

Trèves Group Corporate Social Responsibility Policy & Sustainable commitments

Trèves Group, a family owned Company established in 1836, is committed to design, develop and manufacture environmentally conscious products which contribute to the reduction of thermal and acoustic emissions for the global automotive industry.

We are engaged in a sustainable development approach through concrete actions concerning our products, services and operational activities to ensure satisfaction of all our stakeholders. Our belief in the values and principles of the UN Global Compact initiative and the associated seventeen sustainable development goals is a prerequisite of our operational excellence and customer satisfaction.

In order to ensure the sustainable development of the Treves Group, we identified five sustainable commitments that will enable us to determine continuous improvement targets and make a contribution to our business and to society. All the actions to achieve and maintain this commitment to sustainability and their goals for continuous improvement are integrated into our management system.

This will ensure consistency and alignment with our business strategy.

Continuous improvement of this system shall be an ongoing objective. It will help to develop a true culture of sustainable development based on strong managerial commitment and responsible behaviour by internal interested parties, in line with our "One Trèves" values.

We believe truly that implementing and sharing our values and sustainable commitments with our stakeholders will contribute to the improvement of peace and prosperity for people and the planet, now and into the future.
