acquired personnel to the GBCOE, GE's Government Business Standards, and best practices tailored to the needs of the businesses.
- Supports the integration of acquired entities into GE.
- Partners with GE's government compliance counsel to reinforce "pay to play" restrictions in key US states where GE does business, and provide guidance when needed.
- Dedicates specific attention and resources to state and local contracting issues, which for many GE businesses represent all or substantially all of their government-business activities.
- Develops GE-wide implementation policies for many complex new procurement regulations to help ensure a consistently high-level of compliance.
- Closely monitors both final and proposed changes to government procurement–related legislation, policies, and regulations to assist businesses in understanding new requirements and establishing the appropriate compliance processes in a timely manner.
- Maintains—together with Corporate Litigation—a process for quickly identifying responsibility matters that may be reportable to US federal, state or local government customers.

# Political Contributions Policy

Updated January 2018

GE participates in the political process through contributions from the GE Political Action Committee (GEPAC) and through Company contributions, where legal and appropriate under state and local law. GE and GEPAC make bipartisan contributions to political candidates and initiatives that support strong public policy, promote sustainable growth and robust markets and—at the same time—promote innovation and the interests of the industries in which GE operates.

In making contributions, we naturally evaluate a candidate's position on issues of concern to the Company. Our contributions, however, are not based on the personal preferences of individual Company leaders. We base our contribution decisions on the best interests of the Company, on what we believe is sound public policy and, in the United States, on what we believe to be the best interests of the United States.

Among the factors that we consider in determining which candidates and initiatives to support, GE and GEPAC representatives balance the views promoted by a candidate, the quality and effectiveness of the candidate or organization to which the contribution is made, and the appropriateness of the level of involvement of GE in an election. With respect to particular candidates, the Company considers, among other factors:

- The personal characteristics of the candidate (including the candidate's integrity and effectiveness)
- Whether the candidate sits on a committee that addresses legislation affecting GE businesses or the global economy
- Whether the candidate represents a state or district within which a GE business operates or is located
- The candidate's committee standing and ranking
- The candidate's elected political leadership position and voting record

## Oversight

As part of its oversight role in public policy and corporate social responsibility, the Governance and Public Affairs Committee of the Board of Directors annually reviews the Company's policies and practices related to political contributions, contributions to campaigns, and contributions to trade associations and other tax-exempt and similar organizations that may engage in political activity. The committee also receives and reviews, semiannually, reports on the Company's political spending, including political contributions and contributions to trade associations and other tax-exempt and similar organizations that may engage in political activity. Each year, the committee approves a contributions budget in advance and issues a report on the Company's political spending.

GE participates in the political process through contributions from the GE Political Action Committee (GEPAC) and through Company contributions.

www.ge.com/sustainability

sustainability@ge.com

# Political Contributions Policy

## State and Local Contributions

US law prohibits companies from contributing to candidates for federal office, but many states allow corporate contributions to state and local candidates, committees, political organizations, and ballot-issue campaigns. As described in GE's code of conduct—The Spirit & The Letter—any contribution of Company funds or other assets for political purposes in the United States must be approved in advance by GE's Vice President, Government Affairs & Policy. Our compliance counsel works to ensure that contributions comply with the spirit and letter of applicable laws and regulations. Political contributions made with Company funds outside the United States also must be approved by GE's Vice President, Government Affairs & Policy. GE's foreign political contributions are currently limited to Canada.

GE believes it is important for our employees to be informed about public policy issues and, consistent with applicable law, will not take any adverse employment action against an employee based on his or her personal political affiliation or lawful political activity.

Our Corporate Oversight Board comprises designated senior executives within the Company, including GE's Senior Vice President & General Counsel, and GE's Senior Vice President & Chief Financial Officer. The board meets on a regular basis to review Company expenditures and ensure that controls are in place for compliance with our political spending policies, and that the expenditures and activities advance GE's objectives. Our political contributions are overseen by a multifunctional team made up of senior executives and representatives from Government Affairs & Policy, Legal, Finance, and other related functions. The relevant state government affairs manager, corporate finance manager, government compliance counsel, and the Vice President, Government Affairs & Policy, review and approve all corporate political contributions. Contributions of more than $5,000 may not be made without the approval of the Corporate Oversight Board.

The recipients of our donations are detailed in our bi-annual political contributions report.

## Associations

As one of the largest and most diverse companies in the world, GE belongs to many associations and coalitions in which we work with our industry partners and represent our Company's interests. In some cases, these associations and coalitions engage in advocacy at the state and federal levels. While we generally agree with the positions the associations take on public policy issues, membership in a particular trade association does not indicate agreement with all of the association's views. Occasionally, these associations take positions that differ from ours. In those cases, we engage with the associations to express our views.

For each association from which GE receives a notice stating that the association has spent or will spend $25,000 or more of GE's payments in a fiscal year on nondeductible lobbying and/or political expenditures under Internal Revenue Code Section 162(e), we ask the trade association to identify the portion of those payments used to fund independent expenditures expressly advocating for or against candidates in elections for public office. Any responses we receive to such requests are included in our political contributions report.

## Independent Expenditures

GE has a long-standing practice against using corporate resources for the direct funding of independent expenditures expressly advocating for or against candidates in elections for public office.

## GEPAC

GEPAC is an independent, nonpartisan, voluntary fund supported by GE employees who choose to participate in the political process by pooling their resources to support candidates who share the values and goals of the Company and our employees. GEPAC raises voluntary contributions from eligible GE employees and supports candidates for the US Senate and House of Representatives, and selected candidates in state elections. In addition, contributions to certain national party organizations are made when appropriate. GEPAC reporting includes contributions to GEPAC Federal, a separate PAC supported exclusively by GE employees who are subject to the US Securities and Exchange Commission (SEC), Municipal Securities Rulemaking Board (MSRB), and/or other rules that affect political contributions by certain financial professionals. The Federal Election Commission (FEC) regulates the activities of GEPAC and GEPAC Federal. Reports detailing these activities are available on the FEC website at http://www.fec.gov. GEPAC also makes contributions to certain state-office candidates, so long as federal PAC contributions to state-office candidates are permitted in accordance with state laws. These states include Ohio, Pennsylvania, North Carolina, South Carolina, and Texas. A committee made up of employees nominated from GE businesses and corporate components directs contributions. The GEPAC Board sets overall budget targets, and day-to-day decisions are delegated to a subcommittee of the GEPAC Board. GEPAC retains counsel to ensure compliance with the spirit and letter of all applicable laws and regulations.

We will include in our political contributions report any responses we receive to such requests.

### GEPAC Contributions

In 2017, the General Electric Political Action Committee (GEPAC) raised just over $1.5 million from more than 3,600 employees. This amount includes nearly $12,000 contributed by 25 employees directly to GEPAC–Federal, a separate PAC supported exclusively by GE employees who are subject to the U.S. Securities and Exchange Commission (SEC), Municipal Securities Rulemaking Board (MSRB) and/or other rules that affect political contributions by certain financial professionals. GEPAC and GEPAC–Federal contributed $1.47 million to candidates and committees in federal elections. GEPAC contributed $100,000 to candidates and committees in state elections in the United States. The Federal Election Commission (FEC) regulates the activities of GEPAC and GEPAC Federal. Reports detailing these activities are available on the FEC website, http://www.fec.gov.

For each association from which GE receives a notice that the association has spent or will spend $25,000 or more of GE payments in a fiscal year on non-deductible lobbying and/or political expenditures under Internal Revenue Code Section 162(e), we will ask the trade association to identify the portion of those payments used to fund independent expenditures expressly advocating for or against candidates in elections for public office. We will include in our political contributions report any responses we receive to such requests.

## GENERAL ELECTRIC GLOBAL CORPORATE POLITICAL CONTRIBUTIONS FOR 2015

| Payee | State | Party | Date | Amount |
|---|---|---|---|---|
| | Global Total | | | 720,975 |

For each association from which GE receives a notice that the association has spent or will spend $25,000 or more of GE payments in a fiscal year on non-deductible lobbying and/or political expenditures under Internal Revenue Code Section 162(e), we will ask the trade association to identify the portion of those payments used to fund independent expenditures expressly advocating for or against candidates in elections for public office. We will include in our political contributions report any responses we receive to such requests. Based on the information GE received in 2015, the National Electrical Manufacturers Association responded that they made a $12,000 contribution to the Democratic Legislative Campaign Committee and a $12,000 contribution to the Republican Legislative Campaign

*For each association from which GE receives a notice that the association has spent or will spend $25,000 or more of GE payments in a fiscal year on non-deductible lobbying and/or political expenditures under Internal Revenue Code Section 162(e), we will ask the trade association to identify the portion of those payments used to fund independent expenditures expressly advocating for or against candidates in elections for public office. We will include in our political contributions report any responses we receive to such requests.*

*For each association from which GE receives a notice that the association has spent or will spend $25,000 or more of GE payments in a fiscal year on non-deductible lobbying and/or political expenditures under Internal Revenue Code Section 162(e), we will ask the trade association to identify the portion of those payments used to fund independent expenditures expressly advocating for or against candidates in elections for public office. We will include in our political contributions report any responses we receive to such requests.*

*For each association from which GE receives a notice that the association has spent or will spend $25,000 or more of GE payments in a fiscal year on non-deductible lobbying and/or political expenditures under Internal Revenue Code Section 162(e), we will ask the trade association to identify the portion of those payments used to fund independent expenditures expressly advocating for or against candidates in elections for public office. We will include in our political contributions report any responses we receive to such requests. Based on the information GE received in 2012, the National Electrical Manufacturer's Association responded that they made a $20,000 contribution to the Republican Governor's Association.*

# GENERAL ELECTRIC GLOBAL CORPORATE POLITICAL CONTRIBUTIONS FOR 2011
## Non-US Contributions

| Payee | Payee | Date | Amount |
|---|---|---|---|
| CANADA | **Total Provincial Contributions** | 2011 | **$74,642.00** |
| | | **Global Total** | **$873,742.00** |

*For each association from which GE receives a notice that the association has spent or will spend $25,000 or more of GE payments in a fiscal year on non-deductible lobbying and/or political expenditures under Internal Revenue Code Section 162(e), we will ask the trade association to identify the portion of those payments used to fund independent expenditures expressly advocating for or against candidates in elections for public office. We will include in our political contributions report any responses we receive to such requests. Based on the information GE received in 2011, the National Electrical Manufacturer's Association responded that they made a $20,000 contribution to the Republican Governor's Association.*

*All Canadian contributions were made to provincial parties or individual constituency organizations.*

*For each association from which GE receives a notice that the association has spent or will spend $25,000 or more of GE payments in a fiscal year on non-deductible lobbying and/or political expenditures under Internal Revenue Code Section 162(e), we will ask the trade association to identify the portion of those payments used to fund independent expenditures expressly advocating for or against candidates in elections for public office. We will include in our political contributions report any responses we receive to such requests.*

*For each association from which GE receives a notice that the association has spent or will spend $25,000 or more of GE payments in a fiscal year on non-deductible lobbying and/or political expenditures under Internal Revenue Code Section 162(e), we will ask the trade association to identify the portion of those payments used to fund independent expenditures expressly advocating for or against candidates in elections for public office. We will include in our political contributions report any responses we receive to such requests.*

*Per GE's commitment beginning in 2007, for each association from which GE receives a notice that the association has or will spend $25,000 or more of GE's payments in a fiscal year on non-deductible lobbying and/or political expenditures under Internal Revenue Code ("Code") Section 162(e), we will ask the trade association to identify the portion of those payments used in connection with participation or intervention in a political campaign on behalf of (or in opposition to) any candidate for public office, as defined under Subsection 162(e)(1)(B) of the Code. We will include in our political contributions report any responses we receive to such request.*

*GE has not received notice from any Trade Association that payments have been used in connection with participation or intervention in a political campaign on behalf of (or in opposition to) any candidate for public office, as defined under Subsection 162(e)(1)(B) of the Code.*

# Table A
(as of May 23, 2018)

## Summary of Smelters and Refiners

# of Smelters and Refiners Reported in Our Supply Chain

| | A. RMI Conformant Smelters & Refiners | | B. RMI Active Smelters & Refiners | | C. Other Smelters & Refiners | | Total | |
|---|---|---|---|---|---|---|---|---|
| | 2016 | 2017 | 2016 | 2017 | 2016 | 2017 | 2016 | 2017 |
| Tantalum | 44 | 40 | 0 | 0 | 0 | 0 | 44 | 40 |
| Tin | 68 | 72 | 7 | 2 | 8 | 9 | 83 | 83 |
| Tungsten | 40 | 40 | 1 | 1 | 5 | 4 | 46 | 45 |
| Gold | 93 | 99 | 10 | 8 | 42 | 41 | 145 | 148 |
| **Total** | **245** | **251** | **18** | **11** | **55** | **54** | **318** | **316** |

We note the following in connection with the information contained in the foregoing table:

(1) The smelters and refiners reflected in the table were first-tier tungsten smelters or were identified by our Significant Suppliers as potentially being part of our 2017 supply chain. However, not all of the included smelters and refiners may have processed the necessary 3TG contained in the in-scope products that we manufactured, since many Significant Suppliers reported to us at a "company level" the 3TG contained in all of their products, not just those in the products that they sold to us. Some Significant Suppliers also may have reported to us smelters and refiners that were not in our supply chain due to over-inclusiveness in the information received from their suppliers or for other reasons. In addition, the smelters and refiners reflected above may not be all of the smelters and refiners in our supply chain, since many Significant Suppliers were unable to identify all of the smelters and refiners used to process the necessary 3TG content contained in the in-scope products that we manufactured and not all of the Significant Suppliers responded to our inquiries.

(2) "Conformant" means that a smelter or refiner was audited by the RMI and has been found to be conformant with the RMAP.

(3) "Active" means participants in the RMAP that have committed to undergo an audit or are participating in one of the cross-recognized certification programs.

(4) "Other" means the smelter or refined is not listed as "Conformant" or "Active."

(5) The table excludes two smelters that ceased operation in 2017.

(6) The compliance status information reflected in the table is based solely on information made available by the RMI to its members, without independent verification by us.

# Stem Cell Research and Technologies for Cell Therapies

Credit CCRM

*Updated January 2018*

GE develops and provides technology that enables pharmaceutical companies, clinicians and academic researchers to develop new therapies. This research includes the study, manipulation and storage of stem cells as a resource for drug discovery and manufacturing of cell-based therapies. GE uses pluripotent stem cells derived from both embryonic and adult sources for the development of predictive drug-screening applications and for technologies supporting the development and manufacture of cell therapies. GE Healthcare's cell therapy division also offers technology for efficient and reproducible processing of umbilical cord blood in adult stem cell processing. GE recognizes the sensitivities associated with the use of some types of stem cells.

Cell therapies and immunotherapies are changing the face of medicine, enabling doctors to address not just the symptoms of a disease, but also its underlying causes, essentially teaching the body to heal itself. The pace of current developments in cell therapy and immunotherapy is promising, with some researchers reporting unprecedented clinical outcomes. However, the field still has many issues to overcome, and GE's tools and technologies are helping customers make these new therapies affordable and part of mainstream clinical practice.

GE has ongoing and planned research that uses both adult-derived stem cells and established ES (embryonic stem) cell lines to develop drug research technologies and cell-based therapy applications.

GE conducts research in accordance with U.S. federal guidelines, as well as with the U.K.'s, and any other applicable country's, legislation and recommendations regarding stem cell research. Our ES cell research programs employ established ES cell lines approved by the National Institutes of Health or other cell lines established in accordance with good ethical practice. GE will not be associated with the primary harvest of human embryo–derived cells or tissues for its research.

In a rapidly evolving scientific field, our intention is for GE's position to accurately reflect the most recent government and public opinions, therefore, from time to time, we will update this statement to reflect such changes. This statement was last revised in January 2017.

We acknowledge the considerable debate over, and take very seriously the ethical and societal issues associated with, research using stem cells derived from embryonic or fetal tissue. We conduct our research in an ethically and scientifically responsible manner.

- *GE develops and provides technology that enables pharmaceutical companies, clinicians and academic researchers to develop new therapies.*
- *We conduct our research in an ethically and scientifically responsible manner.*

# Animal Testing

*Updated February 2018*

- *GE subscribes to the Three Rs principle*
- *GE uses animals in research and product development only when absolutely necessary*
- *GE is committed to using alternative non-animal studies wherever possible*

GE works with a limited number of animals, primarily rodents, in the discovery and development of novel diagnostic and healthcare products used in the identification and detection of disease. GE is committed to using the fewest number of animals that will provide scientifically sound data to help ensure the safety and efficacy of its products. GE is also committed to providing exemplary care in accordance with industry best practices for the care and welfare of laboratory animals. GE adheres to the "Three Rs" principle, through which the use of animals is reduced, refined and replaced. This principle forms part of the strict regime regarding the use of animals in medical research.

GE recognizes that the use of animals in medical research to advance scientific understanding of biological systems and to develop new medical technologies may be unsettling to some. However, others believe that the challenges and burdens resulting from diseases such as cancer, Alzheimer's, Parkinson's, heart failure and stroke support the carefully considered use of animals for research when other appropriate scientific methods are not available. Recent developments in the fields of genetics, molecular biology and advanced computing are providing unprecedented opportunities for advancements in the area of medical diagnostics while simultaneously reducing the need for the use of animals in research. While we expect that today's research will result in future medical diagnostic solutions that will benefit both healthcare delivery and patient outcomes, these future discoveries will be dependent, in part, on continued research involving the limited use of animals.

## Healthcare

GE Healthcare's goal is to enable healthcare providers to better diagnose, treat and manage their patients. A key technology in this effort is the visualization of biological processes at all levels within the human body—from the sub-cellular molecules and biochemicals that make up our genetic structure to cells, tissues and whole organ systems. To advance this technology, GE Healthcare performs medical research that requires the use of a limited number of animals to determine the safety of products and to satisfy the regulatory requirements of health authorities around the world. GE Healthcare's Life Sciences unit develops diagnostic products used to understand and enable the treatment of major diseases in conjunction with X-ray, computed tomography (CT), magnetic resonance imaging (MRI), ultrasound, and functional imaging systems. Contrast and radiopharmaceutical imaging agents are, in general, injected into the bloodstream to enhance images taken of the structure or function of internal body organs and tissues. GE Healthcare Life Sciences also develops and provides technologies for disease research and drug discovery, development and manufacture. These technology platforms allow researchers to better understand

www.ge.com/sustainability
sustainability@ge.com

# Animal Testing

the functions of genes and proteins that may be responsible for disease; to screen possible drug candidates and develop them for clinical trials; and to manufacture biopharmaceuticals, such as insulin.

## GE's limited use of animals involves the following:

- Developing products and technologies that help reduce the need for research involving animals
- Research toward development of novel diagnostics
- Safety testing of products to meet regulatory requirements
- Use of animal-derived materials in GE Healthcare Life Sciences' biological products supply chain
- Marketing of third-party biological products with animal origins

## The Use of Animals in Our Medical Research

- GE uses animals in research and product development only when absolutely necessary. The safety and efficacy of our products for use in humans is of paramount importance.
- Non-animal methods are important tools that are used to refine and support studies that require the use of animals. The use of animals still remains essential in bridging the gap between the discovery of safe and effective healthcare products and the conquering of disease. Where possible, we use and develop alternatives to animal studies.
- Health authorities across the world set stringent regulatory guidelines for the evaluation of new pharmaceutical compounds. These require that all prescription medicines intended for use in humans must be shown to be safe, effective and of the highest quality before being made available to treat patients.
- At present, it is not possible to determine the safety of products or meet the regulatory requirements of global health authorities without any animal studies.
- All animal studies must comply with local regulations, including appropriate licensing requirements. Studies must also be scientifically and ethically justified prior to initiation.
- GE is committed to using alternative non-animal studies wherever possible. Animals are used only when no suitable alternative is available. Our researchers subscribe to the Three Rs, which advocate for study designs in medical research that will reduce, refine and replace the use of animals.
- All animal studies are scrutinized and approved prior to initiation to ensure that they are both necessary and designed to minimize the number of animals used. Furthermore, all studies are designed to avoid or minimize pain, discomfort and levels of stress for the animals. Finally, once underway, studies are periodically monitored by ethical oversight boards to ensure compliance with all relevant policies and procedures.
- As part of its business, GE has developed a number of products and technologies that can help reduce the number of animals used in research, including gene chip microarrays developed for toxicology studies and the IN Cell Analyzer for studying the impact of new drugs on living cells in real time.

## Animals Used, by Species

GE subscribes to the Three Rs principle, which advocates for study designs in medical research that will reduce, refine and replace the use of animals. In the area of research involving animals, GE is considered low-volume in its use of animals.

Below is a summary by species of animals used by GE in the years 2009–2017.

| Species | 2009 | 2010 | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 | 2017 |
|---|---|---|---|---|---|---|---|---|---|
| Mice and Rats | 5,394 | 4,712 | 4,179 | 2,020 | 1,952 | 1,339 | 833 | 582 | 648 |
| Rabbits | 139 | 153 | 60 | 4 | 48 | 0 | 10 | 0 | 0 |
| Other | 127 | 24 | 47 | 8 | 19 | 32 | 0 | 40 | 10 |
| **Total** | **5,660** | **4,889** | **4,286** | **2,032** | **2019** | **1,371** | **843** | **622** | **658** |

GEA33679 2/2018

# Military Products

*Updated January 2018*

Most of GE's sales of military products and services is through GE's Aviation business, although GE's healthcare and power businesses also sell limited military products and services. GE's military products consist of components or subsystems of primary systems, including:

- Engines and propellers for propulsion of military aircraft and engines for military vessels
- Flight actuation, flight control, and mission and flight management systems for military aircraft
- Power generation, distribution, and conversion for military aircraft and vessels
- Aero structures for military aircraft
- Gears and other transmission components for military aircraft and vessels
- Non-explosive components and parts for weapons systems

The military aircraft and vessels supported by GE perform important national security, search-and-rescue, and humanitarian missions. We do not manufacture, assemble, sell or service cluster bombs, land mines or nuclear weapons, or component parts of cluster bombs, land mines or nuclear weapons.

GE Global Research conducts research and development associated with military healthcare, aviation, power systems, and electronics.

GE's military products and services are sold either directly to the US Department of Defense or to a foreign government's military agency, or indirectly to the US Department of Defense and foreign militaries through another commercial entity as a subcontractor.

GE complies with all US export control laws that govern the sale of military products and services, including the Arms Control Export Act, as well as with all US departments of state and commerce regulations governing these sales. GE also complies with the applicable export control laws in other countries from which it exports military equipment, and can only deliver to customers when the sales are consistent with those laws. Each GE business reviews its sales of military products and services, including sales to any foreign military customer, to ensure that any sale comports with these requirements.

*The military aircraft and vessels supported by GE perform important national security, search-and-rescue, and humanitarian missions.*

# Labor Relations

In the U.S., GE is party to a four-year national agreement with each of its two largest unions, the IUE-CWA and the UE (which together currently represent 9,450 employees). The larger of the two unions, the IUE-CWA, represents approximately 4,900 GE employees at 22 Company locations, while the UE represents approximately 1,500 employees at four locations[1].

Certain terms of these two contracts were also extended to, and approved by, nine other U.S. unions representing smaller groups of GE employees. These other unions are members of the AFL-CIO Coordinated Bargaining Committee (CBC), which has local contracts with GE, and represent an additional 2,900 employees. The IUE and UE national agreements, and a majority of the other local CBC contracts, expire on June 23, 2019. Other GE affiliates are parties to non-CBC labor contracts with various labor unions, covering approximately 1,500 employees[2], that have varying expiration dates.

GE's relationship with employee-representative organizations outside the U.S. takes many forms, especially in the EU. Information exchange and consultation occur through works councils, trade unions and employee-representative bodies at various levels of the business organizations. Formal trade union representation exists at many GE locations in the EU, while in others, notwithstanding the union membership of some employees, alternative employee-representative structures have been established. These include formal representative bodies, at the business, national, sector or site level, with which GE is legally obliged to engage in a range of circumstances, as well as health & safety committees in some countries. We estimate that our employees are represented by approximately 250 representative bodies throughout the EU. For pan-European issues, we currently have four European Works Councils (EWCs), each aligned with specific business divisions. Together, the EWCs cover approximately 35% of our European workforce. In addition, we have temporarily put in place a similar voluntary arrangement to represent employees of the recently acquired Alstom energy business. We are roughly two years into a maximum three-year negotiation process related to the creation of a new single EWC structure that will provide European-level representation to all GE employees outside of the Capital business and will ultimately supersede the existing arrangements at that level.

In China, 39 GE legal entities (including 13 legacy Alstom entities) have unions representing nearly 20,000 employees (Alstom, 4,695 employees), all affiliated with the All-China Federation of Trade Unions, including GE China's headquarters in Shanghai. Collective bargaining agreements are being negotiated at each of these locations.

[1] U.S. data as of December 2016.
