VOLATILE ORGANIC COMPOUNDS

chemical compounds that evaporate easily in normal conditions. Measuring grams of VOCs allows chemicals for gluing, cleaning or painting shoe components. Solvent-based adhesives release volatile manufacturing of product, while also maintaining the quality and physical integrity of the shoe and improved working conditions in factories. materials for reduction, substitution or elimination, thereby promoting lower environmental impact Disclosing chemical consumption in this manner also allows us to target specific, high VOC-content Timberland to account for the overall quantity of VOCs used in the production of our footwear. organic compounds ("VOCs"), which can create human and environmental health hazards. VOCs are that cause less harm to the environment. Traditionally, footwear manufacturers use solvent-based Timberland is committed to using adhesives in our stockfit and assembly shoe manufacturing process are conducted to promote the use of water-based To facilitate ongoing reduction efforts, engineering adhesive in the construction and

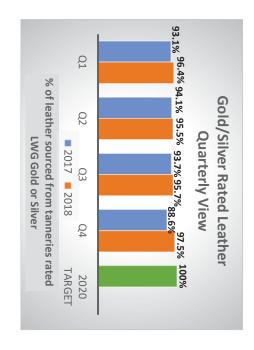

slightly higher than our 2017 result (51 grams/pair). over our Q4 2017 usage (50 grams/pair). We ended 2018 with a VOC average of 53 grams per pair, Q4/Year End 2018 Result: Our average use of VOCs per pair was 51 grams during Q4, a slight increase

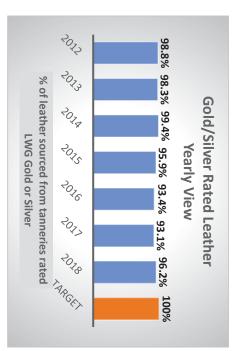

averaging 42 grams of VOCs per pair. the necessary performance attributes for our product lines. We remain committed to our goal of practices with other factories around the world to further reduce our use of VOCs while maintaining pre-treatment processes to minimize the VOC adhesives needed. We are working to share these best evaporation, upgrading VOC application equipment, more targeted application, and increased material reduce VOC usage, including employee training, better containment of VOC adhesives to prevent Timberland's manufacturing facility in the Dominican Republic has incorporated several strategies to

LEATHER – GOLD/SILVER RATED TANNERIES

on a scale of Audited, Bronze, Silver, or Gold, with separate percentage scores awarded for the degree apparel undergo an environmental audit under protocols established by the cross-brand Leather commitment to include the leather we source for our apparel products and accessories. footwear products from tanneries that have an LWG rating of Silver or Gold. In 2015, we expanded this of hide traceability. In 2008, Timberland made a public commitment to only source leather for our management to energy use and hide traceability. Tannery environmental audit performance is scored best practices and performance in all areas of leather production, from chemical, water and waste Working Group ("LWG"). LWG certification is awarded to tanneries that demonstrate environmental purchase is processed using environmental best practices, all our leather suppliers for footwear and Leather processing is a chemical, water, and energy-intensive process. To ensure the leather we

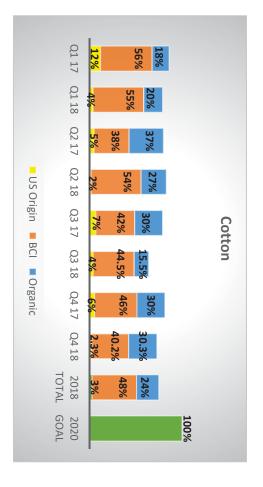

apparel, accessories and licensed products was produced at tanneries that have a Gold or Silver LWG rating. Q4/Year-end 2018 Result: During Q4, 97.5% of our overall leather volume used for Timberland footwear, When looking at leather used during Q4 for Timberland footwear only, 99.86% came from tanneries rated

and 99.1% of leather used for footwear only came from Gold or Silver rated tanneries. We remain committed to our goal to limit production at non-certified tanneries until they achieve Gold or Silver status For full-year 2018, 96.2% of leather used in all Timberland products came from Gold or Silver rated tanneries,

COTTON

the Better Cotton Initiative ("BCI"). cotton that is Certified Organic, Recycled or Fairtrade; of US-origin; or sourced as Better Cotton through accessories and licensed goods to be sourced more sustainably than conventional cotton. This includes conventionally grown cotton. Our new 2020 target is for 100% of the cotton used in our apparel, preference; however, when organic cotton is not feasible, we commit to eliminating our use of requires significantly more water than organically grown cotton. As such, Timberland has had a contaminating lakes, rivers, and waterways. Conventionally grown cotton uses more insecticides and Chemicals used to grow cotton can be detrimental to the health of farmers, and seep into run-off water longstanding goal of increasing our use of organic cotton year over year. Organic cotton remains our

2821 metric tons of cotton, 75% of which was organic (24%) BCI-certified (48%), or US-origin (3%). (602 metric tons) was either organic (24%), BCI-certified (48%) or US-origin (3%). For full-year 2018, Timberland used Q4/Year-end 2018 Result: In Q4, Timberland apparel and accessories used 826 metric tons of cotton, 73% of which

of a new sock licensee that is phasing into our requirements. They are the second highest user of cotton for Timberland production (1871 metric tons) was either organic (40%) or BCI-certified (59%). This increase was offset by the addition their use of responsible cotton during 2018. Ninety-nine percent (99%) of the cotton used for global apparel Our global apparel production, which accounted for 89% of all cotton sourced during the year, significantly increased products and are currently confirming best ways to incorporate responsible cotton into their line.

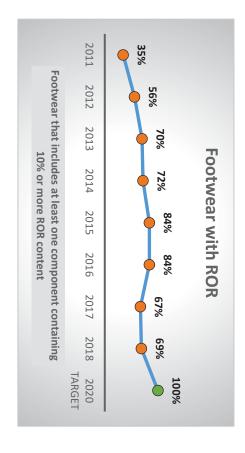

FOOTWEAR WITH RECYCLED, ORGANIC OR RENEWABLE MATERIALS

environmentally-preferred materials year over year. Renewable materials are defined by Timberland as and renewable ("ROR") materials in our footwear and set yearly targets to increase the use of these Since 2008, Timberland has had product development strategies for increasing the use of recycled, organic, compounds, hemp, bamboo). Our largest use of ROR in footwear is with recycled polyester ("PET") and plant-based materials which replace the use of fossil fuels in our products (e.g. castor bean oils used in outsole recycled rubber.

materials, we are confident that by 2020 every Timberland boot, shoe, and sandal will incorporate ROR a component). We are pleased with our progress over the years to increase our use of recycled, organic and materials. renewable materials. While some challenges currently exist in utilizing ROR materials over conventional made from organic, renewable or recycled materials (with a minimum threshold of 10% ROR content within The chart below reflects the percent of Timberland footwear that is constructed with at least one component

materials, including those used in minor components such as webbings, trims and labels. To drive focus toward using ROR content in more significant components of our footwear, we are no longer including In 2017 we changed our method of reporting our use of ROR materials. From 2011 to 2016 we included all these minor components.

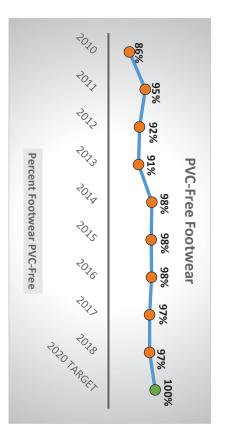

source of ROR materials in our footwear, incorporating over 717,519 pounds – the equivalent of 32 million our footwear. plastic water bottles. To date, we have incorporated the equivalent of over 345 million plastic bottles into footwear shipped, a slight improvement over our 2017 result. Recycled PET continues to be the largest 2018 Result: In 2018 significant materials with at least 10% ROR content were used in 69% of all Timberland

new product development and will be revisiting carry-over styles to engineer in ROR where there is none To further advance toward our 2020 goal, we have affected design policies that require ROR content in all

PVC-FREE FOOTWEAR

aspects associated with its creation and its end of life. Given the human and environmental risks associated cable insulation, and it is also used in the footwear industry. Unfortunately, the use of PVC has some negative We are committed to finding and utilizing PVC alternatives where feasible to decrease our use. Our goal is to with the creation and disposal of PVC, Timberland is committed to phasing out the use of PVC in its products. Polyvinyl chloride (PVC) is a polymer used in a wide variety of applications such as construction, plumbing, and be 100% PVC-Free

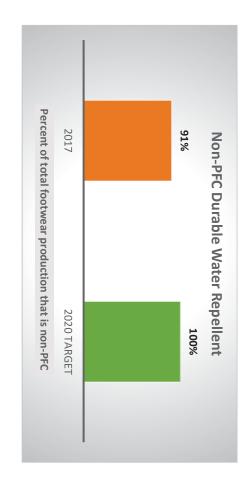

their policy at http://responsiblesourcing.vfc.com/policies-and-standards/. Substances List policy calls for a complete phase-out of PVC use in all products. further PVC reduction to occur. free material substitutions and to review materials and manufacturing equipment updates to allow for our PRO product line that cannot be met with current PVC-free alternatives. We continue to seek PVCto phase out PVC in our footwear. There are stringent performance expectations in certain styles in result. While not yet at 100% PVC-free, we are proud of the progress that we've made over the years 2018 Result: In 2018, 3% of Timberland footwear shipped contained PVC, which is even with our 2017 Additionally, our parent company VF Corporation's Restricted For more details see

NON-PFC DURABLE WATER REPELLENT

is committed to the elimination of all PFCs in our waterproof footwear and apparel. Our end goal is for humans – at the factory level where the waterproofing is applied, as well as to the end user. Timberland compounds) are a class of chemical substances found in many DWRs that are potentially hazardous to coating added to fabrics at the factory to make them water-resistant. waterproofing is of prime importance to outdoor enthusiasts. Durable Water Repellent ("DWR") is a Timberland products are built to protect our consumers from the elements of nature, 100% of our DWRs to be non-PFC. This was a new metric in 2016. PFCs (per-fluorinated

with PFC-based DWRs have specific performance requirements that, to-date, can only be achieved with PFCour top volume waterproof leathers and are excited to report our success this year. Our remaining products working towards this goal. We have made significant efforts to eliminate PFC-based DWR treatments from Non-PFC chemistry innovations that can achieve the required performance attributes for these products based chemistry. We are actively researching and engaging chemical suppliers with the goal of identifying 2017 Result: Although this is our first time reporting on our Non-PFC DWR status, it is not our first year

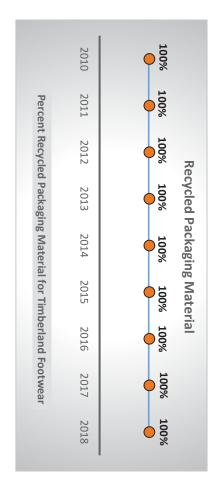

We are still collecting the data for non-PFC DWR in apparel fabric and will update the above chart once this has been finalized

(2018 data not yet available – we will include in our Q1, 2019 reporting.)

FACTORY CONDITIONS – COMPLIANCE RATINGS

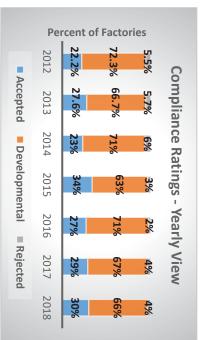

making Timberland product around the world dates back to 1994, with the establishment of our Code of Conduct for locations. At the end of each VF audit, the factory receives one of the following ratings: VF-branded product. This includes all cutting facilities, sewing plants, screen printers, embroiderers, laundries, and packaging Engagement and Global Compliance Principles. VF's policy is to monitor every facility that is involved in the manufacture of suppliers. Timberland's longstanding commitment to ensuring fair, safe and non-discriminatory workplaces for the 250,000+ workers After being acquired by VF Corporation ("VF") in 2011, our Code of Conduct was replaced by VF's Terms of

- at which time a re-audit is necessary to maintain an 'Accepted' rating. Accepted – factory has no serious safety, health, or labor issues and is certified to produce VF products for 12 months,
- while the issues identified are corrected in a timely manner and a follow-up audit is scheduled within 6-9 months. satisfactorily resolve the outstanding issues or be downgraded to 'Rejected.' factory is downgraded to 'Pending Rejection-180 days' ("PR-180 days"), at which time they have a final 6 months to If the problems are corrected as required, then the status of the factory will be elevated to 'Accepted.' If not, the Developmental – factory has some minor safety, health, or labor issues. The factory is authorized to produce for VF
- Rejected factory has major safety, health or labor issues. Examples would include excessive working hours, produce VF products. If a factory is Rejected twice consecutively, they are banned from producing for VF for 12 incorrect overtime compensation or locked emergency exits. In this situation, the factory is not authorized to

Worker Residence and Environment. Metrics below include results of both standard compliance audits and life safety audits Life Safety Audits cover Legal Business Practices, Child Labor, Forced Labor, Health and Safety, Monitoring and Compliance, In 2017, VF Compliance began auditing Tier 2 suppliers (textile mills, outsole factories, and tanneries) for life safety issues

For more detailed information, please see VF's audit policy.

(43%) were rated Accepted, and 241 (57%) were rated Developmental. tanneries, 61 fabric mills and component suppliers, and 14 independent distributor factories. this equates to 65 footwear factories, 162 apparel factories, 90 factories producing licensed goods and accessories, 30 Q4 2018 Result: At the end of Q4, there were 422 factories actively producing for Timberland. Broken down by business unit, One hundred seventy-one

to other factories Rejected factories are on hold until the factories are re-audited and favorable ratings are attained, or production is relocated Rejection are working on their corrective action plans and will be re-audited within 6 months. Purchase orders with the were rated Developmental, 7 (6%) were rated Pending Rejection, and 5 (4%) were rated Rejected. The factories rated Pending VF Compliance audited 120 Timberland factories during Q4. Of these 120 factories, 38 (32%) were rated Accepted, 70 (58%)

or factories that are on a 24-month audit frequency. were not conducted would be factories that were covered by a 2017 audit and dropped in 2018 prior to their audit due date, the data does not include the 138 factories that were not audited but approved to produce in 2018. Examples of why audits shows the results of the audits physically conducted in 2018 - this does not represent our overall supply chain ratings because Full-Year 2018 Result: In 2018, 495 audits were conducted by VF Compliance at 410 Timberland factories. The graph above

Timberland sourced from a total of 529 factories in 2018. When looking at all factories that produced in 2018, including those not audited in 2018, and those dropped midyear, our overall supply chain risk can be summarized as follows: 37% were actions were implemented or production was relocated.) Accepted, 62% were Developmental, and 1% were Rejected (orders with Rejected factories were withheld until corrective

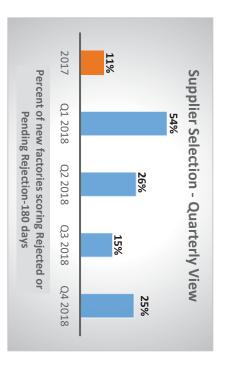

as anything over 60 hours per week or working more than 6 days consecutively. Minimum wage issues were also reduced in Working hours were cited in 16% of the audits conducted in 2018, down signigicantly from 2017 (36%). VF defines this issue audit policy. 2018, only found in 2% of factories audited. For a full list of all topics included in the VF Compliance audits, please see VF's

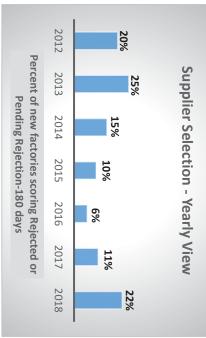

factories on a quarterly basis. See the most recent factory list here. Although our supply chain sources may change from time standards and shared solutions – helping to advance global human rights in all our factories. For this reason, we disclose our to time, our quarterly factory disclosure represents our best attempt to disclose all of Timberland's active factories as of that Timberland believes, along with others in our industry, that factory disclosure and collaboration can create common

locations of suppliers in a region and users can zoom in for a close-up look at each supplier, including onsite inspections, responsibility – from raw material extraction to VF distribution centers. production of VF's apparel and footwear meets the corporation's standards of quality, sustainability and social 9 of its most iconic products.
