Message from the President

Addressing the Pandemic

First of all, I would like to express my deepest condolences to the families of those whose lives were lost to COVID-19. I pray that all those suffering from the virus will recover as soon as possible. I would also like to express my sincere appreciation to all the national and local government officials working to minimize the spread of infection, and to everyone on the medical frontlines working day and night to treat patients.

People around the world are now facing a kind of uncertainty many have never experienced before. The COVID-19 pandemic, which spread across the planet in a matter of weeks, has changed society. In most countries, citizens have been asked to restrict their daily activities, and the business operations of companies in many sectors have been severely curtailed.

At Konica Minolta, we have addressed this crisis by doing all we can to prevent the spread of the virus, giving top priority to safeguarding the health and safety of group employees and their families, while also offering support to many customers who are directly combatting the pandemic. For instance, we donated ultrasonic diagnostic equipment to hospitals in Wuhan, China, during the lockdown there. We also provided non-contact, real-time systems for measuring body surface temperature to customers around the world. These efforts were initiated from the bottom up by group employees at individual sites. I think this demonstrates who we are at Konica Minolta. I am proud that our employees have a sincere desire to make a difference in the world.

Konica Minolta is prepared to maintain its business activities while coping with the effects of COVID-19 for at least the next few years. Amidst today's "new normal," our determination to support people in their work and daily lives is stronger than ever. The entire Konica Minolta Group is committed to working together to accelerate business transformation and overcome every challenge in our way.

Solving Social and Environmental Issues under the Medium-Term Business Plan SHINKA 2019

We have been implementing our Medium-Term Business Plan SHINKA 2019 for the last three years now, seeking to become a digital company with deep insight into implicit challenges customers face. Working to help our customers transform workflows, we have focused on enhancing the workplace motivation of their people and helping to resolve the issues confronting the broader society.

The Konica Minolta Group has been providing new solutions that address social issues in a number of fields. Konica Minolta's Workplace Hub, for example, supports diverse work styles at our corporate clients while boosting productivity and creativity. Meanwhile, our bio-healthcare business is helping to deliver precision medicine. Improving quality of life for both caregivers and care recipients, our HitomeQ Care Support service is streamlining workflows for caregivers. In yet another field, our gas monitoring solution makes gas leaks visible at plants using non-contact, remote-monitoring technology, thereby preventing accidents and helping to ensure the safety and security of urban areas.

Konica Minolta has also been addressing the urgent crisis of global climate change. The scope of participants in our "Carbon Minus" program has grown to include not only our corporate clients and suppliers, but also companies in other industries. I am delighted to see this Environmental Digital Platform facilitating the sharing of environmental expertise across Japanese industry.

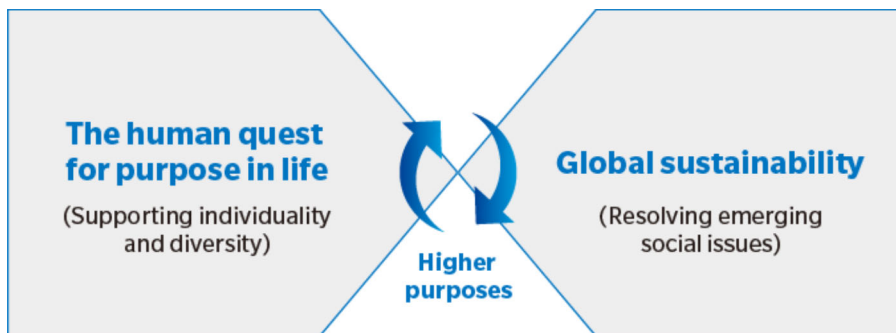

Long-Term Management Vision for 2030

We have announced our long-term management vision for 2030. The purpose of creating the vision was to provide a clear image of what we want the Company to be in 10 years, well beyond the end of the pandemic, and then to backcast to determine what we need to do now as a group to fulfill the vision.

In drawing up the long-term management vision, we thoroughly discussed the question, “Ten years from now, what will the Company’s reason for being be?” We noted that, since the very beginning, we have been working to satisfy the needs of customers around the world. Our focus has been on image inputting, outputting and processing, leveraging the expertise we developed in the camera and photo businesses. Imaging technology is at the heart of our identity, our DNA. By further developing that DNA and fulfilling people’s desire to “visualize the invisible” in various ways, we can improve fulfillment in work and corporate dynamism at our corporate clients.

In all of this, we seek to help build a sustainable world. Our discussions led us to a clear conclusion: our reason for being is supporting the human quest for purpose in life and contributing to global sustainability. These two ideas are encompassed in our management vision statement, “Imaging to the People.”

Our reason for being

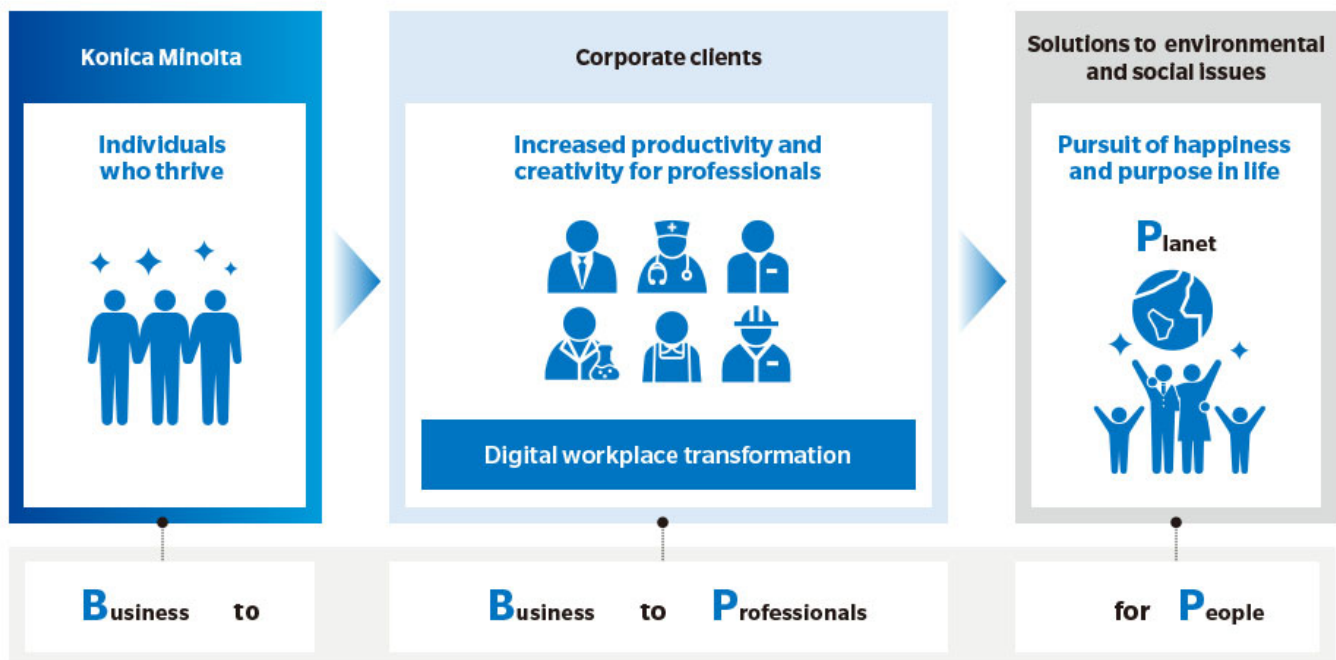

Management Vision for 2030

How We Will Deliver on Our Management Vision: “B-to-B to P-for-P”

We will move from a “business-to-business” model to become a company of “professionals for people” in order to achieve our management vision. We call this our “B-to-B to P-for-P” approach. We aspire to be about so much more than providing B-to-B products and services. We want to support the transformation of people (the “professionals”) working at our diverse corporate clients in fields such as manufacturing, healthcare, and caregiving. By increasing the productivity and creativity of these frontline professionals, we will ultimately enrich the lives of consumers and end users (the “people”). We will implement this “B-to-B to P-for-P” approach, leveraging the imaging technology from all of our business areas to solve workplace issues, thereby helping to build a society where people can feel happier and lead more fulfilling lives.

The B-to-B to P-for-P approach for achieving our long-term management vision

Identifying Material Issues for Konica Minolta

To ultimately achieve our management vision, Konica Minolta must first anticipate how the world will likely change, and what social issues will become critical. In developing our long-term vision, we forecasted what the key social issues will be a decade from now. Among them, we identified the five issues with the greatest importance to Konica Minolta, and defined the corresponding social value we will provide to help resolve them. These five material issues represent opportunities for Konica Minolta to capitalize on its intangible assets to provide a great deal of value to the world. Thus, we designed our vision for 2030 to address each of these five issues, setting the medium- to long-term course for how Konica Minolta will create value. We then devised a three-year medium-term management strategy by backcasting from the vision for 2030. Going forward, we intend to set KPIs for each of the five material issues from the perspectives of social/environmental value and economic value. The first will be an indicator of social and environmental value that quantifies the impact of our efforts to help solve social and environmental issues. The second will be an indicator of economic value that quantifies the contributions these activities make to revenue. By incorporating these KPIs into the plans of each business division, we will drive both business growth and sustainability.

Positioning Sustainability at the Core of Management

Since becoming president six years ago, I have made sustainability initiatives an integral part of the Company's management and business strategies. My management approach is based on my conviction that helping to build a sustainable world will also lead to sustainable growth for Konica Minolta. Since the business integration of Konica and Minolta in 2003, the Company has been seeking to create new value by addressing social issues as the basic strategy for business and corporate growth. This approach has permeated the entire Konica Minolta Group. Our employees fully embrace our 6 Values, and based on that awareness, they take the appropriate action independently. This corporate culture is a major strength for Konica Minolta. Our new long-term management vision and five material issues have made Konica Minolta's path to the future even more clear — we must continue to help solve diverse social and environmental challenges. Konica Minolta will support the human quest for purpose in life and contribute to global sustainability. That is how we will continually improve our corporate value. I invite you to follow our progress in the coming months and years.

Shohei Yamana
President and CEO
Konica Minolta, Inc.
November 2020

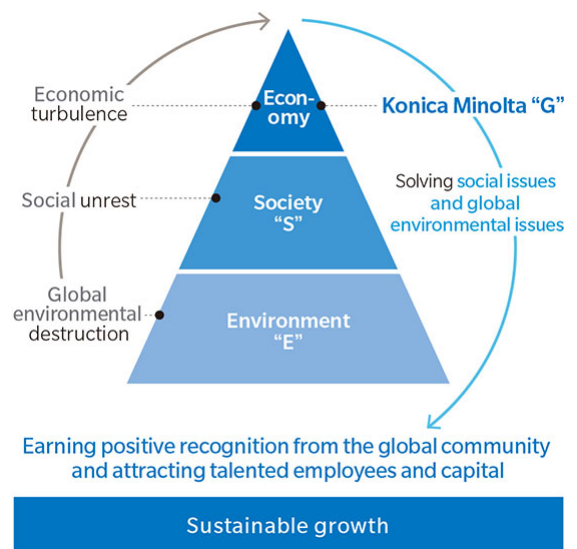

Message from the Sustainability Officer

Growing the Business to Provide New Value That Helps Build a Sustainable Society

If greater social unrest is triggered by the destruction of the global environment, it will also impact economies and financial systems worldwide. However, by working to solve global environmental and social problems, we can minimize future risks while creating opportunities for growth.

Konica Minolta's management vision is "Imaging to the People," and we are working hard to help build a sustainable society by continuing to evolve by practicing co-innovation with our customers. We will continue to take on the challenge of innovation that can promote both the growth of our business and the creation of new value for the global environment and all of humanity.

Progress Made under SHINKA 2019

We identified six material issues under SHINKA 2019, which ran through 2019, and took action to address them. Our aim was to ensure our initiatives link solutions to social issues with our business activities, reflecting the changes in business and society. In social innovation, one of the six material issues, we provided solutions that help to solve social issues, leveraging our core technologies and innovations. For instance, we developed and marketed the HitomeQ Care Support service to help transform caregiver workflow. This solution improves caregiver work efficiency by about 30%. We also launched a social enterprise collaboration called Care Philosophy Partners Conference (CPPC). Together with nursing care providers and IT service companies, Konica Minolta has been working with other industries to better meet the challenges facing today's aging society. We created new solutions in various other fields, as well. Workplace Hub supports diverse work style needs. It offers solutions that are one step ahead, including the ability for personnel to work remotely in a highly secure IT environment, and to engage in internal and external collaboration. In another field, our gas monitoring service has made the location and severity of gas leaks visible using image processing technology. It helps provide consistent monitoring that is not dependent on the maintenance operator's skill, while ensuring the safety of repair work.

On the environmental front at Konica Minolta, we moved forward with our Eco Vision 2050, which includes the goal of achieving “Carbon Minus” status by 2050. To achieve this goal, in addition to lowering our own CO₂ emissions over our product life cycles by 80%, we also have to reduce CO₂ emissions not related to our product life cycles, by helping customers and business partners to solve their environmental issues. In other words, our “Carbon Minus” goal can only be achieved by offsetting more than just the CO₂ emissions attributable to Konica Minolta.

Under SHINKA 2019, we reduced CO₂ emissions throughout our product life cycles by approximately 50% compared to fiscal 2005. In addition, along with lower CO₂ emissions and resource usage, Konica Minolta realized an energy and resource cost reduction effect in production processes of approximately 1.8 billion yen over the three years of the plan. Thanks to our Green Marketing Activities, which provided customers with our environmental expertise, interest in our environmental products and services increased, making a revenue contribution of 780 million yen in fiscal 2019. This demonstrated the effectiveness of our strategy to increase profit by tackling environmental issues.

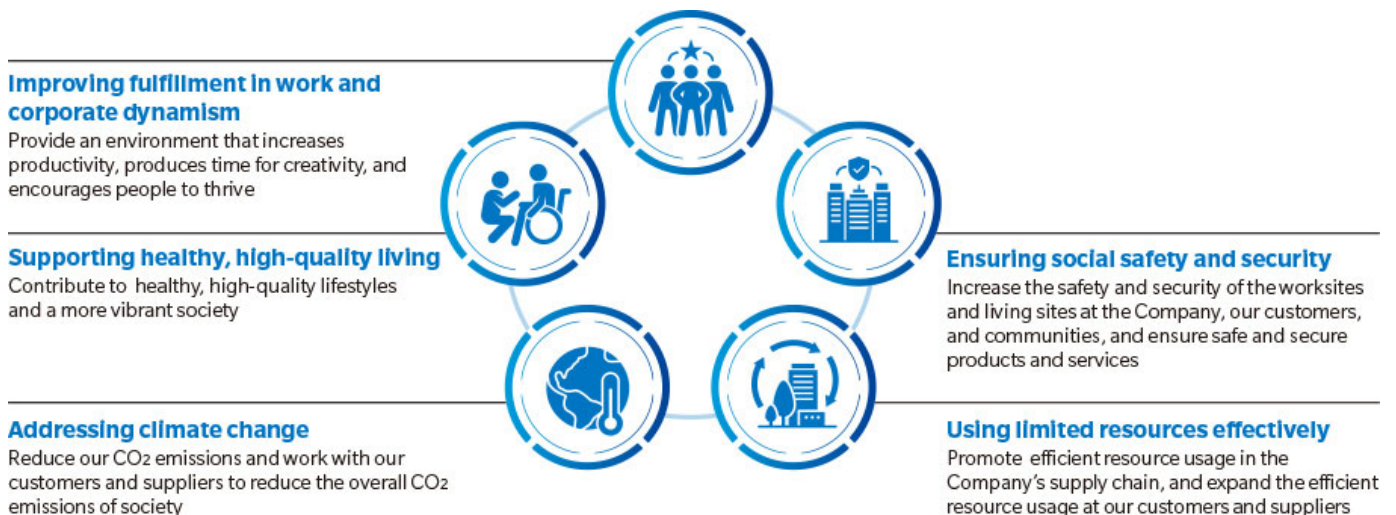

Our sustainability initiatives have earned the Company ongoing inclusion in major ESG indices such as the Dow Jones Sustainability World Index. Our efforts have been affirmed by numerous global ESG ratings, as well. In Japan, Konica Minolta won the top award at the Nikkei SDGs Management Grand Prix.

Addressing Five New Material Issues with Digital Transformation (DX)

In fiscal 2020, Konica Minolta introduced a new long-term vision and began working on a medium-term business strategy called “DX2022,” to be achieved by 2030. While drafting these plans, we identified the social issues that ought to be addressed by 2030, and then set our objectives for the medium term through backcasting. After analyzing various issues expected to be critical by 2030, we conducted a materiality analysis from the perspectives of social issues that must be solved, and Konica Minolta’s business growth. This led to the identification of five new material issues for Konica Minolta to tackle: (1) improving fulfillment in work and corporate dynamism; (2) supporting healthy, high-quality living; (3) ensuring social safety and security; (4) addressing climate change; and (5) using limited resources effectively.

Our Medium-Term Sustainability Strategy 2022 has been drafted based on these five new material issues. The plan includes quantitative KPIs for the creation of social and environmental value as well as economic value for each of the five material issues. The aim is to grow our business by helping to solve social and environmental issues, which will lead to corporate growth.

The five material issues

Helping to Solve Social Issues by Advancing Konica Minolta's Imaging IoT Technology and Combining It with Digital Technology

The world is looking to corporate innovation to help solve today's increasingly urgent social and environmental issues. By combining imaging IoT and digital technologies to "visualize the invisible," Konica Minolta will work to transform the workflows used in the workplace and contribute to society by making people's lives even more fulfilling.

Under the new strategy, the first material issue is "improving fulfillment in work and corporate dynamism." As work styles continue to diversify, we are providing solutions that increase productivity and make creativity-inspiring work styles possible in diverse locations — all the while supporting the human quest for purpose in life, improving fulfillment in work, and fostering corporate dynamism.

The second material issue is "supporting healthy, high-quality living." Here, we are enhancing the diagnostic function of clinics and other neighborhood primary care settings by providing diagnostic imaging analysis technology that uses AI, and by supporting diagnosis through a network of specialists. In addition, we are helping to make the workflow at nursing care facilities visible using image analysis and AI to reduce the burden on caregivers. By making it possible to provide more finely tuned nursing care services, Konica Minolta is also helping seniors to remain independent.

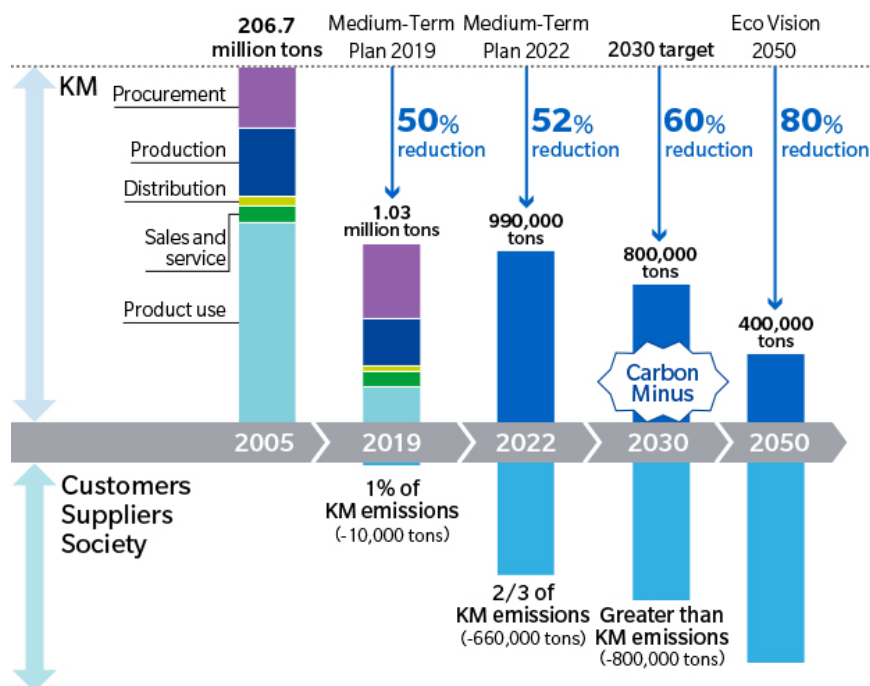

The third material issue is "ensuring social safety and security." To address this, we are providing technology to enable non-contact and remote monitoring and inspection at factories and plants. By predicting process irregularities and risks in ways that surpass the visual skills of frontline workers, we aim to prevent accidents and ensure the safety and security of factories and surrounding communities.

Driving Drastic CO₂ Emissions Reduction with DX, to Achieve "Carbon Minus" Status by 2030 Instead of 2050

With the implementation of our new long-term vision and medium-term business strategy, "DX2022," we have decided to bring forward our goal to achieve "Carbon Minus" status to 2030. Utilizing digital transformation (DX) technologies, Konica Minolta will promote collaboration with even more corporate clients and business partners, taking on the challenge of broad-scope reduction in environmental impact.

One example of this is the digitization of our Green Supplier Activities, which provide business partners with Konica Minolta environmental expertise. Until recently, our specialists visited the factories of our business partners to perform energy-saving diagnoses. By digitizing and automating our diagnostic expertise, we have developed a system that allows business partners to perform energy-saving diagnosis and implement measures on their own. We anticipate that this will dramatically expand the scope of our activities and further accelerate environmental impact and cost reduction.

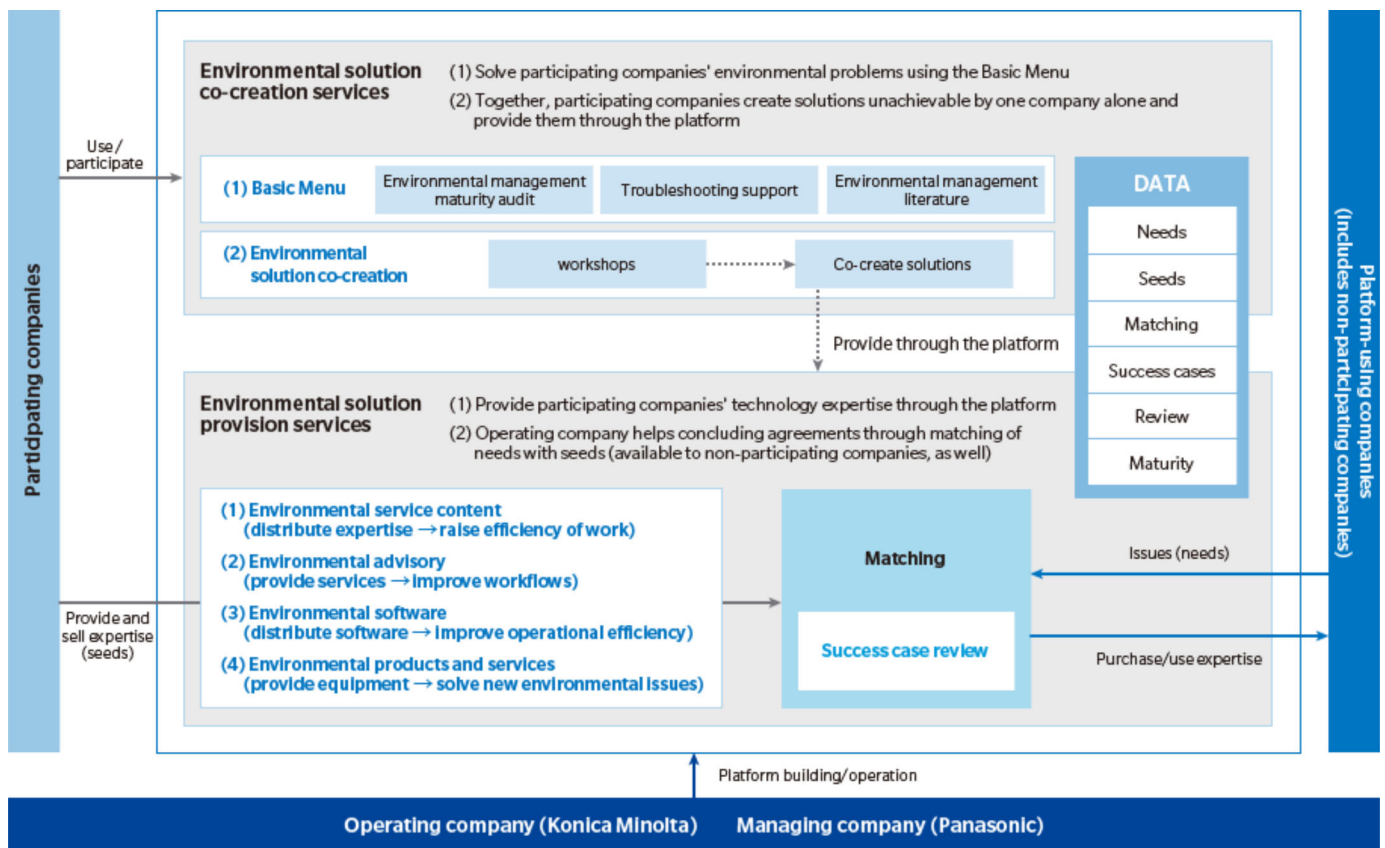

Carbon Minus by 2030 (instead of 2050)

Another key initiative is our Environmental Digital Platform, launched in June 2020. This system helps to improve the efficiency of environmental management by allowing Konica Minolta and each participating company to share their knowledge and expertise in order to co-create new value. The platform is operated with the cooperation of Panasonic Corporation as the administrating company, based on its abundant expertise and global solutions. This network for co-creation started with 15 participating companies and will continue to steadily expand.

The platform has two spaces. The first is a place for participants to co-create solutions. It allows participating companies to bring together their technologies and expertise to create new solutions for challenges that are difficult for companies to solve alone. The second is a place where participants share and utilize their respective environmental technologies and expertise in the form of solutions that are already proven. Via these two spaces, Konica Minolta aims to help solve environmental issues on a global scale. This can be achieved by accelerating the resolution of environmental challenges through collaboration between companies, and by promoting innovation through co-creation.

Environmental Digital Platform

We are determined to achieve sustainable corporate growth by delivering on our new three-year medium-term business strategy. We will do this by pursuing collaboration with many different companies in order to bring about drastic reductions of environmental impact in society as well as drive our own growth.

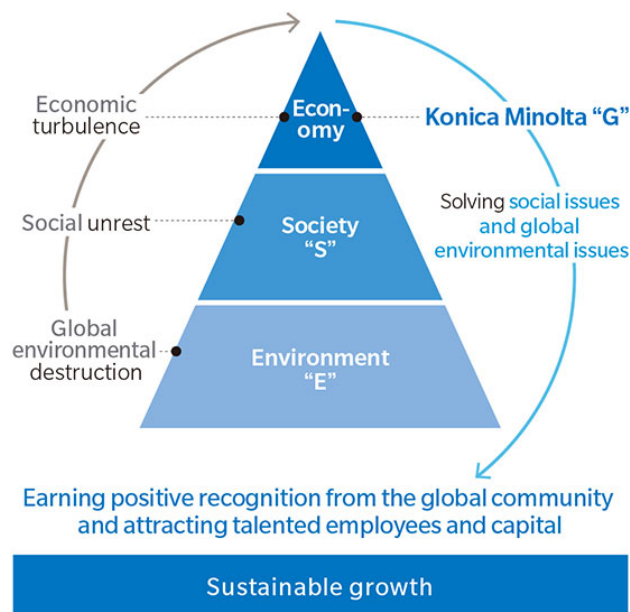

November 2020

Basic Approach and Systems for Sustainability Management

Basic Approach: Grow the Business by Providing New Value That Helps Build a Sustainable Society

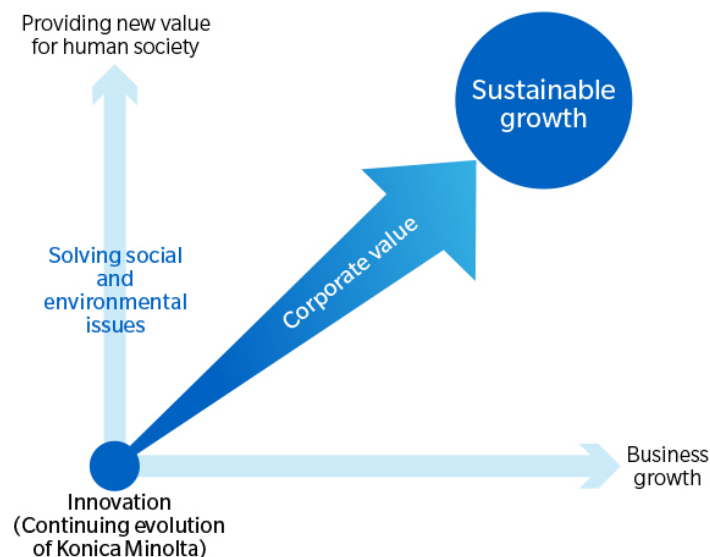

Konica Minolta has prospered together with society by continuing to provide the new value required in each era, living up to its philosophy, "The Creation of New Value." Helping to build a sustainable society also promotes corporate sustainability. If greater social unrest is triggered by the destruction of the global environment, it will also impact economies and financial systems worldwide. However, by working to solve global environmental and social problems, Konica Minolta can minimize future risks while creating opportunities for growth.

Konica Minolta's management vision is "Imaging to the People." It states the company's determination to be a robust, innovative company, continually evolving and contributing to the sustainable growth of society and individuals. Konica Minolta will continue to take on the challenge of innovation — and co-innovation with customers — that can promote both the growth of its business and the creation of new value for the global environment and all of human society.

Enhancing Corporate Value for Sustainable Growth

For a company to grow sustainably, it must continually provide new value for human society as well as achieve business growth. To further its own evolution, Konica Minolta is determined to generate innovation to help solve social and environmental issues. By linking this effort to financial performance, Konica Minolta seeks to enhance its corporate value and achieve sustainable growth.

Konica Minolta Group Charter of Corporate Behavior

Konica Minolta's efforts to achieve sustainability are based on the Konica Minolta Group Charter of Corporate Behavior and its basic approach to sustainability management. The Konica Minolta Group Guidance for the Charter of Corporate Behavior is shared globally and illustrates desirable behavior in each of the categories included in the Charter as a basis for understanding and practicing desired behavior.

Sustainability Management System

At Konica Minolta Inc., the President and CEO, who is a member of the Board of Directors, is tasked with the ultimate responsibility and authority for overall sustainability management and is also responsible for the effectiveness of the company's sustainability management. The actual sustainability management activities for the entire Group are executed by the Group Executive for Corporate Sustainability, under the President. The Group Executive for Corporate Sustainability creates a medium-term plan for sustainability, which is approved by the Board of Directors as a management plan for the entire Group. The Group Executive for Corporate Sustainability then reports monthly to the President and the Audit Committee established in the Board of Directors on progress made on and issues in sustainability management.

The same Group Executive also reports annually on sustainability progress under the medium-term management plan SHINKA 2019 (FY2017-FY2019) during Board of Directors meetings, and obtains advice and opinions.

The company established a Group Sustainability Promotion Committee as an organization that promotes the Group's medium-term sustainability plan. The Corporate Sustainability Division serves as the secretariat of the Committee, whose members are persons responsible for sustainability promotion appointed by the heads of the business divisions, corporate planning and management divisions (planning, IR, HR and others), and R&D divisions. The Committee discusses the medium-term sustainability plan and the annual plan, checks the quarterly progress, and reviews the Group's sustainability issues.

Since fiscal 2017, the company has been promoting sustainability as part of its management activities by including non-financial indicators such as ESG in the performance evaluation items of executive officers.

Konica Minolta Group Charter of Corporate Behavior

Corporations, in addition to being economic entities engaged in the pursuit of profit through fair competition, should be beneficial to society at large. For this reason, Konica Minolta Group shall behave in a socially responsible manner and shall have all of its directors, officers, and employees clearly acknowledge the spirit of this Charter of Corporate Behavior.

Senior management shall recognize that the fulfillment of the spirit of this Charter is its own role and responsibility, and shall take the initiative to ensure that all directors, officers, and employees fully understand the Charter. In addition, the management shall constantly pay attention to the opinions of internal and external parties, and shall promote the implementation of effective systems to secure ethical corporate behavior.

1. Beneficial and Safe Products

We shall strive to earn the confidence of consumers and clients through the development and provision of socially beneficial products and services with the utmost consideration for safety.

2. Fair and Transparent Corporate Activities

We shall, in the pursuit of fair and transparent corporate activities, comply with laws and social regulations and act in accordance with international rules and the articles of incorporation.

3. Communications with Society and Information Disclosure

We shall communicate with society at large and disclose corporate information fairly and adequately.

4. Environmental Protection

We shall acknowledge the seriousness of global environmental issues, and shall act voluntarily and affirmatively to protect the environment.

5. Contribution to Society

We shall, with a global perspective, affirmatively make contributions to society while respecting local customs and cultures.

6. Respect for Employees

We shall endeavor to make the lives of employees comfortable and fulfilling, provide a safe work environment, and respect each employee's personality and individuality.

7. Responsible Actions

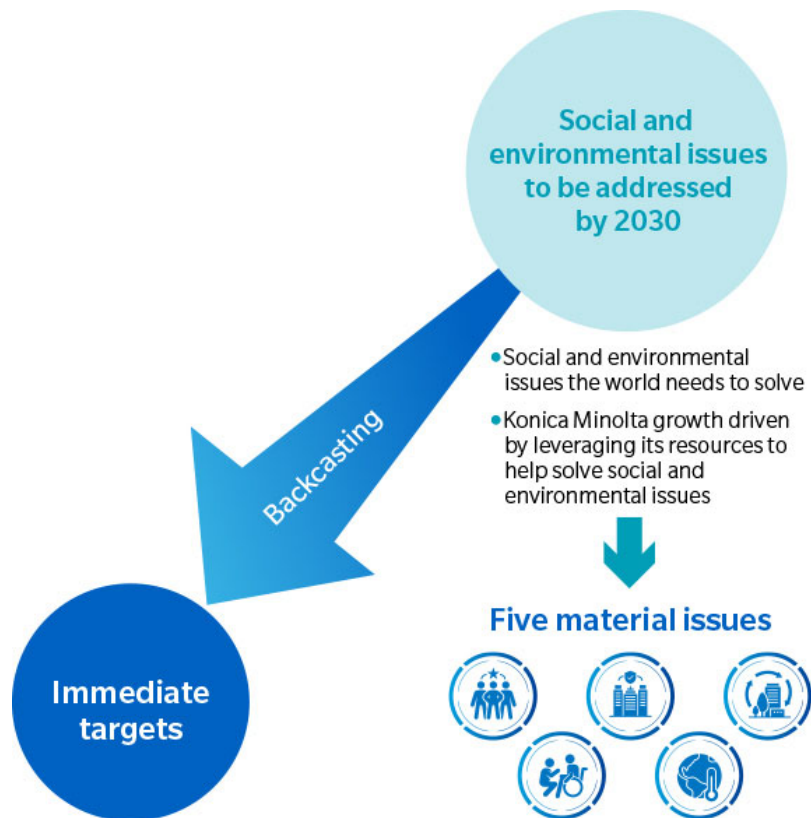

In the event of a violation of the principles of this Charter, in order to solve the problem, senior management shall investigate the cause of the violation and develop reforms to prevent its recurrence in accordance with corporate compliance procedures. Prompt public disclosure of precise information and an explanation regarding the violation shall be made, and responsibility for the violation shall be clarified. Strict and fair disciplinary action shall be taken, including with respect to senior management where necessary.

Established on October 1, 2003

Sustainability Strategy

Five New Material Issues to Be Solved Through Digital Transformation (DX)

The future is difficult to predict in a complex world characterized by population growth, developed countries with declining birthrates and aging populations, rapid digital transformation, greater use of biotechnology, multipolarity in international relations, and a worsening climate crisis. Given the uncertain future the world faces, Konica Minolta has decided to identify the social and environmental issues it must help address. While reaffirming its corporate DNA, the company clarified issues to be addressed by 2030, and then backcasted from that year to determine the targets it must tackle immediately.

After gaining insight into social and environmental issues expected to be critical by 2030 by examining the UN Sustainable Development Goals (SDGs) and macro trends, Konica Minolta conducted a materiality analysis from the perspectives of social issues that must be solved and Konica Minolta's business growth. This led to the identification of five new material issues for Konica Minolta to tackle starting in 2020: (1) improving fulfillment in work and corporate dynamism; (2) supporting healthy, high-quality living; (3) ensuring social safety and security; (4) addressing climate change; and (5) using limited resources effectively. For each of these issues, vision were also established, thereby clarifying Konica Minolta's medium and long-term directions for value creation.

These five material issues are linked to Konica Minolta's business growth strategy and are now the cornerstones for action in each business area. In alignment with the value creation process of each business unit, Konica Minolta will implement initiatives for both business growth and sustainability to create value for customers and the broader society.

Vision for 2030 and SDGs Related to Each Material Issue

Material issue	Vision for 2030	Related SDGs
 <p><u>Improving fulfillment in work and corporate dynamism</u></p>	Increase labor productivity for corporate clients, society, and Konica Minolta. Make time for creativity, and promote workplaces where all individuals can thrive.	       
 <p><u>Supporting healthy, high-quality living</u></p>	Promote health and high quality of life at corporate clients, in society, and Konica Minolta. Help individuals lead fulfilling lives.	  
 <p><u>Ensuring social safety and security</u></p>	Enhance safety and security in the workplaces of corporate clients and in society. Minimize risks posed by Konica Minolta products and services.	   
 <p><u>Addressing climate change</u></p>	Reduce CO ₂ emissions by Konica Minolta. Enhance CO ₂ emissions reduction at corporate clients and suppliers, and reduce the carbon footprint of society.	   
 <p><u>Using limited resources effectively</u></p>	Promote the effective use of resources at Konica Minolta, while also helping corporate clients and suppliers to achieve effective use.

▶ [Material Issue Evaluation and Identification Process](#)

Medium-Term Sustainability Strategy 2022

As the first step toward achieving its long-term vision, Konica Minolta established the medium-term business strategy "DX2022" in 2020. The DX2022 strategy aims to "leap to highly profitable businesses through DX," and "evolve into a company clearly committed to solving social issues" by 2022. Under the strategy, key performance indicators have been set to measure the creation of social and environmental value as well as economic value for each of the five material issues. By working to solve social and environmental issues, Konica Minolta can also foster its own growth.

Helping to Solve Social and Environmental Issues by Advancing Konica Minolta's Imaging IoT Technology and Combining It with Digital Technology

Today's increasingly urgent social and environmental issues can only be solved by innovation. By combining imaging IoT and digital technologies to "make the invisible visible," Konica Minolta will work to transform the workflows used in the workplace and contribute to society by making people's lives even more fulfilling.

Improving fulfillment in work and corporate dynamism

As work styles continue to diversify, we are providing solutions that increase productivity and make creativity-inspiring work styles possible in diverse locations — all the while supporting the human quest for purpose in life, improving fulfillment in work, and fostering corporate dynamism.

Supporting healthy, high-quality living

Konica Minolta is enhancing the diagnostic function of clinics and other neighborhood primary care settings by providing diagnostic imaging analysis technology that uses AI, and by supporting diagnosis through a network of specialists. In addition, the company is helping to make the workflow at nursing care facilities visible using image analysis and AI to reduce the burden on caregivers. By making it possible to provide more finely tuned nursing care services, Konica Minolta is also helping seniors to remain independent.

Ensuring social safety and security

Konica Minolta is providing solutions to enable non-contact and remote monitoring and inspection at factories and plants. By forecasting and predicting trouble or danger in ways that surpass the visual capabilities of frontline workers, the company aims to prevent accidents and ensure the safety and security of factories and surrounding communities.

Addressing climate change

Konica Minolta helps corporate clients in the commercial printing industry streamline their operations and reduce energy consumption. The company is providing solutions for transforming their workflow while enhancing their productivity, in addition to reducing its own CO₂ emissions.

Using limited resources effectively

Konica Minolta is contributing to reduced resource consumption by helping corporate clients in the commercial printing industry to shift to on-demand printing. This will eliminate the need for printing plates used in traditional offset printing and reduce customer process inventory.

Driving Drastic CO₂ Emissions Reduction with DX, to Achieve Carbon Minus by 2030 Instead of 2050

With the implementation of the new long-term vision and the DX2022 medium-term business strategy, Konica Minolta has decided to bring forward its goal to achieve Carbon Minus status to 2030. Utilizing digital transformation (DX) technologies, Konica Minolta will promote collaboration with even more corporate clients and business partners, taking on the challenge of broad-scope reduction in environmental impact.

In response to the material issues of addressing climate change and using limited resources effectively, Konica Minolta will help transform the socially conventional business model of mass production and disposal by facilitating the adoption of on-demand production, work style reform, and edge computing. It will foster the transition to a fully paperless world while helping to minimize energy use in the digital society.

One example of this is the digitization of its Green Supplier Activities, which provide business partners with Konica Minolta environmental expertise. Until recently, the company's specialists visited the factories of business partners to perform energy-saving diagnoses. By now, by digitizing and automating its diagnostic expertise, the company has developed a system that allows business partners to perform energy-saving diagnosis and implement measures on their own. Konica Minolta anticipates that this will dramatically expand the scope of its activities and further accelerate environmental impact and cost reduction. Another key initiative is the company's Environmental Digital Platform, launched in June 2020. This system helps to improve the efficiency of environmental management by allowing Konica Minolta and each participating company to share their knowledge and expertise in order to co-create new value. The platform has a place for participants to co-create solutions and a place to share and utilize proven solutions. Through these two digital spaces, Konica Minolta aims to help solve environmental issues on a global scale. The goal is to accelerate the resolution of environmental challenges through collaboration between companies, and to promote innovation through co-creation.

Material Issue Evaluation and Identification Process

Updating the Material Issues

The future is difficult to predict in a complex world characterized by population growth, developed countries with declining birthrates and aging populations, rapid digital transformation, greater use of biotechnology, multipolarity in international relations, and a worsening climate crisis. Given the uncertainty the world faces, Konica Minolta has decided to identify the social and environmental issues it must help address. While reaffirming its corporate DNA, the company clarified the issues to be addressed by 2030, and then backcasted from that year to determine the targets it must tackle immediately.

Konica Minolta believes that a sustainable and decentralized society with greater individual autonomy is on the horizon. When it arrives, organizations and individuals will be creating all kinds of value utilizing an explosively expanding amount of data. Along with greater prosperity based on individualization and diversification, countries will be able to solve many pressing social and environmental issues. Advanced technology will be required both for greater prosperity and to solve issues.

After gaining insight into social and environmental issues expected to be critical by 2030 by examining the UN Sustainable Development Goals (SDGs) and macro trends, Konica Minolta conducted a materiality analysis from the perspectives of social issues that must be solved and Konica Minolta's business growth. This led to the identification of five new material issues for Konica Minolta to tackle. By addressing these five material issues, Konica Minolta will support the human quest for purpose in life and contribute to global sustainability.

Evaluation and Identification Process

Step 1. Issue Awareness

First, Konica Minolta made a list of diverse environmental, social, and economic issues by referencing international frameworks and guidelines such as the GRI Standards and SDGs, as well as macro trends in each specialized field.

The list was prepared by referring to the Wedding Cake Model of the SDGs. This structural model was developed by the Stockholm Resilience Center* as a way to understand the SDGs, and it helps to clarify the relationships among the SDGs. With this model, the 17 goals are divided into three layered categories, like the tiers of a wedding cake. These tiers from bottom to top are biosphere, society and economy. The model illustrates that achieving the biosphere and society-related SDGs can help to build a sustainable economy and society, upon which companies can help build the foundation for a sustainable economy. With this relationship in mind, Konica Minolta identified the issues of greatest importance to its business.

During this identification process, Konica Minolta also considered social and environmental changes, regulatory and policy trends, and stakeholder requirements, all in light of the company's current and potential business areas as well as the corresponding supply and value chains.

※ [Stockholm Resilience Center](#) □

Frameworks and Guidelines referred to:

- GRI Standards
- Sustainability Accounting Standards Board (SASB)
- ISO 26000
- Sustainable Development Goals (SDGs)
- The Ten Principles of the UN Global Compact
- OECD Guidelines for Multinational Enterprises
- Task Force on Climate-related Financial Disclosure (TCFD)
- Macro trends in various climate change and other specialized fields (the Paris Agreement, the European circular economy, etc.)
- International Integrated Reporting Council (IIRC), International Integrated Reporting Framework
- Stockholm Resilience Center's Wedding Cake Model for the SDGs

Step 2. Issue Identification and Prioritization

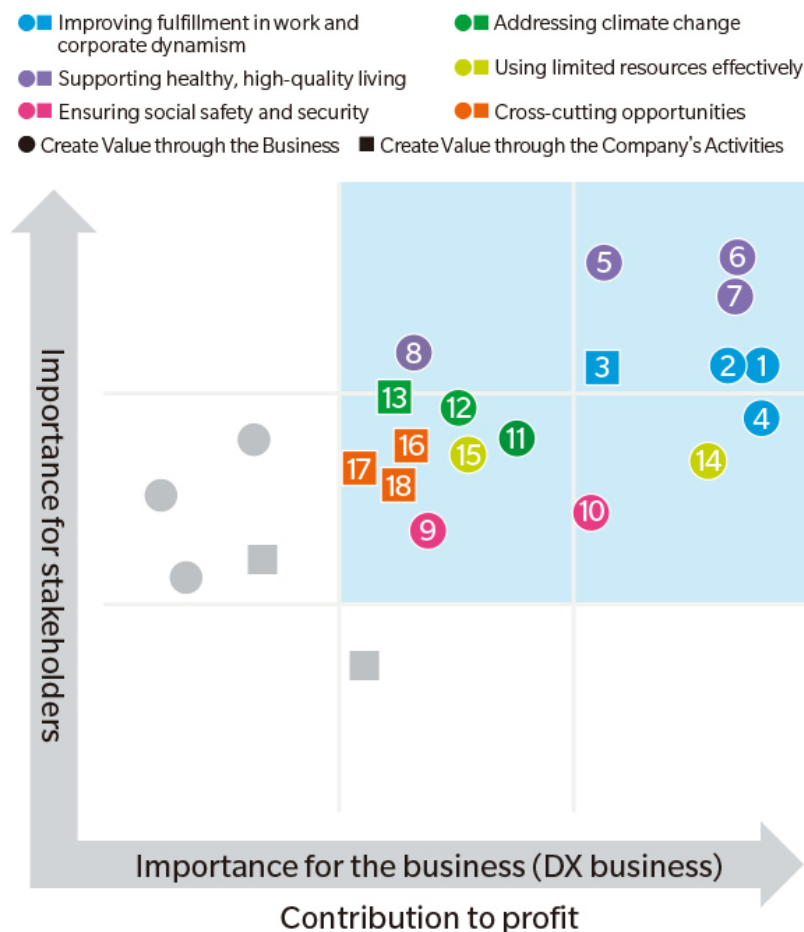

From the initial list of issues, Konica Minolta identified fields that are particularly relevant to its business, and then conducted a prioritization process.

Konica Minolta's materiality analysis is unique in that it assesses both risks and opportunities. By evaluating both these aspects, the company aims to fulfill expectations for enterprises to tackle the SDGs. The expectation is that companies treat social and environmental issues as opportunities to grow their businesses, while helping to solve the issues through their business activities.

In performing the materiality analysis, Konica Minolta evaluated and prioritized the issues based on the two perspectives of importance to stakeholders and importance to the business.

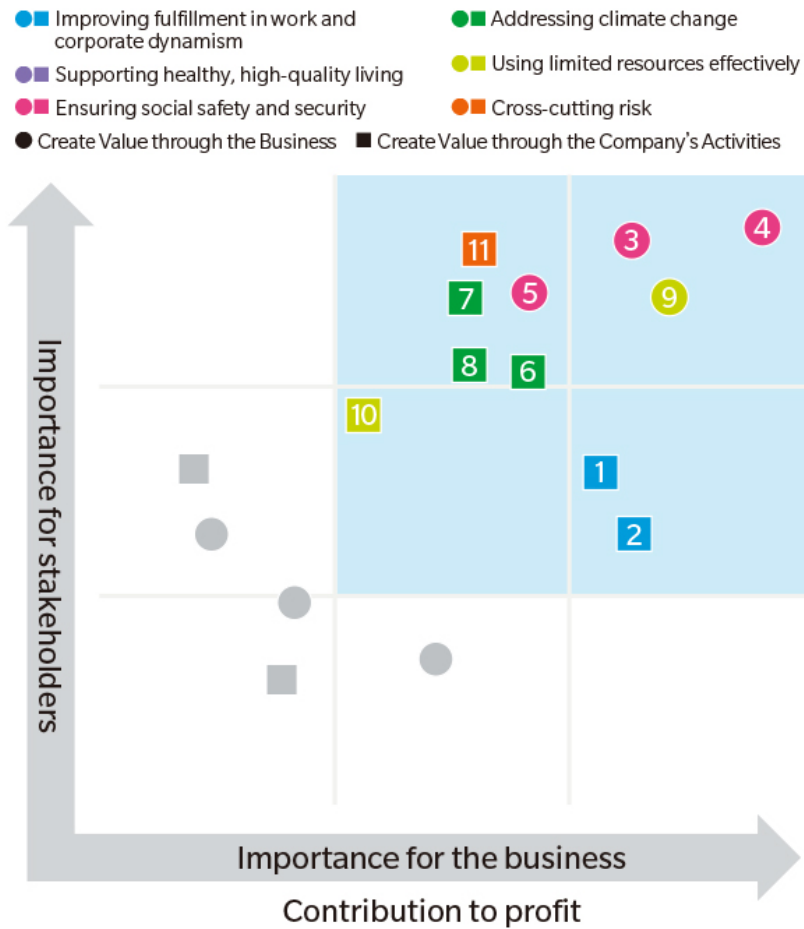

Customers, business partners, shareholders, investors, and employees were defined as part of the analysis. Importance to stakeholders was quantified by scoring each issue from one to five. To analyze financial impact and importance to the business, each issue was similarly scored based on the amount of potential earnings for opportunity issues, and the amount of potential loss for risk issues.

[Opportunities for Each Material Issue]

Improving fulfillment in work and corporate dynamism	① Improving productivity of customer organizations and increasing time for creativity by providing work-style solutions using digital technology
	② Improving productivity and enhancing workplace motivation in the supply chains of customer organizations by providing products and services that transform the workflows of frontline workers
	③ Realizing the full potential of human resources, who are the source of new value, and creating workplaces organizations where individuals thrive
	④ Eliminating labor shortages and strengthening cyber security by eliminating the gap in IT access faced by small and medium enterprises
Supporting healthy, high-quality living	⑤ Transforming caregiver workflow with imaging IoT-based systems and onsite consulting services, and creating a labor pool in the caregiving industry
	⑥ Promoting disease prevention and early detection by providing high value-added medical services, and reducing medical expenses
	⑦ Streamlining drug development by promoting innovation in drug discovery processes utilizing genetic testing technology
	⑧ Improving healthcare accessibility in developing countries
Ensuring social safety and security	⑨ Improving safety and security at client sites and for society by providing products and services such as gas leak monitoring services
	⑩ Supporting the quality produced by corporate clients by offering products and services that facilitate high-tech measurement and inspection
Addressing climate change	⑪ Reducing energy consumption and CO ₂ emissions of customers and society by providing manufacturing process solutions
	⑫ Promoting a paperless and ubiquitous computing society by providing solutions for work style reform
	⑬ Contributing to drastic CO ₂ emissions and cost reductions by helping business partners to reduce their environmental impact using DX technology
Using limited resources effectively	⑭ Constructing efficient supply chains for client companies using on-demand production
	⑮ Reducing workflow and supply chain loss for client companies
Cross-cutting opportunities	⑯ Fostering a corporate culture that encourages role models for the generation of SDG innovation
	⑰ Improving ESG relations with investors
	⑱ Enhancing customer relations by making the most of ESG initiatives

[Risks for Each Material Issue]

Improving fulfillment in work and corporate dynamism	1 Mismatches between employee skills and their work due to rapid changes in systems and environments
	2 Declines in employee diversity, independence, and ability to innovate due to stagnated efforts to create workplaces that promote diversity
Ensuring social safety and security	3 Loss of public confidence in the event of a product or service-related accident that results in death or injury to a user
	4 Loss of public confidence in the event of a serious information security accident related to a product or service, which results in a personal data leak or privacy infringement
	5 Impacts on operations and product shipments due to the use of substances that pollute ecosystems and pose human health hazards
Addressing climate change	6 Skyrocketing energy prices, increased material costs due to raw material shortages, and supply instability
	7 Greater use of paperless systems due to skyrocketing energy prices and raw material shortages
	8 Supply chain disruptions due to abnormal weather
Using limited resources effectively	9 Decline in competitiveness due to delayed participation in the circular economy
	10 Production or shipment delays due to water-related risks and water resource depletion
Cross-cutting risk	11 Decline in public confidence due to lack of governance at business partners

Step 3. Results Confirmation and Issue Identification

The Konica Minolta Group Executive for Corporate Sustainability, who chairs the Group Sustainability Promotion Committee, confirmed the appropriateness of the material issue evaluation process and the prioritized issues. The selected material issues were then discussed by senior management and approved by the Board of Directors. The process used to identify material issues is reviewed annually, which guarantees the validity of the issues selected and the corresponding plan.

Material Issue 1: Improving Fulfillment in Work and Corporate Dynamism

Background

Social and environmental issue outlook for 2030

Many economies around the world, including Japan, are expected to see labor shortages. As industrial structures change, there will be imbalances in the type of labor force needed. There will be labor shortages in some areas and more mismatches between the skills people have and the skills jobs require. By 2030, a total labor shortage of about 100 million people is anticipated in the countries that make up the top 70% of global GDP.

Many jobs will need to be performed using technologies such as robotics and automation. This will occur not just on the manufacturing floor, but in offices as well. While it is important to increase productivity with technology, human creativity must also be fostered to solve the global labor shortage.

Opportunities for Konica Minolta to create value, and risks to be minimized

Opportunities

- Through Konica Minolta businesses
 - Improving productivity of customer organizations and increasing time for creativity by providing work-style solutions using digital technology
 - Improving productivity and employee engagement in the supply chains of customer organizations by providing products and services that transform the workflows of frontline workers
 - Eliminating labor shortages and strengthening cyber security by eliminating the gap in IT access faced by small and medium enterprises
- Internal action to create value
 - Realizing the full potential of human resources, who are the source of new value, and creating organizations where individuals thrive

Risks

- Affecting Konica Minolta
 - Mismatches between employee skills and their work due to rapid changes in systems and environments
 - Declines in employee diversity, independence, and ability to innovate due to stagnated efforts to create workplaces that promote diversity

Vision for 2030 and Medium-Term Sustainability Strategy 2022

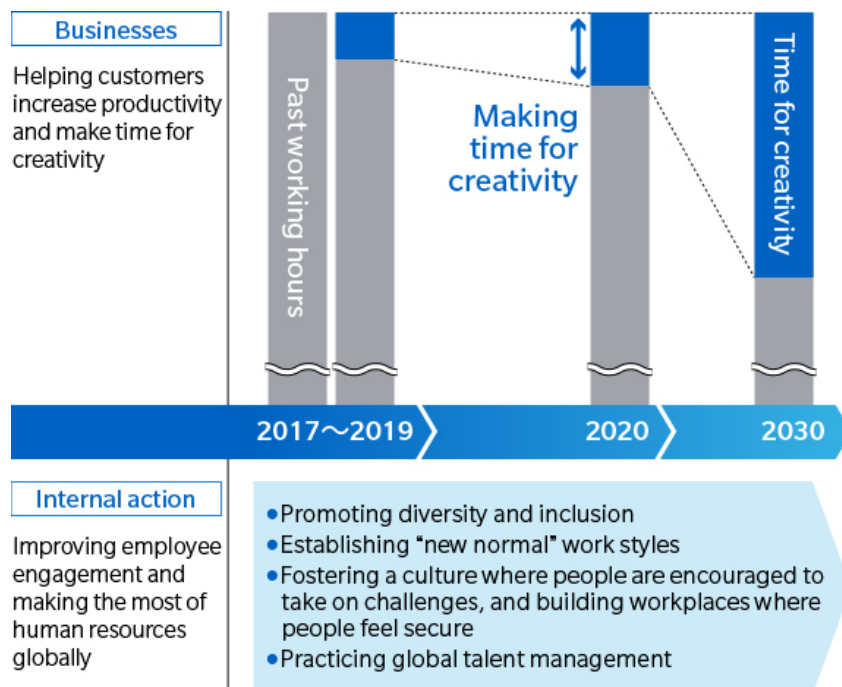

Medium-Term Sustainability Strategy 2022		Vision for 2030	Related SDGs
Businesses	Increasing customer productivity and making time for creativity	Increase labor productivity for corporate clients, society, and Konica Minolta. Make time for creativity, and promote workplaces where all individuals can thrive.	
Internal action	Improving employee engagement and making the most of human resources globally		

Konica Minolta's Approach

As work styles become more diversified, Konica Minolta looks to provide solutions that increase productivity and enable creativity-inspiring work styles in diverse locations, while enhancing personal motivation, fulfillment in work, and corporate growth. Specifically, by utilizing options like Intelligent Connected Workplaces,* on-demand production, imaging IoT, and reducing the amount of time spent on basic tasks, Konica Minolta is helping customers to improve their productivity and shift their focus to creative work. By combining imaging IoT and digital technologies, Konica Minolta can make the inefficiency hidden in a customer's workflow visible. Moreover, the company can take a close look at the customer's workflow and provide services tailored for its particular business. With these capabilities, Konica Minolta will help customers to increase productivity and make time for creativity, while also helping to minimize the disadvantages in terms of IT access, recruitment, and entrepreneurial opportunities.

At Konica Minolta itself, the emphasis will be on realizing the full potential of human resources and empowering individuals to thrive and produce new value. Konica Minolta will do this by developing workplaces and a corporate culture where individual employees can reach their full potential with a sense of personal motivation and engagement.

* Intelligent Connected Workplace: A smart work environment that connects people and information, and where value can be created by anyone, anytime, anywhere

Businesses: Increasing Customer Productivity and Making Time for Creativity

- Improving customer productivity and creativity through work style reform and decision-making support
 - › Supporting Customers to Digital Transformation - Workplace Hub
- Making time to provide care services by streamlining care staff workflow
 - › Providing Nursing Care Solutions to Address the Issues of a Super-Aged Society - HitomeQ Care Support
- Shortening lead time compared to conventional processes through on-demand production
 - › Using Digital Technology to Reduce the Environmental Impact of Commercial Printing - Digital Inkjet Printer AccurioJet KM-1
- Making time for creativity by automating the inspection process at production sites

Internal Action: Improving Employee Engagement and Making the Most of Human Resources Globally

- Promoting diversity and inclusion
 - › Supporting Women's Career Building
 - › Utilizing Employee Experiences Gained Outside the Company and Abroad
 - › Employment of People with Disabilities
- Establishing "new normal" work styles
- Fostering a culture where people are encouraged to take on challenges, and building workplaces where people feel secure
 - › Work-Style Reform
 - › Promoting Reform of Corporate Culture and Communication
 - › Developing Human Capital
- Practicing global talent management

Material Issue 2: Supporting healthy, high-quality living

Background

Social and environmental issue outlook for 2030

Due to population aging, the number of people suffering from diseases in developed countries is expected to grow. With a corresponding increase in the demand for medical treatment and nursing care, social security costs will also climb. In sparsely populated areas and developing countries, there are concerns that healthcare access could become difficult. In addition, the gap between supply and demand for nursing care in Japan is expected to grow to approximately 500,000 patients by 2030.* Similar issues are also anticipated in other developed countries in the near future.

As part of productivity and safety improvement at medical facilities and seniors care sites, the quality of and access to medical services need to be enhanced, and social security costs have to be reduced. This can be done through the prevention and early detection of disease. It can also be accomplished by shortening the development period for new drugs through improved candidate success rates and greater clinical trial efficiency.

* From a report released by Japan's Ministry of Economy, Trade and Industry on April 9, 2018: [Report compiled by the Study Group for Future Supply and Demand of Elderly Nursing Care Systems](#)

Opportunities for Konica Minolta to create value

Opportunities

■ Through Konica Minolta businesses

- Transforming care staff workflow with imaging IoT-based systems and onsite consulting services, and creating a labor pool in the nursing care industry
- Promoting disease prevention and early detection by providing high value-added medical services, and reducing medical expenses
- Streamlining drug development by fostering innovation in drug discovery processes utilizing genetic testing technology
- Improving healthcare accessibility in developing countries

■ Internal action to create value

- Building safe and comfortable workplaces where employees feel motivated

Vision for 2030 and Medium-Term Sustainability Strategy 2022

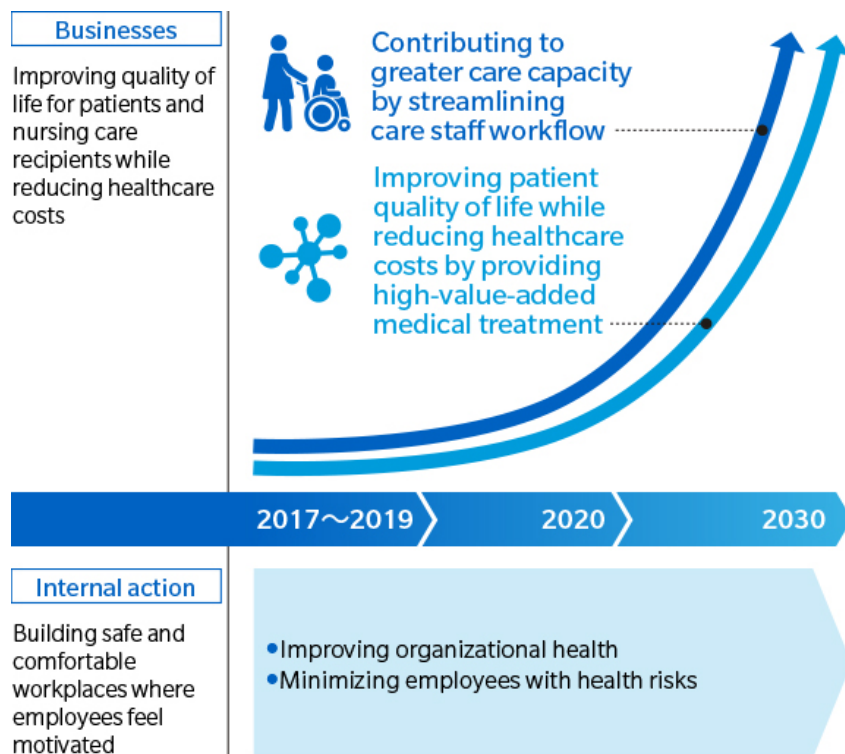

Medium-Term Sustainability Strategy 2022		Vision for 2030	Related SDGs
Businesses	Improving patient quality of life while reducing expenses	Promote health and high quality of life at corporate clients, in society, and Konica Minolta. Help individuals lead fulfilling lives.	
Internal action	Building safe and comfortable workplaces where employees feel motivated		

Konica Minolta's Approach

Konica Minolta will make the most of its proprietary genetic and dynamic testing technologies to improve healthcare access and help reduce social security costs. These technologies can help detect diseases early and reduce the risk of severe illness, thereby reducing treatment costs. In addition, the company will expand access to nursing care by providing solutions that streamline care staff workflow.

Konica Minolta possesses molecular level diagnostic technologies that can identify genes and proteins as well as dynamic diagnostic imaging technologies that can help pinpoint the cause of diseases. In addition, the company has the human resources and technical capabilities needed to visit care facilities in person to assess staff workflow and propose specific improvements. With these capabilities, Konica Minolta will contribute to improved treatment and facilitate the creation of even more effective medicines, thereby enhancing people's quality of life while helping to lower healthcare costs.

At Konica Minolta itself, the aims will be to foster employees' engagement with their own physical and mental health and promote more advanced health management by building a health-first corporate culture.

Businesses: Improving Patient Quality of Life While Reducing Expenses

- Improving patient quality of life while reducing healthcare costs by providing high-value-added medical treatment
 - › Supporting Drug Discovery as Well as Accurate and Efficient Cancer Diagnosis — Precision Medicine
 - › Addressing Medical Challenges in Emerging Countries with Remote Healthcare — Remote Healthcare Using Portable Medical Devices
- Expanding care capacity by streamlining care staff workflow
 - › Providing Nursing Care Solutions to Address the Issues of a Super-Aged Society — HitomeQ Care Support

Internal Action: Building Safe and Comfortable Workplaces Where Employees Feel Motivated

- Promoting health-oriented business administration
 - › Initiatives to Increase the Health of Employees
 - › Managing Occupational Safety and Health

Material Issue 3: Ensuring Social Safety and Security

Background

Social and environmental issue outlook for 2030

Cyber-attacks have become increasingly frequent and sophisticated. The unprecedented damage they have caused is estimated at as much as 90 trillion dollars* worldwide. Societies also need to respond to risks such as urban crime, natural disasters, pandemics and food insecurity, which all threaten people's work and livelihoods.

To make society safer and more security, it is vital to visualize dangers to social infrastructure and workplaces, as well as information security risks, and to improve the inspection of products and services that contribute to people's work and livelihoods.

* Source: [Zurich Insurance Group and the Atlantic Council, 2015](#)

Opportunities for Konica Minolta to create value, and risks to be minimized

Opportunities

- Through Konica Minolta businesses
 - Improving safety and security at client sites and for society by providing products and services such as those that make gas leaks visible
 - Supporting the quality produced by corporate clients by offering products and services that facilitate high-tech measurement and inspection

Risks

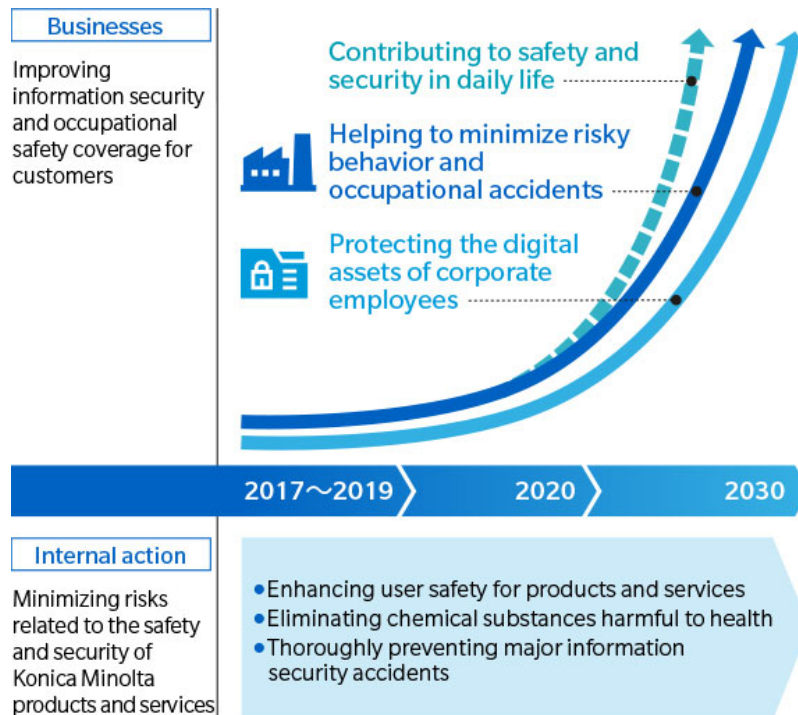

- Affecting Konica Minolta
 - Loss of public confidence in the event of a product or service-related accident that results in death or injury to a user
 - Public disapproval in the event of a serious information security accident related to a product or service, which results in a personal data leak or privacy infringement
 - Impacts on operations and product shipments due to the use of substances that pollute ecosystems and pose human health hazards

Vision for 2030 and Medium-Term Sustainability Strategy 2022

Medium-Term Sustainability Strategy 2022		Vision for 2030	Related SDGs
Businesses	Enhancing information security and occupational safety for corporate clients	Enhance safety and security in the workplaces of corporate clients and in society. Minimize risks posed by Konica Minolta products and services.	
Internal action	Minimizing risks related to the safety and security of Konica Minolta products and services		

Konica Minolta's Approach

Konica Minolta will identify both cyber and physical security risks, provide solutions that help create secure environments, and contribute to safety and security in society. Specifically, the company will work to provide connected workplaces that ensure a high degree of information security, while also offering workplace risk identification solutions using imaging IoT technology. Konica Minolta possesses proprietary technologies in the fields of optical and image processing, as well as analysis and imaging AI technologies. It is also deeply involved in the main processes at each stage of the supply and value chains for various industries. Using the valuable information it has accumulated through these activities, Konica Minolta is able to offer solutions that help customers to raise product quality and enhance safety and security in the workplace, while driving innovation across various industries. With the technology to visually detect changes and warning signs invisible to the human eye, the company will continue providing new value in areas such as public security, factory safety, and product inspection. As a manufacturer, Konica Minolta also evaluates all risks at each stage of its product and service life cycles, and works to minimize information security risks and health problems.

Businesses: Enhancing Information Security and Occupational Safety for Corporate Clients

- Providing solutions that help improve information security for customers
- Providing occupational safety management solutions
- Advancing into quality inspection and other monitoring related to safety and security
 - Contributing to Safety and Security as well as Environment-friendly Operation by Visualizing Gas Leaks — Gas Monitoring Solution

Internal Action: Minimizing Risks Related to the Safety and Security of Konica Minolta Products and Services

- Enhancing user safety for products and services
 - Achieving Top-Tier Quality and Reliability
- Eliminating chemical substances harmful to health
 - Management of Chemical Substances in Products
 - Reduction of Chemical Substances Risks in Production
- Thoroughly preventing major information security accidents
 - Enhancing the Security of Products and Services
 - Information Security

Material Issue 4: Addressing Climate Change

Background

Social and environmental issue outlook for 2030

The Paris Agreement provides a framework for the world to move more quickly and ambitiously to build a low-carbon global society. At the same time, there are concerns that the needed changes will not happen fast enough and climate change will have a harsh impact on the world. If and when the low-carbon society is achieved, the energy structure of entire industries will have changed significantly, including the widespread use of renewable energy and dramatic energy savings. On the other hand, if dire climate change predictions materialize, rising sea levels will submerge coastlines and damage biodiversity. There will likely also be frequent severe weather events, such as typhoons and hurricanes, which could have a significant impact on both industry and people's lives.

In order to transition to a low-carbon global society, there needs to be a fundamental change in how energy is used, which means conventional workflows must be dramatically reformed. In addition, it is vital to build an industrial structure that can withstand severe weather events in case dire climate change predictions materialize.

Opportunities for Konica Minolta to create value, and risks to be minimized

Opportunities

- Through Konica Minolta businesses
 - Reducing energy consumption and CO₂ emissions of customers and society by providing manufacturing process solutions
 - Promoting a paperless and ubiquitous computing society by providing solutions for work style reform
- Internal action to create value
 - Contributing to dramatic CO₂ emissions and cost reductions by helping business partners to reduce their environmental impact using DX technology

Risks

- Affecting Konica Minolta
 - Soaring energy prices, increased material costs due to raw material shortages, and supply instability
 - Greater use of paperless systems due to rising energy prices and raw material shortages
 - Supply chain disruptions due to abnormal weather

Vision for 2030 and Medium-Term Sustainability Strategy 2022

Medium-Term Sustainability Strategy 2022		Vision for 2030	Related SDGs
Businesses	Reducing energy usage and CO ₂ emissions by transforming customer processes	Reduce CO ₂ emissions by Konica Minolta. Enhance CO ₂ emissions reduction at corporate clients and suppliers, and reduce the carbon footprint of society.	   
Internal action	Energy usage and CO ₂ emissions reduction related to Konica Minolta sites, business partners, products and services		

Konica Minolta's Approach

Konica Minolta has decided — with the implementation of its new long-term management vision and DX2022 medium-term business strategy — to bring forward its goal to achieve “Carbon Minus” status from 2050 to 2030.

Konica Minolta will help transform the conventional business model of mass production and disposal by supporting clients with on-demand production, work style reform, edge computing, and other efforts. It will also promote the transition to a fully paperless world, while helping to minimize energy use in the digital society.

Leveraging digital transformation (DX) technologies, Konica Minolta will pursue collaboration with even more corporate clients and business partners, taking on the challenge of promoting broad-scale environmental impact reduction. The company aims to achieve sustainable growth dramatically expanding its contribution to the reduction of environmental impact while improving financial performance. This will be done by digitizing the Green Supplier Activities that provide business partners with Konica Minolta environmental expertise, and by promoting the Environmental Digital Platform launched in June 2020.

Businesses: Reducing Energy Usage and CO₂ Emissions by Transforming Customer Processes

- Reducing energy usage and CO₂ emissions in customer business processes through on-demand printing and production
 - › Using Digital Technology to Reduce the Environmental Impact of Commercial Printing — Digital Inkjet Printer AccurioJet KM-1
- Streamlining gas leak inspection work and compliance activities related to global warming prevention regulations
 - › Contributing to Safety and Security as well as Environment-friendly Operation by Visualizing Gas Leaks — Gas Monitoring Solution
- Streamlining customer workflow and reducing supply chain loss through process technology that makes the most of materials
- Collaborating with customers globally through the Environmental Digital Platform, a DX-based ecosystem
 - › Supporting Customers to Solve Their Environmental Issues

Internal Action: Energy Usage and CO₂ Emissions Reduction Related to Konica Minolta Sites, Business Partners, Products and Services

- Reducing environmental impact and costs at Konica Minolta sites
 - › Excellent Green Factory Certification System
 - › Saving Energy and Preventing Global Warming in Production Operations
- Reducing environmental impact and costs at business partners using DX
 - › Green Supplier Activities
- Reducing the environmental impact of products

Material Issue 5: Using Limited Resources Effectively

Background

Social and environmental issue outlook for 2030

Given the world's growing population and the growing rate of resource consumption, it is estimated that the equivalent of two earths will be needed by 2030. In order to make more effective use of limited resources, companies need not only to recover and recycle waste, but also to reduce the volume of resources wasted.

This means that drastic workflow innovations are required, such as using on-demand production and IoT technology, to reduce resource waste in the supply chain. Circular economies also need to be created by developing material technologies that facilitate recycling, while building better networks for recovering used resources.

Opportunities for Konica Minolta to create value, and risks to be minimized

Opportunities

- Through Konica Minolta businesses
 - Constructing efficient supply chains for client companies using on-demand production
 - Reducing workflow and supply chain loss for corporate clients

Risks

- Affecting Konica Minolta
 - Decline in competitiveness due to delayed participation in the circular economy
 - Production or shipment delays due to water-related risks and water resource depletion

Vision for 2030 and Medium-Term Sustainability Strategy 2022

Medium-Term Sustainability Strategy 2022		Vision for 2030	Related SDGs
Businesses	Effective use of resources by transforming customer business processes	Promote the effective use of resources at Konica Minolta, while also helping corporate clients and suppliers to achieve effective use.	
Internal action	Effective use of resources relating to Konica Minolta sites, suppliers, products and services		

Material Issue in Medium-Term Business Plan SHINKA 2019

Process for Identifying Material Issues

The companies of today must address a wide range of social issues, including human rights, labor ethics, and environmental challenges such as climate change and resource depletion. In light of the changing social landscape and business environment, Konica Minolta identifies material issues to address with priority, with the aim of ensuring that its initiatives function with a balance between social issues and business objectives.

To identify material issues, first a comprehensive list of issues was created with reference to international guidelines. These issues were given a quantitative rating for two aspects, "stakeholder interest" (materiality to stakeholders) and "impact on the Group's business" (materiality to the company's business), to verify their materiality. Outside experts were asked for their opinions in order to incorporate objectivity into the decisions on the materiality of each issue, which were validated by a meeting attended by executive officers, thereby completing the process for identifying material issues.

Targets and action plans will be established in accordance with these material issues, and action will be taken. This approach will help to ensure that Konica Minolta contributes to the resolution of social challenges, thereby enhancing its competitiveness as a company.

Identification of Material Issues

Material Issues	Key Action	Boundary	Corresponding GRI Standards
1 Environment	<ul style="list-style-type: none"> Green Products Green Factory Green Marketing 	<ul style="list-style-type: none"> Group Business Partners Customers 	<ul style="list-style-type: none"> Materials Energy Emissions to Air Supplier Environmental Assessment

Targets and Results Regarding Social Impact

Social Innovation

Key Action	Fiscal 2019 Targets	Fiscal 2019 Results
Business development that contributes solutions to social issues	<ul style="list-style-type: none"> Promote new business development through core technologies and open innovation Promote business development at the company's five Business Innovation Centers (BICs) Continue to survey nursing care staff about satisfaction with Care Support Solutions and implement improvements for any issues identified 	<ul style="list-style-type: none"> Brought to market hybrid multilingual interpretation service, KOTOBAL, which was developed in Japan in October Conducted satisfaction survey of existing customers and revamped the entire service to create HitomeQ Care Support, with the addition of consulting based on identified issues

Customer Satisfaction and Product Safety

Key Action	Fiscal 2019 Targets	Fiscal 2019 Results
Achieving top-tier quality and reliability Enhancing the Security of Products and Services	<ul style="list-style-type: none"> ● Number of serious product-related accidents*1: 0 ● Number of serious security incidents*2 in the service business area: 0 	<ul style="list-style-type: none"> ● Number of serious product-related accidents*1: 0 ● Number of serious security incidents*2 in the service business area: 0
Creating new quality value	<ul style="list-style-type: none"> ● Continue conducting satisfaction surveys and implement improvements based on the results ● Construct verification processes for customer value creation using design thinking 	<ul style="list-style-type: none"> ● Customer satisfaction surveys conducted according to the characteristics of each business area and improvements made on issues ● Constructed and deployed customer value verification processes in the business divisions

*1 Serious product-related accidents refer to those accidents that cause serious harm to the product user's life and/or body and accidents that cause serious damage to assets other than the product.

*2 Serious security incidents refer to those product-security incidents that cause serious and significant harm to the product user's business.

Responsible Supply Chain

Key Action	Fiscal 2019 Targets	Fiscal 2019 Results
Promoting CSR in the supply chain	CSR procurement (FY2017 to FY2019) <ul style="list-style-type: none"> ● Request that suppliers carry out CSR activities: 100% implementation ● CSR assessment: Complete assessments of all Group production sites and approximately 120 important suppliers ● CSR audit: Complete audits of two important Group production sites and two important suppliers 	CSR procurement <ul style="list-style-type: none"> ● Requested that suppliers carry out CSR activities: 100% implementation ● CSR assessment: Completed assessment of 2 Group production sites and 41 important suppliers ● CSR audit: Conducted an audit of one particularly important supplier
	Response to conflict mineral issues (FY2017 to FY2019) <ul style="list-style-type: none"> ● Supplier response rate to conflict mineral surveys: Maintaining 95% or higher ● Respond to customers' requests for surveys: 100% 	Response to conflict mineral issues <ul style="list-style-type: none"> ● Supplier response rate to conflict mineral surveys: 95% ● Responded to customers' requests for surveys: 100%

Human Capital

Key Action	Fiscal 2019 Targets	Fiscal 2019 Results
Work-style reform	<ul style="list-style-type: none"> ● Prepare operational and workplace environments ● Make the most of diverse human resources ● Enhance efficiency using RPA*3: Save approximately 28,000 hours*4 	<ul style="list-style-type: none"> ● Improving business and workplace environments: Constructed a new building in Takatsuki as a development base for imaging IoT and AI technologies ● Utilizing diverse human resources: Began making management appointments not based on age ● Enhanced efficiency using RPA*3: Saved approximately 31,500 hours
Developing human capital	<ul style="list-style-type: none"> ● Expand the pool of executive candidates who can lead the organization's global transformation into a digital company with insight into implicit challenges, and accelerate training (Global E-Juku, and Global Assignment Program for early career talent) ● Create a corporate culture and systems to promote organizations full of "business athletes" who can compete globally (develop KIZUKI workshops) 	<ul style="list-style-type: none"> ● Implemented Global E-Juku: 18 participants (10 from Japan, 8 from outside Japan) ● Offered Global Assignment Program for early career talent in Japan: Total of 98 participants since FY2017 ● Held KIZUKI workshops (16 sessions, total of 326 participants)
Occupational safety and health	<ul style="list-style-type: none"> ● Serious accidents*4: 0 ● Frequency rate of accidents causing absence from work*5: 0.1 or less ● Improve health and safety management capability using Konica Minolta's original indicator Unsafety Marks*6 ● Advance comprehensive risk management that broadly minimizes equipment, materials, operation and work environment risks ● Enhance the safety culture: Top management involvement in safety promotion, workplace safety management, and individual safety awareness improvement 	<ul style="list-style-type: none"> ● Serious accidents*5: 0 ● Frequency rate of accidents causing absence from work*6: Japan, 0.23; Overseas, 0.23 ● According to Konica Minolta's original safety management indicator Unsafety Marks*7, a 27% reduction was achieved compared to the yearly average for fiscal 2014–2016 ● Provided e-Learning to increase safety awareness to 12,000 people a month (all employees of Konica Minolta, Inc. and employees of Group companies in Japan), with about 86% taking the training
Improving employee health	<ul style="list-style-type: none"> ● Curb the number of absences due to illness (Konica Minolta, Inc.) Number of absences due to illnesses: 25 or less (as of April 1, 2020) ● Reduce the number of employees with health risks (Konica Minolta, Inc.) (1) People with high physical health risk: Reduced by 5% from fiscal 2018 (2) Persons needing specified health guidance (persons needing active support): Reduced by 3% from fiscal 2018 	<ul style="list-style-type: none"> ● Curbed the number of absences due to illness (Konica Minolta, Inc.) Number of absences due to illnesses: 25 (as of April 1, 2019) ● Reduced the number of employees with health risks (Konica Minolta, Inc.) (1) Employees with physical health risks: Down 5.4% from FY2018 (2) Employees needing specified health guidance (persons needing active support): Down 3.5% from FY2018

*3 RPA (Robotic Process Automation): Automating routine business processes on a personal computer

*4 Due to updating of the promotion plan, the target for the period was revised from 33,000 hours

*5 Serious accidents: (1) Death, disease requiring a long recovery period (or the possibility thereof), an injury resulting in a disability (or the possibility thereof), or a specific contagious disease;
(2) an accident resulting in the death or injury of three or more workers during work at one point or the contraction of a disease (including accidents not accompanied by lost worktime)

*6 Frequency rate of accidents causing absence from work: The number of persons absent from work per one million total actual working hours for current employees

*7 Unsafety Marks: Numerical values obtained by assigning points based on the number, type and severity of accidents that occur in a workplace

Diversity

Key Action	Fiscal 2019 Targets	Fiscal 2019 Results
Supporting women's career advancement	<ul style="list-style-type: none"> ● Foster awareness and a culture supportive of diversity, with a focus on promoting participation by women ● Consider ways of supporting life events affecting both men and women, such as childbirth, child-rearing and caretaking, and consider work styles tailored to these life events ● Appoint female managers (target for fiscal 2019: Women hold 7% of all management positions) ● Raise the percentage of women among new graduate hires (30% or more) 	<ul style="list-style-type: none"> ● Women held 6.9% of all management positions (as of April 2020) ● Percentage of women among new graduate hires: 36% (fiscal 2019)
Utilizing employee experiences gained outside the company and abroad	<ul style="list-style-type: none"> ● Active recruitment of mid career human resources and personnel from outside of Japan ● Provide opportunities to gain experience and knowledge outside of the company ● Promote exchanges among employees globally and provide venues for innovation creation where diverse employees can inspire and learn from each other 	<ul style="list-style-type: none"> ● Percentage of non-Japanese nationals among new employees hired by Konica Minolta, Inc.: 10 % (April 2020) ● Percentage of mid-career hires among total recruitment: 40% (Konica Minolta, Inc.) ● Providing opportunities to gain experience and knowledge outside the company: Expanded self-development support system ● Providing an innovation creation space to allow global human resources to interact, inspire, and learn from one another: Launched an initiative to create and accelerate innovation, focused on sales companies in the Europe and Asia Pacific regions

Environmental Report

Environmental Policy, Vision, and Strategy

[▶ Konica Minolta Environmental Policy](#)

[▶ Eco Vision 2050](#)

Konica Minolta's Environmental Policy is to integrate environmental, economic, and social perspectives into its business strategies, and to carry out corporate operations that are in harmony with people and the environment in every aspect of the company's operations.

[▶ Environmental Targets and Results](#)

Konica Minolta Environmental Policy

The Konica Minolta Group aims to promote sustainable development and profitable growth. We integrate environmental, economic and social perspectives into our business strategies so that our business activities are implemented in harmony with human lives and with the environment in all aspects.

Our concept is to make steady progress toward resolution of environmental challenges based on quantitative measurement and analysis of reliable data in regard to environmental performance and impact. This basic concept is demonstrated in the following affirmation:

"Management Based On Facts"

1. Working toward a sustainable society as a global citizen

In response to the call for a sustainable society, we will conduct business activities from the perspective of on-going enhancement of performance in environmental preservation, economic growth and social responsibilities (ethics). Every one of us will enhance its knowledge and awareness on the environment, economies and societies on a global scale and act with responsibility in pursuit of a sustainable society.

2. Compliance with laws and other requirements

We will comply with legal requirements in respective countries and regions, as well as our Group standards. In addition, we will respect, in an equitable manner, expectations of our stakeholders and consensus in the international community.

3. Consideration for the environment throughout the entire life cycle of products and services

We are committed to reducing the environmental load in all stages throughout the entire life cycle of products and services, recognizing that responsibility for a product rests with its manufacture.

4. Initiatives to counter global warming

We will continuously reduce greenhouse gas emissions that derive from our business activities from the perspective of the life cycle of our products and services throughout the entire Group, recognizing that global warming is one of the most important world issues.

5. Initiatives toward a recycling-oriented society

We are always reviewing what we can do as a corporate citizen in order to create recycling-oriented society while striving for minimizing consumption of natural resources and promoting "Zero Waste Emission" activities. In addition, we will accelerate initiatives for the recovery and recycling of end-of-life products and packaging materials.

6. Prevention of chemical pollution and minimization of potential risks to the environment

We will take every countermeasure for preventing chemical pollutions, recognizing that chemical substances can impose significant impact on human health and safety and the environment. At the same time, we will continuously suppress use of chemicals and reduce discharge volume in order to minimize environmental risks.

7. Promotion of information disclosure

We will execute accountability to all the stakeholders by actively disclosing environmental information and ensuring risk communication. We will as well make every effort to accomplish our commitment to the societies. Our Environmental Policy is to be disclosed to the public.

8. Establishment of environmental objectives and targets

We establish and administer environmental objectives, targets, and management programs to translate this Environmental Policy into reality. We will continuously review such objectives, targets and programs for further improvement of our environmental performance.

April 1, 2014
Konica Minolta, Inc.
President and CEO

Shohei Yamana

In order for a company to grow sustainably in the future, it is essential not only to pursue economic value but also to address important issues facing society including environmental problems. Based on the environmental policy, Konica Minolta will continue to reduce environmental impact across the whole product lifecycle, from product development through procurement, manufacturing, distribution, sales, customer service and recycling, under the philosophy of "The Creation of New Value." In the product lifecycle, we will expand our business by M & A and enter new projects in our business activities, including suppliers, outsourcing partners and customers.

Eco Vision 2050

Long-Term Environmental Target Eco Vision 2050: Moving Forward with Carbon Minus Goals for 2030

Given the urgency of global environmental issues, global businesses have a great responsibility to help build a more sustainable society by reducing environmental impact.

With Eco Vision 2050, Konica Minolta exemplifies its determination to fulfill its long-term environmental responsibilities. The company is taking a series of actions to achieve "Carbon Minus" status.

In 2008, the Board of Directors approved Eco Vision 2050, Konica Minolta's long-term environmental vision. The vision set the challenging goal of reducing CO₂ emissions from products throughout their entire lifecycle by 80% by 2050, compared to fiscal 2005 levels. In 2017, the issue of climate change was identified as an opportunity, and the company added a commitment to achieve Carbon Minus status across its business activities and deliver a net reduction in CO₂ emissions for society. To meet these goals, Konica Minolta is working hard to reduce emissions reduction throughout its supply chain.

Konica Minolta engages stakeholders such as business partners, customers, and local communities in its effort to achieve Carbon Minus status, which means ensuring that CO₂ emission reductions are greater than product lifecycle emissions of own products. Utilizing its own technology and expertise, Konica Minolta is working with stakeholders to reduce CO₂ emissions. If a total reduction effect can be achieved that exceeds the CO₂ emissions of Konica Minolta's business activities, then these efforts will help lower the CO₂ emissions of society as a whole.

In 2020, Konica Minolta made an additional commitment to achieve Carbon Minus status ahead of schedule, by 2030 instead of 2050.

Eco Vision 2050

1. Reduce CO₂ emissions throughout the product lifecycle by 80% by 2050, compared to fiscal 2005 levels.
 2030 Goals
 Reduce CO₂ emissions throughout the product lifecycle by 60% by 2030, compared to fiscal 2005 levels. Also, through cooperation with stakeholders, achieve CO₂ emission reductions greater than product lifecycle emissions, and realize Carbon Minus status.
2. Promote recycling and effective use of Earth's limited resources
3. Work to promote restoration and preservation of biodiversity

Carbon Minus by 2030 (instead of 2050)

Responding to the Task Force on Climate-related Financial Disclosures (TCFD)

The Task Force on Climate-related Financial Disclosures (TCFD), established by the G20 Financial Stability Board (FSB), released its final report, entitled “Recommendations of the Task Force on Climate-related Financial Disclosures,” in June 2017.

Konica Minolta believes that accurately assessing the risks and opportunities related to climate in its business operations and actively disclosing information to investors and a wide range of other stakeholders is essential for a company capable of sustainable growth. Being one of the supporters of the TCFD, Konica Minolta agreed to support the final report. The Group will disclose its climate change initiatives using the TCFD framework.

Corporate Governance

Konica Minolta recognizes that global warming is a serious risk for companies and, as a result, in 2008 the Board of Directors approved Eco Vision 2050, the company’s long-term environmental vision. This plan sets the ambitious target of reducing CO₂ emissions throughout the product lifecycle by 80% by 2050, compared to fiscal 2005 levels. In 2017 the issue of climate change was identified as an opportunity, and the company added a commitment to achieve Carbon Minus status through its business activities and deliver a net reduction in CO₂ emissions for society. In 2020, the Board of Directors revised this commitment, mandating achievement of Carbon Minus status by 2030 instead of 2050. The company will now implement business strategy and environmental (sustainability) management in a more integrated way.

At Konica Minolta, the President and CEO is tasked with the ultimate responsibility and authority for addressing climate change issues and is also responsible for the effectiveness of the company’s environmental management, including climate change initiatives. The actual environmental management activities are executed by the Group Sustainability Officer appointed by the President to be responsible for sustainability, including environmental measures.

The Group Sustainability Officer formulates a medium-term plan for sustainability, which is then approved by the Board of Directors as a corporate management plan. The Group Sustainability Officer reports monthly to the President and the Audit Committee established by the Board of Directors to report progress made on environmental management and on issues including climate change.

▶ [Click here for more information on Environmental Management \(Environmental Activities > Environmental Management at Konica Minolta > Management System\)](#)

Strategy

As climate change predictions materialize and the global environment continues to substantially change, there will likely be major social, economic and financial disruptions. Konica Minolta recognizes these to be significant risks to its business. At the same time, the company believes that, by helping to solve environmental issues through business activities, opportunities can be created that will promote the sustainable growth of the Group.

Over the long term, it will be necessary to replace fossil resources and fuels in manufacturing processes, and to respond to shortages of natural resources caused by changes in climate patterns. In the short and medium terms, a variety of challenges can be expected, including rising prices for fossil resources, tightening of regulations, stronger requirements for renewable energy, disruption of supply chains due to extreme weather, and widespread adoption of paperless measures.

By doing nothing, Konica Minolta could be faced with a need for additional capital investment, cost increases, and loss of business opportunities. By actively incorporating cutting-edge technology and combining it with the company’s strengths in digital input and output technology, Konica Minolta is transforming itself into a digital company with insight into implicit challenges.

Under Konica Minolta’s sustainability strategy, which forms the core of its long-term management vision, addressing climate change has been identified as a material issue and achievement of Carbon Minus status has been set as the objective. Medium-term sustainability targets and annual plans have been formulated in connection with this strategy. They are linked to medium-term business plans such as those for product planning and development, production and procurement, and sales. The aim is to achieve Carbon Minus status through business activities.

For example, the environmental impact of the manufacturing industry can be reduced by eliminating unnecessary production, transportation, inventory, and disposal. Konica Minolta believes that it is helping to solve this issue by providing on-demand equipment for industrial printing of things such as packaging, labels, and textiles.

Paper consumption is an issue in offices, but by providing digital workplace solutions that improve workflow efficiency, and solutions to support work style innovation such as telework, energy and paper consumption can be reduced.

Big data analysis consumes enormous amounts of energy, but Konica Minolta believes that its edge-computing technology can reduce energy consumption for society as a whole by offering efficient on-site data processing without the need for a large data center.

Konica Minolta is supporting drug discovery and testing with its genetic analysis technology. This can help prevent infectious disease outbreaks, which are of particular concern due to the effects of climate change.

In healthcare settings, Konica Minolta can facilitate diagnosis using imaging IoT technology and DX solutions that lighten the workload of medical practitioners.

For more information on these risks and opportunities, see "[Konica Minolta's Climate-Related Risks and Opportunities.](#)"

› [Click here for more information on the Medium-Term Environmental Plan \(Environmental Activities > Environmental Policy, Vision, and Strategy > Environmental Targets and Results\)](#)

Risk Management

Konica Minolta sees risk as uncertainty that could affect the organization's profitability. It approaches risk not only from the negative perspective, but also from the positive one. By addressing risk as an opportunity, Konica Minolta carries out risk management in a way that can maximize returns while minimizing negative impacts.

Looking at the medium and long term, the Group identifies important material issues that need to be prioritized in order to achieve initiatives that more actively incorporate social issues into business activities. Using international guidelines, the Group has created a comprehensive list of material issues based on changes in society and the business environment.

The issues are quantitatively evaluated from two angles: materiality to stakeholders and materiality to the company's business. In order to incorporate an objective perspective, outside experts are consulted and the validity of the material issues are verified at meetings with executive officers. Under Konica Minolta's sustainability strategy, which forms the core of its long-term management vision, addressing climate change is identified as one of the material issues.

The identified climate change risks are evaluated in terms of both uncertainty and the degree of impact for two scenarios: achievement of a low-carbon society and a world substantially altered by climate change. Risks quantitatively evaluated to be of high importance are positioned as important issues in the medium-term plan linked to the sustainability strategy, and medium-term targets and annual plans are formulated. Targets are managed on a quarterly basis by the Group Sustainability Promotion Committee, and new issues and additional measures are discussed.

Plan progress is reported monthly by the Group Sustainability Officer to the President. Ongoing review of the degree of risk change is performed twice a year at the committee meetings, and risks are repeatedly identified and evaluated. In fiscal 2019, a new climate-related environmental regulation was identified and incorporated into the sustainability medium-term plan. Plan-do-check-act (PDCA) cycles are being performed for this risk every quarter.

Environmental risks including climate change are categorized as short or medium-term management risks for the entire Group. They are handled by the Risk Management Committee, chaired by an executive officer appointed by the Board of Directors. This committee identifies relevant risks through risk assessment of corporate activities, determines overall risks, and evaluates their likelihood and potential level of impact on the business. Based on this, there is a system to ensure the formulation and execution of measures for risks deemed important, according to their priority, and to monitor and review the progress of those measures on a quarterly and monthly basis.

Risk identification through risk assessment involves risks put forward by a team of environmental law specialists, as well as new issues that are submitted by production, procurement, and development sites. The Risk Management Committee confirms the identified risks and necessary measures to minimize them. It also confirms and reviews whether the risk management system is functioning effectively. The findings of the Risk Management Committee are regularly reported to the Audit Committee, which consists of directors who are not also serving as executive officers.

› [Click here for more information on the Medium-Term Environmental Plan \(Environmental Activities > Environmental Policy, Vision, and Strategy > Environmental Targets and Results\)](#)

Metrics and Targets

Konica Minolta has established its Eco Vision 2050, which sets the goals of reducing CO₂ emissions over the product lifecycle and achieving Carbon Minus status, as its metric for managing the risks and opportunities posed by climate change. Results are reported every year.

The goal for reducing CO₂ emissions across the product lifecycle includes all of Scopes 1 and 2 (CO₂ emissions generated during the production stage and the sales and service stage) and the main components of Scope 3 (CO₂ emissions generated during the procurement stage, transportation and distribution stage, and product use stage). In the long term, Konica Minolta aims to reduce CO₂ emissions by 60% by 2030 and by 80% by 2050, and in the short term, the company aims to cut emissions by 50% by 2019, all compared to fiscal 2005 levels.

In fiscal 2019, a reduction of approximately 990,000 tons of CO₂ was realized, resulting in a 52% reduction and target achievement (see the graph below for the target and actual results).

The Medium-Term Environmental Plan, which designates 2019 as the target year, sets the target for the company's Green Factory activities of reducing CO₂ emissions in the production stage by 19,000 tons and also sets cost-cutting targets. By the end of the year, the company had achieved both the cost and emissions reduction targets, with an elimination of 30,100 tons of CO₂.

In its Green Products initiative, Konica Minolta has set targets of reducing CO₂ emissions in the product use stage by 17,200 tons and generating 770 billion yen in sales with a sales ratio of 70% for products certified as Sustainable Green Products in fiscal 2019. By the end of fiscal 2019, CO₂ emissions had been reduced by 14,800 tons, while sales of Sustainable Green Products reached 733.1 billion yen, yielding a sales ratio of 73.6%.

To minimize climate-related risks, Konica Minolta is aiming for 100% of its electricity for business activities to come from renewable energy, based on the assumption that fossil fuels will eventually become unavailable. The target renewable energy usage rates are 30% by 2030 and 100% by 2050.

Under the medium-term environmental plan for 2019, the target renewable energy usage rate was 1%. By the end of the year, a rate of 5.3% had been achieved. For more information, see "[Participation in RE100](#)." To minimize the risk of supply chain disruption, a goal of "zero incidents with serious business impact" was set in fiscal 2019. During the year however, there was a situation where operations were temporarily halted at a certain industrial park in China.

The supply of some raw materials was interrupted, and the inventory of raw materials for production was temporarily low. In order to prevent delays in product delivery to customers, Konica Minolta traced back the raw material supply route to the crude raw materials. For high-risk raw materials, the company has begun searching for suppliers outside of China, securing multiple suppliers, and investigating alternative materials.

In 2020, Konica Minolta set a new short-term target for achievement by 2022 to reduce product lifecycle CO₂ emissions by 52%. The company has also set a Carbon Minus goal, a commitment to achieve a CO₂ emissions reduction effect through business activities that exceeds the CO₂ emissions of the entire lifecycle of all Konica Minolta products. This would deliver a net reduction in emissions for society. If the Group can reduce lifecycle CO₂ emissions by 60% before 2030, the remaining 40% will be about 830,000 tons. Therefore, the Carbon Minus goal for 2030 is to reduce society's emissions by 830,000 tons or more, which would exceed the Group's Scope 1, 2, and 3 emissions. There are limits to what a single company can do on its own to achieve Carbon Minus status, so Konica Minolta is expanding its activities to include business partners and customers, with the aim of more broadly reducing CO₂ emissions. Konica Minolta expects this effort not only to boost its contributions to the environment across the entire supply chain, but also to reduce costs and increase sales.

Konica Minolta's Climate-Related Risks and Opportunities

The Paris Agreement provides a framework for the world to move more quickly and ambitiously to build a low-carbon global society. At the same time, there are concerns that the needed changes will not happen fast enough and climate change will have a harsh impact on the world.

Konica Minolta is forecasting using both optimistic and pessimistic scenarios, as described below. It is identifying business risks that could adversely affect the performance of the Group in the future as well as business opportunities that can be created by proactively addressing the challenges of climate change.

If the average global temperature increase is kept below 2°C and a low-carbon society is achieved:

As a transitional risk, if environmental laws and regulations become even stricter in the near future, including greenhouse gas emission regulations, energy efficiency regulations, regulations relating to Europe's Circular Economy Action Plan, and new and additional tax systems such as carbon taxes, there may be additional obligations and costs for legal compliance. This might result in higher costs for the Group and loss of business opportunities. Also, if business operations that rely on fossil fuels and resources, which are the main causes of human-caused CO₂ emissions, continue unchanged, they could reduce the Group's corporate value making it uncompetitive. This could lead to a decrease in sales opportunities. Konica Minolta is striving for more efficient production processes, developing and improving its production technologies, and promoting Green Factory activities that reduce both CO₂ emissions and costs. In addition, the Group aims to maximize energy cost decreases and CO₂ emission reductions throughout the supply chain by promoting Green Supplier activities. These involve sharing the Group's energy-saving technologies and expertise while working together with suppliers to reduce energy consumption. In addition, Konica Minolta believes that in order to compete as a sustainable growth company it must be able to quickly embrace a renewable energy society that does not depend on fossil fuels. Accordingly, it is a member of RE100, a global leadership initiative in which companies aim to operate their businesses using renewable energy exclusively. Konica Minolta has set a goal of procuring all the electric power used for its business activities from renewable energy sources by 2050.

On the other hand, Konica Minolta believes that accelerating the transition to a low-carbon society should create new business opportunities. In the long term, there could be widespread demand for the company's proprietary edge IoT technology in the field of edge computing, which does not require large-capacity servers. Since this can significantly reduce energy consumption and greenhouse gas emissions, demand for this technology by society as a whole could increase along with opportunities for Group sales.

In the medium term, if Konica Minolta can respond to changes in customer demand and preferences, it could also increase sales. This might include digital workplaces that support the transition to a full-scale paperless society, on-demand production processes that transform the business model of mass production and disposal, and material processing innovation solutions that curb energy and resource usage. It could also involve technology for utilizing recycled plastics and biomaterials to avoid new resource extraction, imaging IoT solutions for non-destructive inspection of greenhouse gas leaks from shale gas and other pipelines, as well as an ecosystem to support the environmental (sustainability) management of companies.

In the short term, Konica Minolta believes that active promotion of ongoing energy saving activities will reduce costs at its own factories. Not only that, it will create new business opportunities through collaboration with suppliers and business partners.

If the average global temperature increase exceeds 2°C and the predicted effects of climate change materialize:

In terms of physical risks, major natural disasters such as large-scale typhoons, floods, or forest fires could occur due to climate change, and supplies of electricity and water could become restricted as a result. If such an event were to occur at a Konica Minolta site or supplier, the Group's facilities could be damaged, operations might be temporarily halted, and production and shipping could be delayed. Also, if chronic climate change effects were to continue, such as altered weather patterns and widespread drought, procurement of natural resources might become problematic, and the supply of raw materials could be reduced or halted. In the area of industrial materials, which are highly dependent on natural resources for their production, Konica Minolta is advancing the development of new functional films that do not require natural resources. The Group is expanding its product lineup with materials based on cellulose-elimination technology. In the MFP business, Konica Minolta is accelerating the development of new digital solutions that do not require paper printing in the office. The Group is expanding sales of a new product, Workplace Hub. This is an integrated IT service platform that enables remote collaboration while providing robust information security. To better respond to climate-related natural disasters, Konica Minolta is expanding its own production sites in Europe and North America as bases for producing toner refills and parts for consumables needed in the mainstay office and professional printing business areas. The Group is working to establish a highly resilient supply systems through production in consumption regions.

On the other hand, the physical impacts of climate change could also create business opportunities. In the medium and long term, the need for early testing and drug discovery for unexpected diseases (including infectious diseases) is expected to increase due to the impact of climate change on ecosystems. Consequently, there might be more opportunities for Konica Minolta to utilize its genetic technology. In the healthcare field, imaging diagnosis using the Group's edge IoT technology can reduce the workload of medical practitioners, and its healthcare solutions can support communication among medical professionals. These products could see significant business growth opportunities as a result. With its imaging IoT and sensing solutions that can be used to prepare for extreme weather, the Group might also be able to meet new social needs for increased safety and security in the face of severe natural disasters.

		Risks Opportunities		
		Impact on procurement	Impact on direct operations	Impact on product and service demand
Transition risks and opportunities	<p>Higher procurement and manufacturing costs</p> <ul style="list-style-type: none"> ● Replacing fossil resources and fuels in production Long-term ● Response to emissions regulations and laws in line with measures to mitigate impact of climate change Medium-term Short-term ● Temporary suspension of production due to restrictions on electric power supply Medium-term 	<p>Increase in product development costs</p> <ul style="list-style-type: none"> ● Response to the market and new regulations on product energy efficiency in line with measures to mitigate impact of climate change Short-term <p>Lower sales</p> <ul style="list-style-type: none"> ● Decrease in office demand due to acceleration toward a paperless society Medium-term ● Decline in product competitiveness due to unsustainable use of resource and non-reusable design Medium-term 		
		<p>Higher sales</p> <ul style="list-style-type: none"> ● Edge computing, which does not require a data center Long-term ● Digital workplace to support a paperless society Medium-term ● Technology for upgrading recycled plastics Medium-term ● Digital on-demand printing and production that reduces unnecessary production Medium-term ● Solutions for material processing process transformation to reduce energy use Medium-term ● Leakage inspection system pipelines including those carrying shale gas Medium-term ● Ecosystem that supports corporate environmental and sustainability management Medium-term 		
Physical risks and opportunities	<p>Lower revenue due to a reduction in production capacity</p> <ul style="list-style-type: none"> ● Insufficient or interrupted supply of natural resources due to changes in climate patterns Long-term ● Supply chain interruptions following large-scale natural disasters Medium-term ● Depletion of water resources and restrictions on water intake Long-term 	<p>Higher sales</p> <ul style="list-style-type: none"> ● Testing and drug discovery support for unanticipated diseases (including infectious diseases) Medium-term ● DX solutions to support healthcare settings (diagnosis, engagement, and collaboration) Medium-term ● Safe and secure imaging IoT solutions for abnormal weather Medium-term 		

Participation in RE100, Which Aims to Run Businesses with 100% Renewable Energy

Konica Minolta joined RE100, a global leadership initiative that brings together businesses committed to sourcing 100% renewable energy for their operations.

Konica Minolta aims to procure 100% of the power used in its own business activities from renewable energy sources by 2050. By doing so, Konica Minolta will accelerate its efforts to achieve Eco Vision 2050 while also helping to reduce global CO₂ emissions by expanding the use of renewable energy. As a medium-term step toward achievement of its long-term goal, Konica Minolta set an internal target of sourcing renewable energy for 30% of its energy use by 2030. The Group will start reviewing its power procurement contracts one by one at production sites and sales sites, starting with countries and regions where renewable energy power is relatively widespread, and switch over to renewable energy, beginning with those sites where it is possible.

Going forward, Konica Minolta will continue to look for the most suitable methods for each region worldwide and will step up efforts to expand the procurement of renewable power.

For more details:

- › [Participation in RE100, Which Aims to Run Businesses with 100% Renewable Energy on Saving Energy and Preventing Global Warming in Production Operations, Green Factories \(Production Initiatives\)](#)
- › [Adoption of Renewable Energy on Reducing Environmental Impact in Sales Activities, Green Marketing](#)

CO₂ Reduction Target Approved by the SBT Initiative

When formulating the Medium-Term Environmental Plan 2019, Konica Minolta backcasted from Eco Vision 2050 to set a medium-term goal for the year 2030, to reduce CO₂ emissions throughout the product lifecycle by 60% from fiscal 2005 levels. The goal was approved by the international SBT Initiative* as a target with a scientific basis.

- * SBT Initiative: Jointly established in 2015 by CDP (formerly the Carbon Disclosure Project), the United Nations Global Compact, the World Resources Institute (WRI), and the World Wide Fund for Nature (WWF). The SBT Initiative's aim is to promote the achievement of science-based targets (SBTs) for greenhouse gas emissions reduction, in order to keep the increase in global average temperature to well below 2°C above pre-industrial levels.

Participation in Japan Climate Initiative to Achieve Paris Agreement

The Japan Climate Initiative (JCI) is a platform in which companies, local governments, NGOs, and other organizations participate with the aim of achieving a decarbonized society. Konica Minolta joined as an initial member when the JCI was established in July 2018. At JCI's Japan Climate Action Summit 2019 held in October, Group executive Takenori Takahashi participated in a panel discussion, speaking as a person on the frontlines of corporate efforts to achieve a carbon-free society. In front of 700 attendees, he expressed Konica Minolta's strong determination to achieve Carbon Minus status worldwide. He explained that the Group is working with business partners and customers to reduce CO2 emissions for society by an amount greater than the company's total Scope 1, 2 and 3 emissions as a whole. As one of a diverse group of non-state actors, Konica Minolta promises to put itself at the forefront of global endeavors to achieve the decarbonized society sought by the Paris Agreement.

**JAPAN
CLIMATE
INITIATIVE**

Participating in the "Challenge Zero" Initiative of Japan Business Federation (Nippon Keidanren)

Konica Minolta endorses Nippon Keidanren's Declaration on "Challenge Zero."* The Group participates by sharing specific information on how it is innovating to meet ambitious goals that will contribute to a carbon-free Japan. By actively striving to develop net-zero emissions technology and generating an upward spiral of environmental protection and business growth, the Group aims to help achieve Keidanren's "Society 5.0 for SDGs" initiative, which aims to solve social issues through innovation.

Achieving Net-Zero Plastic-Related CO2 Emissions in Multi-functional peripherals with Material Technologies That Use Biomass-Derived and Waste Resources

Konica Minolta aims to achieve net-zero plastic-related CO2 emissions from its Multi-functional peripherals (MFPs) by developing even more advanced technologies for recycling waste materials as high-performance materials. The use of biomass-derived materials and waste materials to create high-performance materials for MFPs and other devices generally faces an uphill climb: performance is typically lower and ensuring consistent product quality is more difficult than when using virgin materials made from petroleum. The company's technologies make it possible to utilize biomass-derived materials instead of the petroleum-based materials typically used in MFPs and consumables such as toner. Konica Minolta is developing new types of plastics that solve these problems, leveraging its years of experience with original material and molding technologies, and combining material development, material selection and processing technology.

Practical application of these technologies will go beyond the MFPs Konica Minolta sells. The company will also provide them via its Environmental Digital Platform, sharing them with various companies, expanding the circle of cooperation globally, and dramatically increasing the effect.

* About "Challenge Zero"

"Challenge Zero" is a new initiative established in June 2020 by the Japan Business Federation (Keidanren) in collaboration with the Japanese government. It aims to proactively publicize and support innovative action taken by companies and organizations to help build the "decarbonized society" which is the long-term goal of the Paris Agreement (the international framework on climate change).

 [Challenge Zero website](#)

Environmental Targets and Results

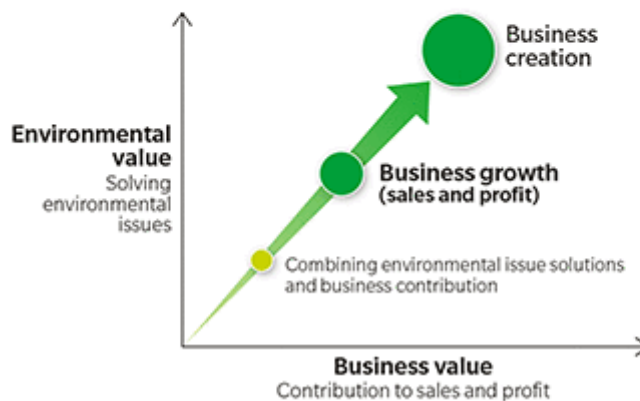

Environmental Management Concept

Greater Business Contribution by Helping Solve Environmental Issues

Under its management vision, Konica Minolta aims to be a global company that is vital to society. To realize this vision, it is necessary to identify social challenges as business opportunities and generate innovative solutions, which in turn will drive Konica Minolta's own sustainable growth.

Konica Minolta's environmental management is based on the concept of growing existing businesses and creating new ones by helping to solve environmental challenges and contributing to environmental protection. The aim is to grow the company and become an enterprise that is vital to the world.

Environmental Management Approaches

Creation of Shared Value with Stakeholders to Realize “Carbon Minus” Status

When working to overcome environmental challenges on a global scale, there is a limit to what can be achieved by just one company. This is why it is essential to expand the impact of environmental efforts by working with stakeholders such as suppliers, customers, and local communities.

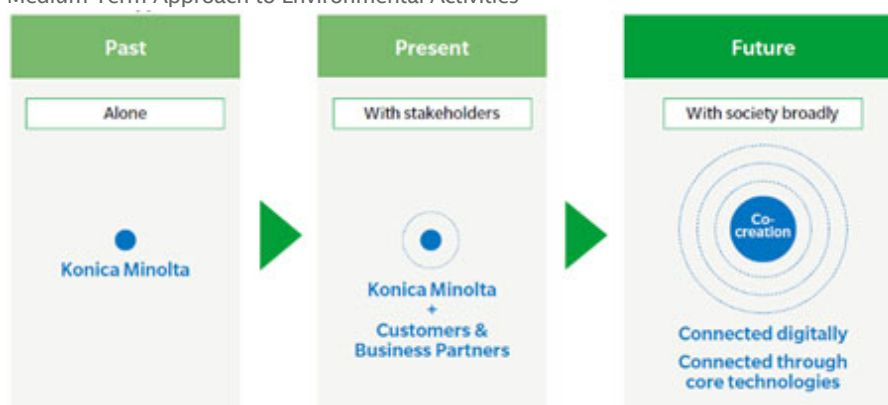

Konica Minolta is working toward Carbon Minus status to reduce the environmental impact of society as a whole by collaborating with stakeholders, including business partners and customers.

Furthermore, the company has been developing a digital environmental platform as a measure to collaborate with more companies.

For example, by creating a database of energy-saving methods used internally and sharing it with business partners, Konica Minolta can help suppliers to devise and implement their own energy-saving measures. By sharing these activities with customers and expanding the circle of cooperation globally, Konica Minolta believes that it can make a dramatically greater contribution to solving global environmental problems.

› [Environmental digital platform](#)

Medium-Term Approach to Environmental Activities

Medium-Term Environmental Plan 2019: Approach, Targets, and Results

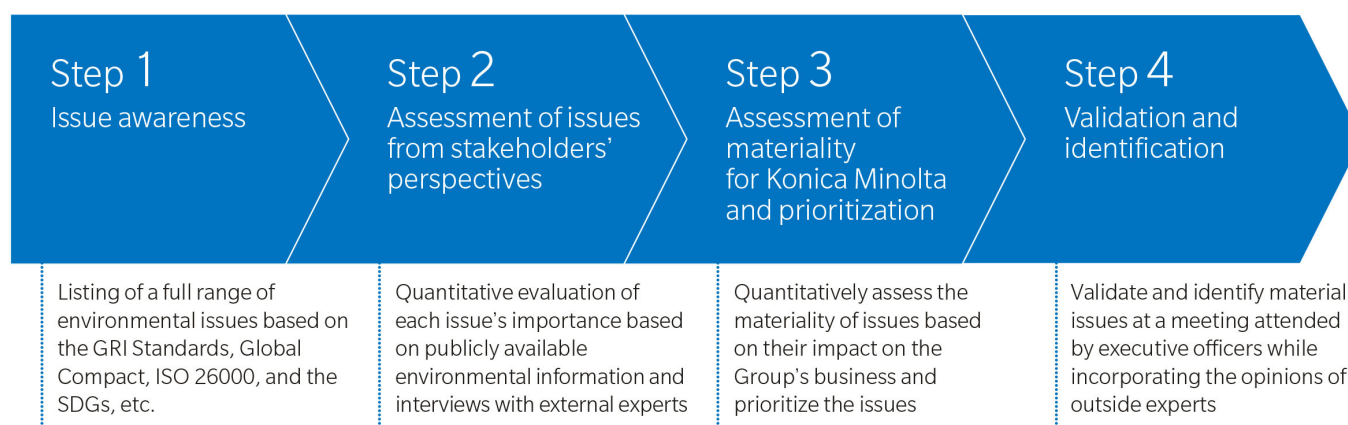

Material Issue Evaluation and Identification Process

Companies today must address a wide range of environmental issues, such as climate change and resource depletion. In light of this, recent changes in society, and the evolving business environment, Konica Minolta has identified material issues. It aims to prioritize these issues and promote initiatives for helping to solve them, while also achieving business goals.

To identify its material issues, the Group first made a comprehensive list of environmental issues with reference to international guidelines. Then, it identified key issues based on their importance to stakeholders and their importance for the business. To determine importance to the business for each issue, the impacts were quantitatively evaluated using five levels. Risk analysis was used to calculate the amount of profit that would be lost if a certain risk materialized, as well as the amount of profit that could be generated if a potential opportunity was seized. In determining the importance of each issue, the Group maintained objectivity by seeking the opinions of outside experts.

The Group Executive for Corporate Sustainability, who chairs the Group Sustainability Promotion Committee, verified this evaluation process and the resulting material issues, before identifying the ones that should be prioritized. The selected material issues were then approved by the Board of Directors.

Process for Identifying Material Issues

Identifying Material Environmental Issues Presenting Risks and Opportunities

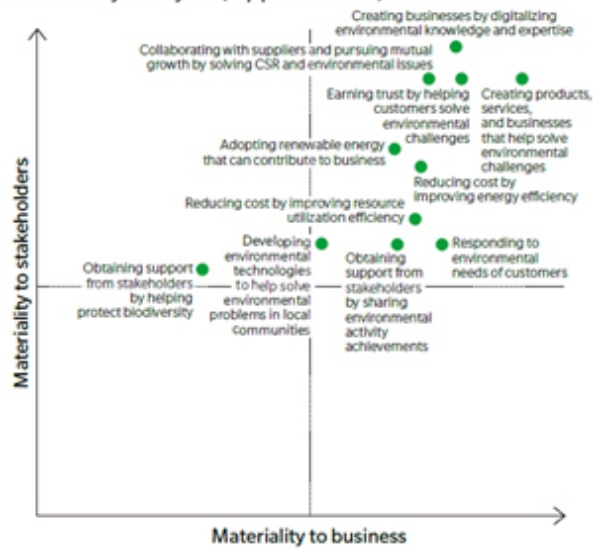

When formulating the medium-term environmental plan, Konica Minolta identified various environmental factors related to its business in terms of both risks and opportunities. Based on these findings, material issues were selected where solutions can lead to business growth. The company reviews each material issue annually to ensure the issues selected and related plans are appropriate.

Through this process, goals for reinforcing the business are matched with environmental targets. The plan then becomes a commitment for both top management and the entire organization, resulting in effective environmental management.

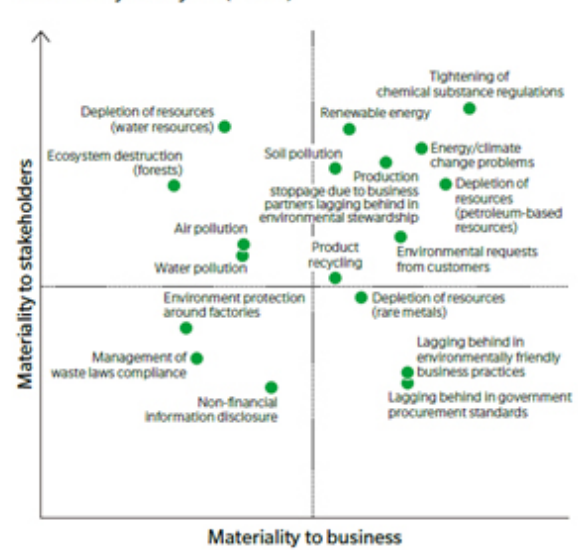

Under the Medium-Term Environmental Plan 2019, three issues have been selected as the most important: energy and climate change problems, depletion of resources, and tightening of chemical substance regulations.

Materiality Analysis for the Medium-Term Environmental Plan

Materiality Analysis (Opportunities)

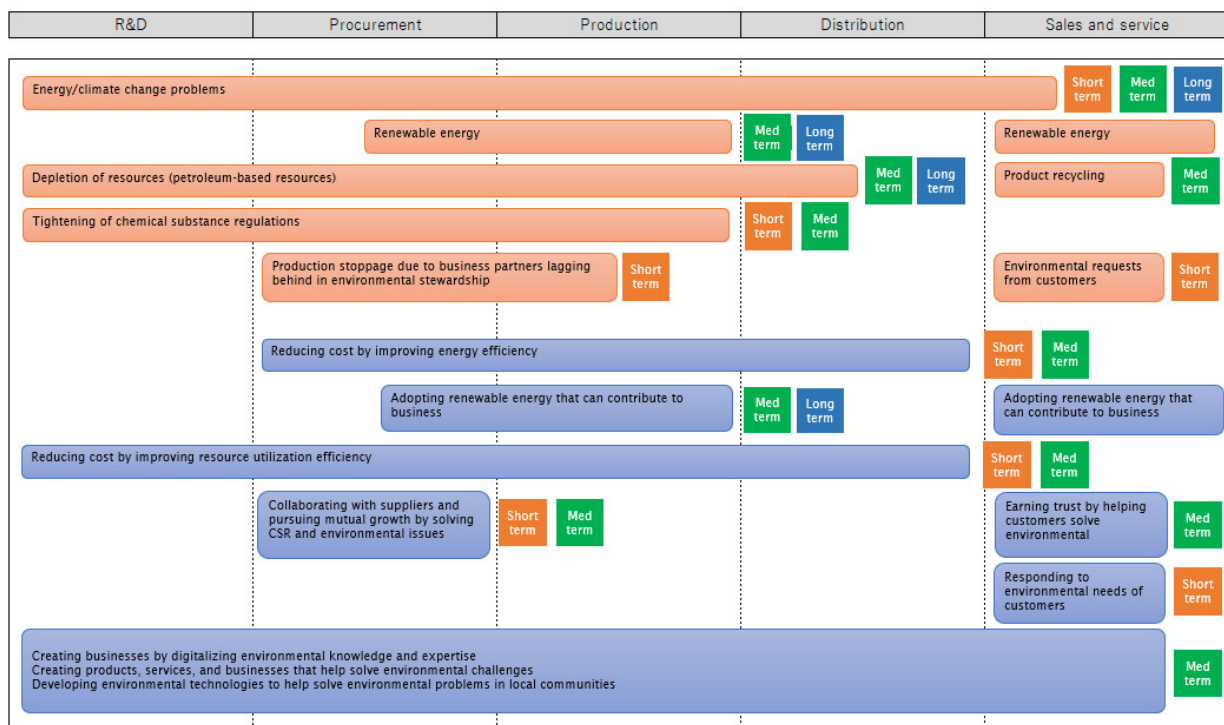

Materiality Analysis (Risks)

Important Environmental Issues for Product Life Cycles

Konica Minolta identifies material environmental issues, including risks and opportunities, throughout its value chains. These are issues that need to be specifically addressed by relevant departments including product planning and development, procurement and production, as well as sales and service. The Group also determines when business risks and opportunities related to important environmental issues are likely to materialize, based on short, medium, and long-term perspectives.

■ Risks
 ■ Opportunities

Impact of Business Risks and Opportunities Related to Important Environmental Issues

As current environmental and social issues become even more serious, Konica Minolta will face even greater risks to its business. In the long term, manufacturing will need to be revolutionized to protect the global environment. Alternatives will need to be found for fossil fuels and similar resources, and energy efficiency will need to be optimized for both production and product usage. In the short and medium terms, fossil resource prices will likely rise, the need for energy conservation will increase further, supply chains could be disrupted due to abnormal weather events, and paperless offices will probably become commonplace. Unless it takes suitable measures now, the Group will likely be faced with larger capital expenditures, higher costs, and lost business opportunities. Failure to comply with new chemical control regulations, including those that restrict certain chemical content in products, could lead to lost sales opportunities and lower revenues.

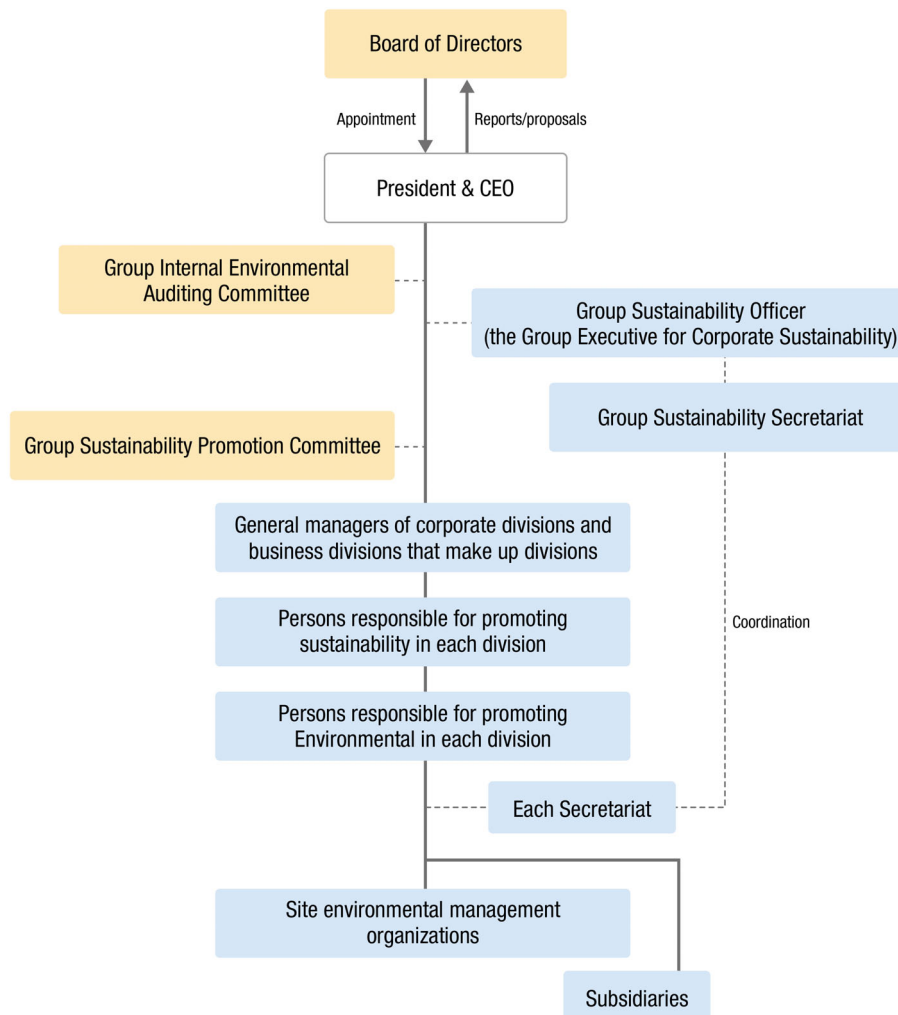

On the other hand, Konica Minolta believes it can create business opportunities by providing solutions to help solve these environmental issues. By actively introducing cutting-edge technology and combining it with Konica Minolta's strengths in digital input and output, the Group is transforming itself into a digital company with insight into implicit challenges. The aim is to create solutions that help solve social issues. With regard to the global environment, the Group is working to address issues such as climate change, resource depletion, and waste by incorporating them into its medium and long-term business strategies. For example, environmental impact can be lowered by reducing production, transportation, inventory, and disposal in the manufacturing industry. Konica Minolta believes that it is contributing to this solution by providing on-demand equipment for industrial printing of materials such as packaging, labels, and textiles. Since excessive paper consumption is an issue in many companies, the Group is promoting a shift to paperless offices by providing digital workplace solutions that improve work flow efficiency. The Group is also working to reduce the enormous amount of energy that companies use to perform big data analysis these days, by offering and promoting onsite data analysis in the form of edge computing. In this way, Konica Minolta is balancing business expansion with environmental protection and regards green business management as a key business strategy.

Target Setting Process

The President has ultimate responsibility for and authority over all environmental management including climate change issues and is also accountable for its effectiveness. The President appoints the Group Executive for Corporate Sustainability (Group Sustainability Management Representative) to execute sustainability management and handle sustainability and environmental measures. The Group Executive formulates a medium-term plan for sustainability, which is then approved by the Board of Directors as a corporate management plan. In addition, the Group Executive for Corporate Sustainability reports monthly to the President and the Audit Committee established by the Board of Directors to report progress made on environmental management and on issues including climate change.

Konica Minolta has established a Group Sustainability Promotion Committee headed by the General Manager of the Corporate Sustainability Division, which serves as the organization implement the medium-term sustainability plan for the whole Group. The committee, in which persons responsible for sustainability promotion in each key division participate, deliberates the Group's medium-term sustainability plan and annual plans. It also checks quarterly progress and conducts investigations related to the Group's sustainability issues, including environmental ones.

Organization of Group Environmental Management

Targets and Results

› [Click here for information on targets and results \(Konica Minolta's Sustainability > targets and results\)](#)

New Environmental Targets for 2022

Moving forward with Carbon Minus goals for 2030

With the goal of achieving Carbon Minus status by 2030 instead of 2050, Konica Minolta's target for 2022 is to reduce CO₂ emissions across its entire product lifecycles by 52% compared to fiscal 2005 levels. Two-thirds of that amount, 660,000 tons, will come from CO₂ emissions savings generated by customers, suppliers, and society.

Carbon Minus by 2030 (instead of 2050)

Key measures for 2022

To move forward the goal of Carbon Minus status from 2050 to 2030, it is necessary to accelerate both the reduction of the company's CO₂ emissions and the support for CO₂ emissions reduction outside the company. Konica Minolta believes that the use of digital transformation (DX) can dramatically reduce CO₂ emissions from both sources, and it has set the new goal of achieving Carbon Minus status by 2030.

1. In-house initiatives

Konica Minolta will strengthen the Green Factory activities it has been pursuing. In particular, it will increase energy efficiency by promoting digital manufacturing at assembly factories, which have numerous suppliers, through optimal production plans that include on-site productivity improvement and working with suppliers. In addition, it will strengthen its relationship of trust with business partners and strive to support the reduction of CO₂ emissions outside the company by stepping up its Green Supplier activities, such as providing expertise to reduce CO₂ emissions to suppliers as well as considering and supporting reduction measures.

With regard to renewable energy, the Group has achieved 100% renewable energy at two production sites in China and 43 sales companies in Europe. In the future, it will consider the optimal means for each region globally and strengthen its efforts to expand procurement of electricity derived from renewable energy.

New Sustainable Factory Certification System

The Sustainable Factory Certification System is being launched in fiscal 2020. In addition to environmental impact and cost reduction efforts that have been promoted so far, Sustainable Factories will pursue targets for 2022 in order to meet the expectations of the wider society. This includes expanded adoption of renewable energy and greater promotion of CSR procurement. While further deepening cooperation with stakeholders such as customers, business partners and local communities, Sustainable Factories will utilize their own technology and expertise to help solve social issues and protect the broader global environment by expanding the participants involved.

Sustainable Factory Certification Criteria			Raw material utilizing site	Assembly site
Environmental Impact reduction	Environmental impact reduction to be achieved*	CO ₂ emissions	3% reduction annually (9% over 3 years)	2% reduction annually (6% over 3 years)
		Effective resource utilization	2% reduction annually (6% over 3 years)	2% reduction annually (6% over 3 years)
Stakeholders	Helps to solve environmental issues for the wider society (stakeholders) by using its own environmental technology expertise. Reduces stakeholder CO ₂ emissions by an amount equivalent to the actual CO ₂ emissions of the site.		1% reduction annually (3% over 3 years)	2% reduction annually (6% over 3 years)
Guideline	Biodiversity and other initiatives		Conformity	Conformity

* For sites with an environmental impact that is less than 1% of Konica Minolta's total, the target is 1% reduction annually (3% over 3 years).

2. Initiatives carried out with suppliers

Konica Minolta has been engaged in a wider range of initiatives beyond Scope 3 CO₂ emissions through the supply chain by conducting Green Supplier activities in which Konica Minolta and its suppliers brainstorm and improve together while touring each other's production sites. By digitizing energy diagnostic tools for factories, and replacing the previous method of sending experts out to visit facilities, suppliers are now able to diagnose, identify problems, and implement measures on their own. This provides efficient support for the environmental activities of even more suppliers. The Group believes that this digital transformation will increase the number of suppliers it can support by more than tenfold.

In addition, the Group already has installed sources of renewable energy at MFP factories in China. It will support suppliers' shift to renewable energy by providing adoption expertise and coordinating with suppliers at introduction.

New Digital Green Supplier Activities

In order to collaborate with even more business partners, Konica Minolta began promoting Digital Green Supplier activities in fiscal 2020. The aim is to dramatically reduce CO₂ emissions across the entire supply chain by promoting Green Supplier activities using digital transformation (DX) technology.

3. Initiatives to conduct with customers

Konica Minolta combines business strategy with promotion of sustainability management, such that the growth of its business will simultaneously lead to solutions to environmental issues. In addition to reducing CO₂ emissions during customer use by improving the energy-saving performance of products, Konica Minolta will also support customers' businesses and contribute to reducing the environmental impact through operational efficiency improvement. It will do this by providing products and services that encourage customers' DX, such as: reform of production processes through the provision of digital on-demand printing solutions for packages, labels, and textiles; digital workplaces that promote work style reform that is not bound by paper or location; and new businesses that support workflow transformation with edge-based IoT solutions.

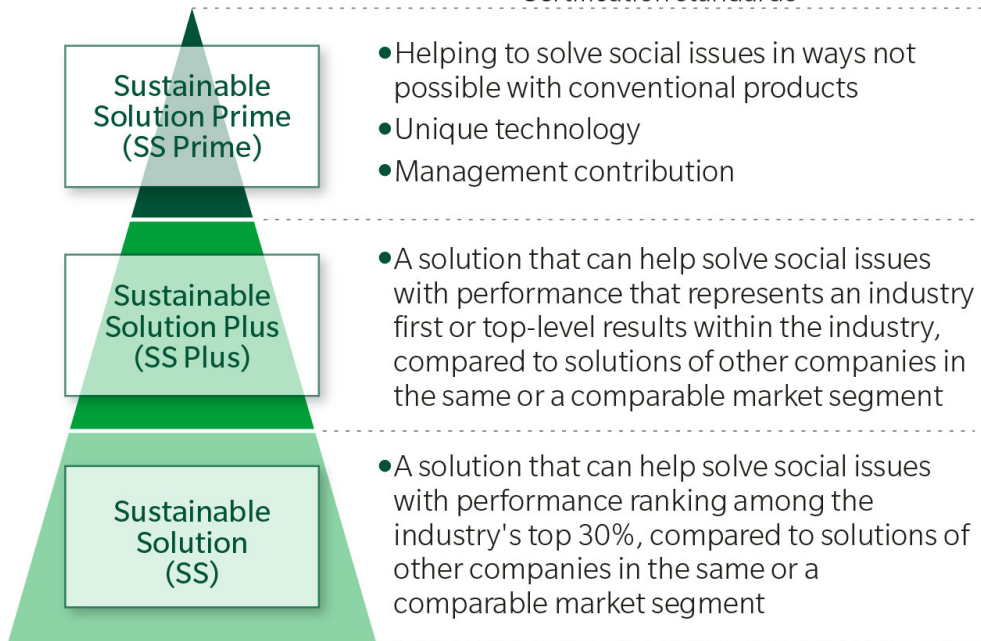

Furthermore, in order to confront this problem as a whole industry, and to dramatically raise environmental problem solving, in June 2020, Konica Minolta, together with 16 companies in Japan, launched a digital environmental platform that aims to improve environmental management efficiency by sharing and accumulating environmental knowledge and expertise among participating companies, and co-creating new value.

New Sustainable Solution Certification System

The Sustainable Solution Certification System is being launched in fiscal 2020. With the new System, criteria are established for different businesses and product characteristics with respect to certification standards tailored to the individual environmental and social issues that Konica Minolta seeks to help solve. Successful products are certified at one of three levels, based on the degree of achievement. Konica Minolta will further reduce environmental impact by creating products and solutions that meet environmental label standards used around the world.

Sustainable Solution Certification System

Management System

Environmental Management System

Operating management system based on ISO 14001

To ensure efficient implementation of environmental management throughout the Group as a whole, Konica Minolta operates its management system based on ISO 14001, and it has established a basic policy of requiring that all Group production sites around the world work to obtain ISO 14001 certification.

Konica Minolta is engaged in Green Product, Green Factory, and Green Marketing activities throughout the product lifecycle. In addition, targets are set within these activities to help solve business and environmental issues, and environmental efforts are integrated into the core business activities. This approach is consistent with ISO 14001:2015.

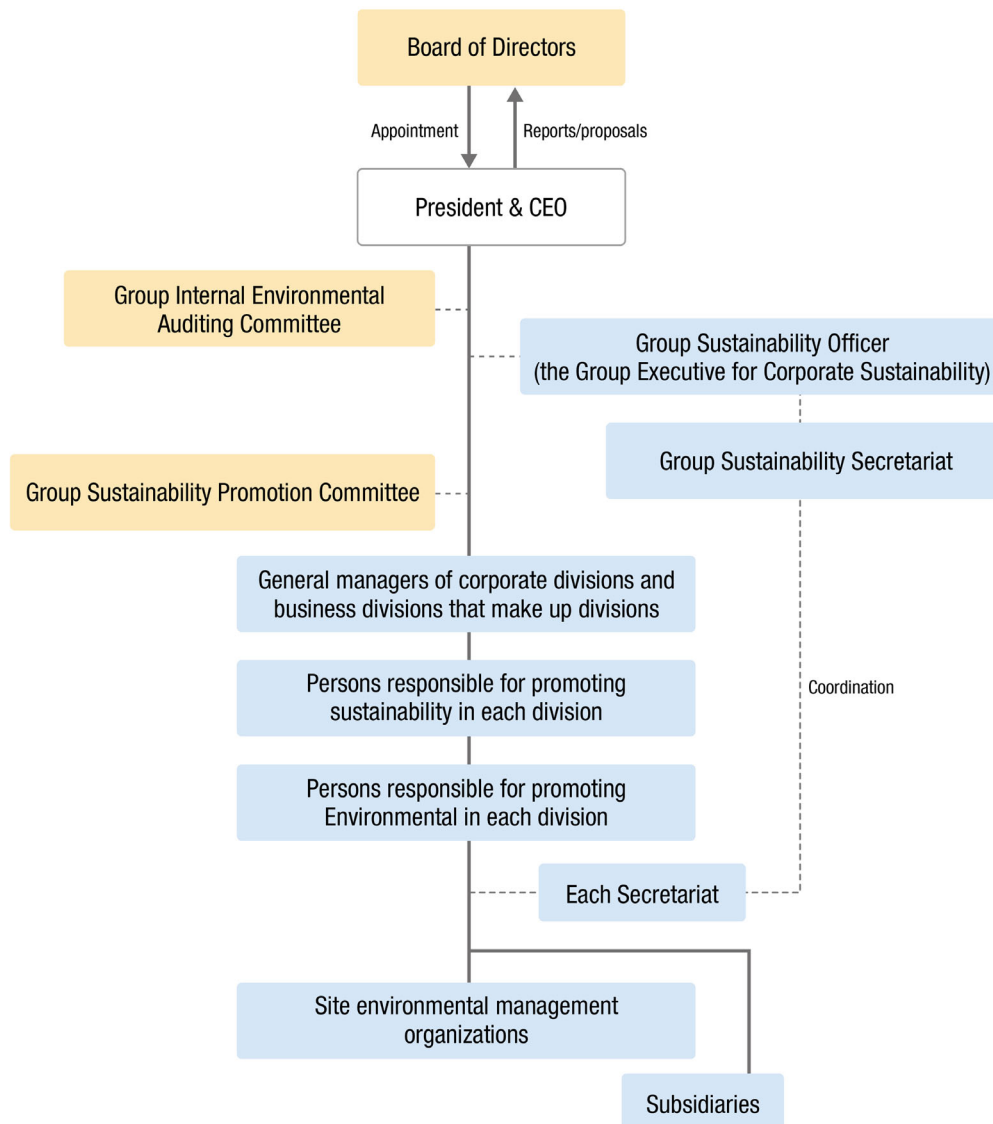

In order to promote environmental activities efficiently throughout the entire Group, Group companies in Japan acquired integrated Group ISO 14001:2015 certification in fiscal 2016. Meanwhile, activities under ISO 14001:2015 have also begun at Group sites outside Japan based on the approach of integrating environmental and core business activities. These companies completed certification in the first half of fiscal 2018.

Organization

All aspects of environmental management are overseen by the President and CEO of Konica Minolta, Inc.

The President has ultimate responsibility for and authority over all environmental management including climate change issues and is also accountable for its effectiveness. The President appoints the Group Executive for Corporate Sustainability (Group Sustainability Management Representative) to execute sustainability management and handle sustainability and environmental measures. The Group Executive formulates a medium-term plan for sustainability, which is then approved by the Board of Directors as a corporate management plan. In addition, the Group Executive for Corporate Sustainability reports monthly to the President and the Audit Committee established by the Board of Directors to report progress made on environmental management and on issues including climate change.

Konica Minolta has established a Group Sustainability Promotion Committee headed by the General Manager of the Corporate Sustainability Division, which serves as the organization implement the medium-term sustainability plan for the whole Group. The committee, in which persons responsible for sustainability promotion in each key division participate, deliberates the Group's medium-term sustainability plan and annual plans. It also checks quarterly progress and conducts investigations related to the Group's sustainability issues, including environmental ones.

Organization of Group Environmental Management

Environmental Audits

At Konica Minolta, the Group Internal Environmental Auditing Committee, which is chaired by the head of the Corporate Audit Division, directs the internal environmental auditing for the entire Group.

Through internal environmental audits, which are conducted at least once a year, the Group verifies the adequateness and effectiveness of management systems. Additionally, by checking the implementation status of the medium-term plan, audits ensure that management systems are functioning effectively in all the Group's organizations.

Environmental Risk Management

Konica Minolta treats environmental risks as business risks. Risks are managed under the Risk Management Committee, which is chaired by the executive officer in charge of risk management, who is appointed by the board of directors, to prevent risks from coming to a head.

The committee conducts risk assessments of corporate activities, and confirms the identified risks and necessary measures to minimize them. It also confirms and reviews whether the risk management system is functioning effectively. The findings of the Risk Management Committee are reported regularly to the Audit Committee, which consists of directors who are not also serving as executive officers.

The Group has also established management systems centered on environmental organizations in Europe, North America, China, and Japan so that production site and sales companies in each region can respond appropriately to applicable environmental laws. Under these systems, steps are taken to comply with relevant laws and regulations in each country (e.g. chemical substance regulations, restrictions on chemicals contained in products, recovery and recycling regulations, and energy saving regulations).

Compliance with Environmental Regulations

As environmental problems such as global warming and the depletion of energy resources increase in scope to encompass entire regions, and indeed, the entire planet, government policies and regulations at the regional and national levels around the world are being reconsidered and strengthened in order to ensure sustainable growth.

As a global business enterprise, Konica Minolta is strengthening its global compliance system to ensure that all of its production sites and sales offices comply with all legal regulations.

In fiscal 2019, the Group conducted compliance assessments of all Group production sites and confirmed the status of compliance in keeping with the new regulations and legal revisions at sales offices. No serious violations were found with regard to environment-related laws and regulations.

Emergency Response

Emergency response procedures have been established at Group companies in Japan that have acquired integrated ISO 14001 certification. Based on the group-wide rules stipulated in the Konica Minolta Environmental Management Manual, each department has identified potential situations during an emergency or natural disaster that could have a significant impact on the environment. The departments have also established the necessary crisis response procedures, and they regularly test them. The test results are then reviewed and modified as necessary.

In accordance with emergency response guidelines created by each department, training is held at least once a year to help minimize damage in the event of a major accident. For example, evacuation drills are carried out to practice for a potential explosion caused by solvent ignition, and similar drills are done to prepare for a potential external chemical spill caused by chemical leakage into a rainwater drainage structure.

Each department has also established an emergency communication system to report to the Group Executive responsible for sustainability on the same day as the incident, and all are working to take appropriate measures.

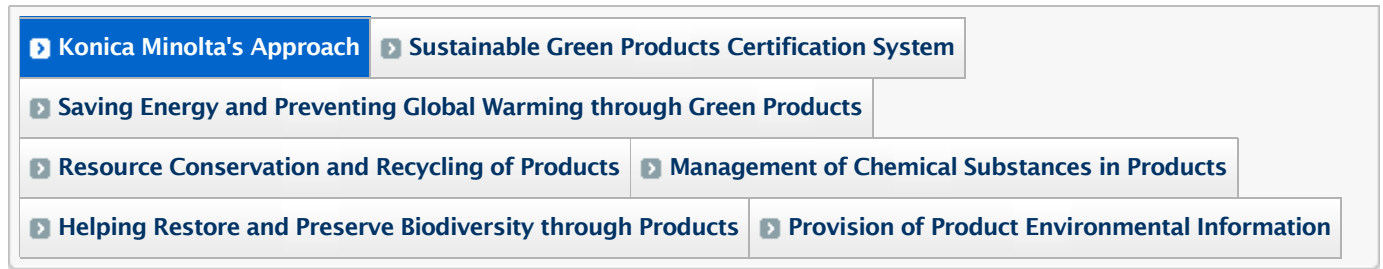

Environmental Education

Each Group company with integrated ISO 14001 certification provides a range of environmental education to its employees in order to enhance their awareness of and ability to perform environmental activities. Many employees participate in training programs to raise the level of the Group's environmental activities. The content ranges from specialized knowledge to the understanding of issues related to global environmental problems. At least once a year, training is given to new hires, internal environmental auditors, and those involved in chemical substance management related to products.

Environmental Education and Training System

	New hires / Junior-level employees / Senior-level employees	Managers
General education	New hires education	New manager education
	Education at each site	
	Education in each department (compliance matters / target management)	
Specialized education	Internal environment auditor education (New appointees / Refresher training)	
	Product-related chemical substance control education ◆ For planning/management/product development /production/quality assurance/sales departments ◇ For equipment products/auxiliary materials /chemical products/chemicals	

Konica Minolta's Approach

Background and Issues

Given the widespread concern about environmental and social challenges such as climate change and economic disparity faced by the world today, the value that people seek is shifting from material wealth to improving the quality of society. By understanding the evolving values of society and contributing solutions, Konica Minolta is able to continue to provide competitive solutions that enhance its profitability.

Vision

While working to provide solutions that help solve challenges faced by customers and society as a whole, Konica Minolta also aims to encourage the widespread adoption of these solutions by widely promoting their value. Through initiatives like these, while helping to realize the Sustainable Development Goals (SDGs), Konica Minolta strives to help build a sustainable society, earn social confidence, and achieve sustainable growth alongside the broader society as a company of choice.

Key Measures and KPIs

Creating Sustainable Solutions (SS) sought by customers and society (fiscal 2020—fiscal 2022)

- Create Sustainable Solutions and increase their sales ratio
- Enhance contribution toward Carbon Minus status

Sustainable Green Products Certification System

▶ Konica Minolta's Approach ▶ Sustainable Green Products Certification System	
▶ Saving Energy and Preventing Global Warming through Green Products	
▶ Resource Conservation and Recycling of Products	▶ Management of Chemical Substances in Products
▶ Helping Restore and Preserve Biodiversity through Products	▶ Provision of Product Environmental Information

Outline of the Certification System

Konica Minolta introduced its original Green Products Certification System in fiscal 2011 to drive the creation of environmental value that matches business and product characteristics. The goal is to reduce the environmental impact of customers and society, while also raising profitability. The company has developed many Green Products since the program's launch.

In fiscal 2017, Konica Minolta began combining optical, image processing, measurement, and other technologies with its strengths in digital technology to create products and services that can help provide solutions to environmental and social challenges based on the SDGs.

Konica Minolta also launched a Sustainable Green Products Certification System.

Fiscal 2019 Activity Results

In fiscal 2019, Konica Minolta aimed to increase the sales of certified products to 770 billion yen, equivalent to 70% of the total sales of the Group. It placed 14 new models of certified Sustainable Green Products on the market, bringing the total to 394. Sales of Sustainable Green Products in fiscal 2019 came to 733.1 billion yen, or 74% of the Group's total sales. Due to improved environmental performance, these Sustainable Green Products also had a CO2 emissions reduction effect during product use of 14.8 thousand tons and represented 12.4 thousand tons of effectively used resources.

Energy Savings of Office Equipment

Reduction of Power Consumption During Product Use

Konica Minolta is working on the development of low-temperature fixing toner and efficient fixing systems to help save power. The bizhub C360i series released in 2019 offers standard power consumption (TEC value) for one week that is approximately 20% to 26% less than the previous model. By reducing the TEC value, CO₂ emissions are also greatly reduced.

Comparison of TEC values between a previous model and the bizhub C360i series

Simitri V Toner Fixable at a Low Temperature

In MFPs, heat is needed to fix toner to paper, and the power used for that purpose accounts for more than 60% of total power consumption. Konica Minolta has been conducting research and development into toners that can be fixed at lower temperatures, and has developed Simitri V Toner, a proprietary polymerized toner. The company successfully reduced the fixing temperature by about 15 degrees Celsius compared to a previous MFP model (C368). This, combined with a new fixing device, is helping to reduce MFP power consumption. Moreover, Simitri V Toner requires approximately 25% less water to manufacture compared to a previous polymerized toner.

Pad Pressure Fixing System Reduces Power Consumption for Printing

In order to start printing from an MFP, the fixing rollers have to be heated to a certain temperature. Konica Minolta has adopted a pad pressure fixing system for its latest i-Series MFPs in order to efficiently utilize Simitri V Toner, the company's new low-temperature fixing toner. With this new fixing system, the belt and rollers have been reduced in diameter and insulated, thereby substantially cutting the power needed for heating the fixing device during MFP operation.

📄 Relevant link: Technology Report 2020 (Vol.17)

LED Light Source Reduces Power Consumption During Scanning

Konica Minolta uses LED, which has greater power-saving performance than fluorescent lamps, as the light source for scanners in its MFPs. This has also improved scanning speeds, since LED lights increase the brightness of manuscript exposure.

“Power Save” Feature Reduces Power Consumption When Product Not in Use

Konica Minolta equips its MFPs with a “power save” feature that puts the machine into an energy-saving state, such as automatically turning off the control panel display when the machine has not been used for a certain amount of time. This does not hinder everyday work, since the machine automatically returns to normal mode during power save when it receives a fax or a print signal from a PC.

Proximity Sensor That Can Save Electricity Without Lowering Operational Efficiency

Konica Minolta equips its MFPs with a proximity sensor that automatically returns the machine to normal mode from sleep mode just by bringing a finger close to the control panel. This allows energy savings without lowering operational efficiency, as no time needs to be spent pressing buttons to bring the machine out of sleep mode.

Energy-saving Designs That Power Only the Areas Needed

Konica Minolta minimizes power consumption through energy-saving designs that enable power supply only to areas needed for each function—for example, not starting up the printer control panel when printing from sleep mode or not turning on the toner fixing heater when using the scanner or fax..

“Print Preview” to Reduce Misprints

Misprints can be prevented, as it is possible to preview the finished document on the machine’s LCD screen before printing. This saves paper and also reduces wasteful power consumption.

Preview screen

Weekly Timer with a Learning Function

A weekly timer that automatically switches between normal mode and power-saving mode at pre-set times enables efficient electricity savings according to office use, such as at lunchtime, at night, and days off. The machines are also equipped with a learning function that automatically makes corrections when there is a difference between timer settings and actual usage, based on usage data for a four-week period. This enables operational management with greater energy-savings effects.

Eco Dashboard Increases Users' Environmental Awareness

Graphs showing environmental contribution are displayed to increase users' environmental awareness. Reductions for different indicators, such as power consumption and use of toner and paper are displayed on the control panel and can be checked by department and user.

* The above feature is not available on all models.

Non-Image Area Erase function" Saves Toner

When copying a page from a thick book, the lid often needs to remain open, creating a black area around the document. With this function however, the printed page is automatically detected and the surrounding dark area is eliminated. This reduces unnecessary toner use.

Industrial Inkjets Contributing to Energy Savings in the Textile Printing Process

Textile Printer Reducing Electricity Usage through On-demand Production

The inkjet textile printer does not require the plate making and colored size mixing that is needed with conventional screen-printing. It also contributes to the reduction of energy usage, resources usage, and waste, since it enables on-demand production that uses only the amount of ink and material needed. It reduces environmental impact significantly, with a 57% reduction in electricity usage compared to conventional screen-printing. In addition, it helps save energy for operations such as air conditioning and lighting by increasing customers' production efficiency.

Nasseger SP-1 inkjet textile printer

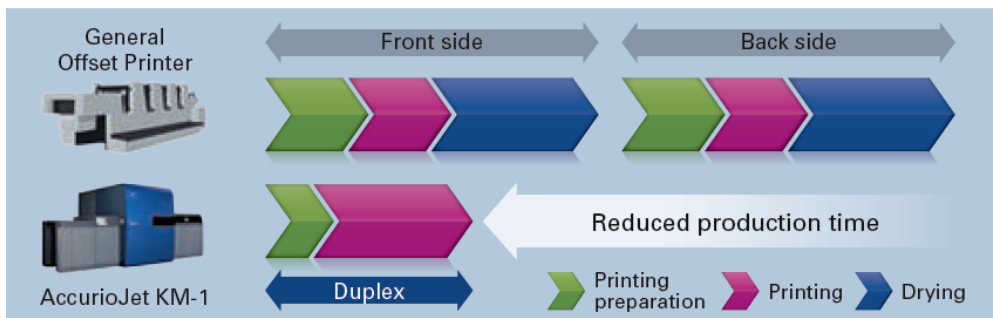

UV Inkjet Digital Printing Machine That Helps Save Energy During Printing

UV Inkjet Digital Printing Machine That Reduces Power Consumption by Realizing Automatic Duplex Printing without Drying Time

The UV inkjet digital printer, AccurioJet KM-1, offers high productivity. With newly developed UV inkjet ink, it can be used for various printing media that were difficult to accommodate with a conventional B2 digital printer and water-based inkjet ink. The AccurioJet KM-1 enables automatic duplex, high-quality printing. Unlike general offset printing, a printing plate is not required. Precise inkjet output control eliminates the need for color matching between devices, which is necessary when using multiple digital printers. This results in a significant reduction in printing preparation time.

UV inkjet digital printer, AccurioJet KM-1

Planetarium Projector Contributes to Energy Conservation

Planetarium Projector Reduces Energy Consumption by Using LED Light Sources

Konica Minolta's Cosmo Leap Σ is an optical planetarium projector for medium-sized domes. The new projector provides bright stars shining with an energy-efficient and compact design almost equivalent to the Infinium Σ , an optical planetarium developed to showcase the beauty of bright stars shining in the night sky.

By using ultra bright LEDs with optical technology, the stellar images projected on the screen are about 2.5-fold brighter than with the conventional model, but power consumption has been reduced by almost half.

Cosmo Leap Σ

▶ Helping Restore and Preserve Biodiversity through Products	▶ Provision of Product Environmental Information

Upgraded Recycling That Increases the Value of Materials (Application of Recycled Materials)

Konica Minolta views plastic as one of the high-risk materials due to the fact that its raw material, petroleum, is a finite natural resource, and because ocean plastic pollution has become a major public concern. In order to use post-consumer recycled plastic (PCR) for MFP parts, which require a high degree of functionality, Konica Minolta is actively working on technology development to produce upgraded recycled plastic and is expanding recycled plastic use in many products.

Recycling Used PET Bottles and PC Gallon Bottles into an Outer Casing Material for MFPs

Konica Minolta has been striving to develop innovative technologies to recycle various kinds of plastic. In addition to transforming PET and PC plastic from beverage bottles and gallon jugs into exterior materials for MFPs, the company is also recycling ABS resin recovered from used game machines into inner casing materials. The company has developed technologies that ensure that the recycled plastic components have the necessary strength, flame resistance and molding usability. Now, it has taken its chemical processing technology even further. For MFP products launched in fiscal 2019, the percentage of PCR* was raised to about 70% for PC/PET plastic in exterior materials and to about 95% for ABS plastic in inner casing materials. As a result, the use of recycled materials has increased to about 25% for total resin content by weight in the MFP main body.

* Percentage of post-consumer recycling (PCR): The percentage of material collected from the market that is used in recycled raw materials.

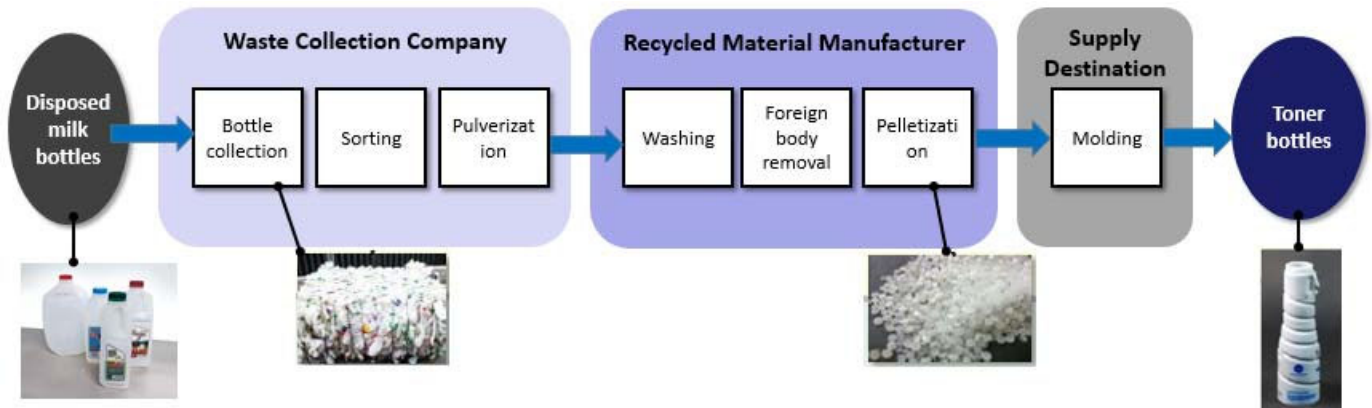

Bizhub C360i series using recycled PC/PET

Recycling Used Milk Bottles into Toner Bottles

Konica Minolta recycles milk containers made from polyethylene and turns them into toner bottles for MFPs. It developed washing technology that removes the smell of milk and minute cells that would lead to quality degradation and established a mass production system in Mexico and Malaysia. The company has succeeded in raising the percentage of PCR in the raw material used for toner containers to 40% and intends to increase it to 100% in the future.

Toner bottles made from recycled material

Milk Bottle Recycling Process

Making Office Equipment Smaller and Lighter

Making products smaller and lighter contributes greatly to reducing raw materials use and energy consumption during production as well as environmental impact during disposal. Through technical development leveraging its core technologies, Konica Minolta is working at reducing the size and weight of its office equipment while increasing their performance. It is also actively pursuing the development of new products with low environmental impact.

Example of a product with compact design launched in fiscal 2019

Space-saving A4 color MFP designed with a small footprint
(420 mm wide and 528 mm deep)

bizhub C4050i

Longer Product Life for Office Equipment

The process unit required for Electrophotographic image forming for MFP has a limited lifespan and sometimes needs to be replaced. Konica Minolta has been working to extend the life of MFP drum units, which is particularly short. With the i-Series it has achieved a 20% longer lifespan compared to a previous model (C368). In addition, by also installing a mechanism to predict when the unit is likely to wear out, the customer can now replace the unit at the optimal point and avoid any image defects.

Conserving Resources with Functional Materials

Making Thinner TAC Films to Protect Liquid Crystal Polarizers

Konica Minolta has drawn on its strengths in film making technology to make increasingly thin TAC film, which protects polarizers in liquid crystal displays. This not only reduces the weight of IT products such as note PCs and smartphones, it also reduces the materials used, thereby contributing to resource conservation.

* TAC: Abbreviation for the substance triacetylcellulose

TAC film

Dramatically Improving Productivity of Polarizer Manufacturers with Obliquely Oriented QWP Film

Utilizing its proprietary optical design technology and the optical properties of cellulosic materials, Konica Minolta has developed obliquely oriented QWP film, which allows users to see the exact colors of images on display even through polarized sunglasses. Furthermore, the oblique orientation of the optical axis eliminates the necessity of cutting the film into sheets and bonding them obliquely in the production process of polarizers. This enables roll-to-roll production of polarizers, thereby helping polarizer manufacturers to drastically increase productivity. Besides enhancing display visibility when viewed through polarized sunglasses, a piece of QWP film also serves as a polarizer protection film, thus contributing to reducing the thickness of displays and the number of parts required for their production.

The image of the “Display with PET film” is an example of how an image can appear when PET (polyethylene terephthalate) film is applied on a display in place of QWP film.

Making Healthcare Products Lighter

Cassette Digital Radiography Systems

The AeroDR series of cassette digital radiography systems is compact, light, and easy to carry around. These products are contributing to the spread of digital radiography (DR), which reduces patients’ exposure to X-rays compared to film radiography and enables the immediate display of high-precision images. As use increased, so did demand for even lighter models.

Accordingly, in December 2016, Konica Minolta launched the AeroDR fine, which, at 2.6 kg, is among the lightest wireless DR detectors.* The grip was improved so that the panel can be easily held with one hand, and the portable DR is now easier to carry around.

AeroDR fine

* As of November 28, 2016, among 14x17 inch wireless portable DRs.

Diagnostic Ultrasound Systems

The SONIMAGE HS1, launched in 2014, has a large market share in orthopedics and is highly regarded in the field of anesthesiology as well, thanks to its superior quality images featuring clear delineation of muscle, tendon, and nerve bundle, and its operability.

The SONIMAGE MX1, released in March 2018, inherits the technology of the HS1, and also features new technology. It is 4.5 kilograms, 43% lighter than the conventional model. *

* Conventional model: SONIMAGE HS1

SONIMAGE MX1

Industrial Inkjet Printers Helping Reduce Use of Natural Resources in Textile Printing Process

Inkjet Textile Printer Reducing Use of Water Resources

The inkjet textile printer does not require the plate making and colored size mixing that is needed with conventional screen-printing. It also contributes to the reduction of resources usage and waste, since it enables on-demand production that uses only the amount of ink and material needed. Compared to conventional screen-printing, it reduces environmental impact significantly, with a 97% reduction in sizing usage, and a 62% reduction in water resources usage.

Nassenger SP-1 inkjet textile printer

Inkjet Press That Saves Resources During Printing

UV Inkjet Press

Rising environmental awareness is driving demands for the field of commercial and industrial printing to break away from conventional methods where large amounts are printed and surplus is discarded. In the world of marketing, meanwhile, labels and packages for each event are being produced in small lots, and product/marketing strategies targeting individual consumers, such as including specific people's names, is gaining ground.

Konica Minolta's digital inkjet printer AccurioJet KM-1 produces high image quality comparable to that of conventional offset printing and can handle a wide range of printing papers. It enables production of printed matter in just the quantity needed, at the time needed, to suit the customer's exact needs. This, in turn, reduces environmental impact by minimizing waste. This solution also helps to reduce the labor-hours needed in the printing process due to its user-friendly operability, even for unskilled workers.

Management of Chemical Substances in Products

▶ Konica Minolta's Approach	▶ Sustainable Green Products Certification System
▶ Saving Energy and Preventing Global Warming through Green Products	
▶ Resource Conservation and Recycling of Products	▶ Management of Chemical Substances in Products
▶ Helping Restore and Preserve Biodiversity through Products	▶ Provision of Product Environmental Information

Management of Chemical Substances Contained in Products

Konica Minolta manufactures and sells office equipment such as digital MFPs and printers, industrial printers, and chemical products such as toner and ink, which are consumables for the aforementioned products, as well as medical devices, measuring instruments, optical components, and performance materials. As chemical substances regulations for products have been tightened around the world, the Group has not only ensured its compliance with the law but also has established internal standards that ensure the environmental performance and safety of products, thereby practicing the appropriate management of chemical substances so that it can grow its business in these diverse products globally.

Compliance with the RoHS Directive*1

Since the European RoHS Directive, which restricts the amount of specified hazardous substances that can be contained in products, came into effect in 2006, voices calling for compliance with the directive have spread to regions other than Europe. The scope of the directive has also been expanded step by step, with medical devices and control and monitoring devices becoming subject to the directive in 2014.

Konica Minolta has managed chemical substances based on the RoHS Directive since the directive first came into effect. In 2011, with the revisions made to the Directive, the Group reviewed its system for the management of chemical substances and made a declaration of conformity with the revised standards.

The RoHS Directive has become stricter due to revisions such as the addition of specific phthalates to restricted substances and the expiry of exemptions. Konica Minolta has already complied with the changes and will continue to grasp the trend of revisions accurately and take systematic steps to remain in compliance.

*1 RoHS Directive: A directive relating to restrictions on the use of specified hazardous substances contained in electrical and electronic devices

Compliance with REACH Regulations*2

European REACH regulations are comprehensive regulations on the management of chemical substances covering registration, evaluation, authorization, and restrictions when using any chemical substances, whether existing or new. The regulations apply to chemical substances included not only in chemical goods, but also various articles (e.g., devices and molded items). Since coming into effect in 2007, they have been put into force in a phased manner.

Konica Minolta systematically registered substances that only have preliminary registration as chemical goods in order to comply with the regulations. Then, it completed registration by the end of the registration period on May 31, 2018. With respect to articles, the company carefully monitors the authorization candidate substances (substances of very high concern [SVHC]) that are periodically added and investigates matters concerning their use as part of the Group's green procurement surveys. The Group properly manages information for articles containing more than 0.1% of a substance and is preparing for database registration of SVHC content information, starting in January 2021.

*2 REACH regulations: Regulation on Registration, Evaluation, Authorization and Restriction of Chemicals

Compliance with IEC 62474

Based on the regulated substances and substance groups that are included in the Declarable Substance List (DSL) of IEC 62474 (Material Declaration for Products of and for the Electrotechnical Industry) created by the International Electrotechnical Commission (IEC), there are standards for prohibited and monitored substances used in equipment products. Konica Minolta's office equipment products do not contain any IEC 62474 Declarable Substances, other than RoHS exempted substances and REACH-SVHC substances.

Prior Check of Substances Contained in Products

In addition to complying with chemical substance regulations in different countries, such as the RoHS Directive and REACH regulations, Konica Minolta has established standards for prohibited and monitored substances used for devices, standards for prohibited and restricted substances used for chemical products, and product safety standards in order to ensure the environmental safety of its products. Based on these standards, the Group verifies the status of parts and raw materials in advance and conducts product assessments right from the development stage, thereby eliminating hazards to the natural environment and people.

Agricultural Support Solutions Using ICT

Konica Minolta jointly established Farm Eye Co., Ltd. with Yanmar Co., Ltd. in 2017. Konica Minolta operates an agricultural consulting business that provides field sensing and image analysis services for agriculture, diagnosis of crop growth, and proposed improvements for agricultural chemical use at Farm Eye.

With drones collecting data, Konica Minolta's optical technology and unique algorithms are used to analyze the field conditions and visualize the growth of crops. In addition, by linking the analysis data with farm machinery, fertilizer can be applied according to the growth situation. The aim is to stabilize the quality of crops and maximize yield, while contributing to the development of the agricultural industry.

Obtaining aerial views of fields using drones

Visualizing the farming situation using sensing technology

Demonstration experiment in Akita Prefecture: Variable fertilizing eliminates growth differences on the farm, improving yield and quality

Chlorophyll Meters Contributing to the Management of Effects on the Environment from Chemical Fertilizers

The chlorophyll meter developed by Konica Minolta easily measures in a non-destructive manner the amount of chlorophyll in crops such as rice, wheat, and corn without damaging the plants. Periodically measuring the amount of chlorophyll makes it possible to practice appropriate fertilizer management according to the growth situation. In this way, Konica Minolta contributes to the implementation of agriculture that is friendly on the surrounding biodiversity by avoiding the effects of over-fertilization on the ecosystem, including the soil and groundwater.

SPAD-502Plus chlorophyll meter

Evaluating Light Sources Related to Plant Growth

LED and organic EL technologies are attracting attention as next-generation lighting products. LED in particular has spread not only to general lighting, but also to plant-growing facilities.

The Spectrophotometer CL-500A produced by Konica Minolta can help manage lighting in plant-growing facilities. It can also measure photosynthetic photon flux density (PPFD) and the illuminance spectral waveform of light sources, in applications related to plant cultivation.

Environmental Labels

Actively providing environmental information about products through environmental labels.

Type I Environmental Labels

Type I environmental labelling refers to labels indicating that an independent certification body certifies that a product has a low environmental impact.

Blue Angel Mark

Launched in Germany in 1978 as the world's first environmental labeling system, the Blue Angel Mark is granted to certify products and services that have a small environmental impact. Since receiving the world's first Blue Angel certification in the field of copiers in January 1992, Konica Minolta has continued to receive certification for new products by clearing the certification bar each time it has been raised.

International Energy Star Program

Products that meet certain standards can be registered as Energy Star devices as part of an energy-saving program for OA equipment that was implemented in 1995 through an agreement between the Japanese and U.S. governments. Almost all of Konica Minolta's office equipment meets the latest Energy Star standards. In fiscal 2019, models with International Energy Star Program certification (*including equivalent models sold in the EU and Japan), accounted for 80.3% of sales of Konica Minolta's imaging equipment products.

Eco Mark

The Eco Mark was established by the Japan Environment Association in 1989 as a standard environmental labeling system in Japan. Konica Minolta's basic policy is to obtain Eco Mark certification for all its office equipment.

China Environmental Labelling

This is China's environmental labeling program, introduced by the Chinese government in 1994. Konica Minolta continues to earn this certification for its IT office equipment.

EcoLogo

Established by the Canadian government in 1988, EcoLogo is one of the most widely respected environmental standard and certification systems in North America. Since earning EcoLogo certification for MFPs in the newly established Office Machines category ahead of the competition in 2009, Konica Minolta has been proactive in obtaining certification.

Hong Kong Green Label Scheme

This environmental standard and certification mark is run by the Hong Kong Green Council, a nonprofit organization. To be certified, products are required to meet stringent standards concerning the reduction of harmful substances and consideration for environmental impact throughout the product life cycle. In March 2011, Konica Minolta received certification for three color MFP models, and they became the first MFPs to be certified. Since then, the company has been obtaining certification for its products proactively.

Thai Green Label

Konica Minolta products have been awarded the Thai Green Label operated by the Thailand Environment Institute in the areas of printers (TGL-37-R1-12) and photocopiers (TGL-27-R3-13). The Thai Green Label was systematized in 1993, and it is a requirement under Thailand's Green Public Procurement as a Type I environmental label based on ISO 14024, which started in August 1994.

Type II Environmental Labels

Type II environmental labeling verifies/certifies the environmental characteristics of a product according to a company's own standards.

Konica Minolta Green Products Certification System

Konica Minolta adopted its Green Products Certification System in fiscal 2011 to evaluate and certify products that have excellent environmental performance. The purpose of the system is to contribute to the reduction of customers' and society's environmental impact by creating environmental value in line with the Group's business and product characteristics, while increasing profits. In fiscal 2017, the company launched a Sustainable Green Products Certification System.

› [Green Products Certification System](#)

Type III Environmental Labels

Type-III environmental labeling provides information on the environmental impact of a product, based on quantitative measurement of environmental impact through the product's entire life cycle, from raw material procurement to production, sales, usage, disposal, and recycling.

Eco Leaf Environmental Label

The Eco Leaf Environmental Label is Type-III environmental labeling, and Konica Minolta has been disclosing environmental impact data concerning its office equipment under this label since 2002, the year when the system was started. Eco Leaf offers a system certification program whereby a third-party institution certifies that a company has mechanisms for the proper and effective gathering of environmental impact data. Konica Minolta has obtained this certification for its copier and printer businesses.

› [Eco Leaf Environmental Label](#)

EPEAT (Electronic Product Environmental Assessment Tool)

EPEAT has been a comprehensive environmental rating that since 2006 helps identify green computers and other electronic equipment. Imaging equipment was added as a new product category in 2013. The EPEAT is managed by the Green Electronics Council, a non-profit organization based in Portland, Oregon. It ranks products as gold, silver or bronze based on 59 environmental performance criteria considering the life cycle of imaging equipment.

In October 2017, Konica Minolta further expanded the scope of its certifications beyond the United States and Australia and acquired Canada's EPEAT certification. Konica Minolta acquired its first "gold" ranking in Australia's imaging equipment category. In fiscal 2019, models with EPEAT certification (*including equivalent models sold in the EU and Japan) accounted for 80.3% of sales of Konica Minolta's imaging equipment products.

› [Information for EPEAT](#)

Products Registered in the Green Purchasing Network

Konica Minolta has registered products that comply with Japan's Green Purchasing Law and the guidelines of the Green Purchasing Network (GPN[®]) in the GPN's online database of environmentally friendly products, and discloses that information.

* Green Purchasing Network (GPN): A network of companies, governments, and consumers established in February 1996 to promote green purchasing initiatives.

Green Printing Certification

The green printing certification functions as a voluntary environmental standard for the printing industry by the Japan Federation of Printing Industries. Certification is granted to the printing plant and to the materials and equipment purchased by the plant. Konica Minolta has received certification for its products in the dry toner digital printer field of green printing materials and equipment category.

Recyclable Printing Materials

Recyclable Printing Materials are materials that do not interfere with the recycling of printed materials and are certified by the Paper Recycling Promotion Center. The purpose of such certification is to expand the use of waste paper, especially printed and information paper. The certification is also reflected in the determination standards for designated printing procurement items under the Act on Promoting Green Purchasing, overseen by Japan's Ministry of the Environment. Konica Minolta has been certified and registered in the area of recyclable dry toners.

Global Organic Textile Standard (GOTS)

In the past there were many systems certifying that the fibers in textiles were organic. An international working group was formed to unify those systems and create an international standard, and as a result, the Global Organic Textile Standard (GOTS) was established in 2005. GOTS has also established safety standards for things such as the inks used in textiles. In 2014, Konica Minolta applied for registration of reactive dye ink as ink that meets those standards. It became the first ink registered with GOTS by a Japanese manufacturer.

Material Safety Data Sheets (MSDS)/Safety Data Sheets (SDS)

Konica Minolta provides Material Safety Data Sheets (MSDS) with information such as the substances contained in a product and handling precautions in order to facilitate the safe handling of chemical products. MSDS are also called Safety Data Sheets (SDS) to comply with international standards.

Article Information Sheets (AIS)

Konica Minolta provides documents with information such as the substances contained in a product and its handling precautions in order to facilitate the safe handling of articles that are not covered by MSDS, such as printing products.

Konica Minolta's Approach

Background and Issues

Today's increasingly urgent environmental challenges require society to use energy and resources more efficiently. There is a limit to the degree of environmental impact reduction that can be achieved solely by one company. Leading global companies should increase their positive contribution to global environmental preservation by expanding the focus of their activities to suppliers of parts and materials, throughout the entire supply chain.

Vision

Konica Minolta will work to make its production processes even more efficient while promoting the development and improvement of production technology, and to reduce both costs and environmental impact. The Group will also share its environmental technologies and expertise with business partners, and will work with them to reduce their environmental impacts. Konica Minolta intends to make significant contributions to protecting the environment throughout its supply chain.

Key Measures and KPIs

Green Factory activities (fiscal 2020—fiscal 2022)

Achieve Sustainable Factory Certification at major production sites worldwide

- Enhancing CO₂ emissions reduction in production activities
- Enhancing effective resource utilization

Green Supplier activities (fiscal 2020—fiscal 2022)

- Enhancing CO₂ emissions reduction at suppliers

▶ **Konica Minolta's Approach** | ▶ Excellent Green Factory Certification System

| ▶ Saving Energy and Preventing Global Warming in Production Operations

| ▶ Resource Conservation and Recycling in Production Operations

| ▶ Reduction of Chemical Substances Risks in Production

▶ Addressing Biodiversity in Production Activities (Consideration of Water Resources and Wastewater, Proper Management of Greenery at Factories)

| ▶ Green Supplier Activities | ▶ Green Procurement System

Initiatives in Production

Konica Minolta's Green Factory Certification System aims to reduce both environmental impact and operating costs. All production sites had achieved the highest standard (Level 2) by fiscal 2015. Moving forward, the company launched its Excellent Green Factory Certification System in fiscal 2016. An Excellent Green Factory is a site that has achieved the system's certification standard of reducing CO₂ emissions from external sources by an amount equivalent to 10% of its own emissions by working in unison with suppliers, customers, and communities. This is in addition to complying with the previous certification standards for reducing environmental impacts from internal sources.

Fiscal 2019 Green Factories Activity Results

In fiscal 2019, the Group's goal was to achieve Excellent Green Factory certification for all its primary production sites worldwide. Eight new sites achieved the certification, and now there are nine primary Excellent Green Factories (4 in Japan, 2 in China, 1 in Malaysia, 1 in the United States, and 1 in France). In addition to its internal environmental activities, each production site also develops its own improvement measures for suppliers and customers through factory tours and environmental seminars. The sites also help reduce CO₂ emissions outside the company by visiting partner facilities and working with them to investigate and implement measures to reduce environmental impact.

Konica Minolta Business Technologies (Malaysia) Sdn. Bhd. was certified as an Excellent Green Factory in September 2019

CO₂ Emissions Reduction Effect during Production

(Thousand tons)

*The amount of reduction is calculated by subtracting the actual fiscal 2019 emissions amount from the estimated amount of emissions that would be produced if environmental conservation activities had not been implemented since fiscal 2005.

Thanks to these efforts, in fiscal 2019, a CO₂ emissions reduction of 109 thousand tons was achieved, along with a waste reduction of 18 thousand tons, both in the production stage compared to fiscal 2005 levels. This resulted in a total cost savings of 6.9 billion yen.

Waste Reduction Effect during Production

Promoting Energy Savings at Production Sites

In line with its Green Factory certification system for comprehensively evaluating environmental activities at production sites, Konica Minolta strives to increase energy productivity and to reduce CO₂ emissions from production operations through a variety of measures.

Energy Conservation Support Program

Konica Minolta has implemented an Energy Conservation Support Program in order to promote the reduction of CO₂ emissions at production sites. Under this program staff members within the Group who are experts in process design, production equipment design, and energy management visit production sites and conduct inspections of everything from the energy management situation to the status of utilities and production equipment such as air conditioning and boilers, based upon which they recommend measures suited to each site. Using these recommendations, the expert staff and personnel at each site conduct simulations of the energy-saving effects, which help with implementing the measures.

Energy Conservation Support Program

Examples of Main Measures

Improve productivity	Industrial engineering (IE) work analysis, yield rate improvement, installation of automatic machines, takt time reduction, production space optimization
Optimize equipment operation time	Shutdown during downtime, reduction of standby power consumption
Reconsider air conditioning operation	Temperature setting optimization, operating time optimization
Save energy in lighting	Thinning out lighting, conversion to high-efficiency lighting
Save energy in molding machines	Infrared heating, installation of servo motors, cylinder insulation
Save energy in compressed air	Installation of inverters, limited number of units, air pressure optimization
Reconsider refrigerator operation	Refrigerator integration, reconsideration of exit temperature setting
Use waste heat	Heat exchange at exhaust/intake, reduction of steam production by using waste heat from dehumidifiers
Reduce heat radiation loss	Steam piping insulation, piping integration, reduction of valve leaks

Participation in RE100, Which Aims to Run Businesses with 100% Renewable Energy

In January 2019, Konica Minolta joined RE100, a global leadership initiative that brings together businesses committed to sourcing 100% renewable energy for their operations.

Konica Minolta aims to procure 100% of the power used in its own business activities from renewable energy sources by 2050. By doing so, Konica Minolta will accelerate its efforts to achieve Eco Vision 2050 while also helping to reduce global CO2 emissions by expanding the use of renewable energy. As a medium-term step toward achievement of its long-term goal, Konica Minolta set an internal target of sourcing renewable electricity for 30% of its electricity use by 2030. The Group will start reviewing its power procurement contracts one-by-one at production sites and sales sites, starting with countries and regions where renewable electricity is relatively widespread, and begin switching over those sites to renewable electricity where it is possible. In fiscal 2019, the renewable electricity usage ratio*1 was raised to 5.3%.

At Konica Minolta Business Technologies (Wuxi) Co., Ltd., one of Konica Minolta's MFP production sites in China, 100% of the energy consumed has come from renewable energy sources since 2020. In January 2020, the company installed a solar power generating system (25,000 m2 footprint, 1.7 MW power generating capacity), accounting for about 16%*2 of power usage and, at the same time, it switched the source of the remaining power to power purchased with green power certificates.*3 As a result, the manufacturing site now sources 100% of its energy from renewable sources. It is the second Konica Minolta Business Technologies facility in China to achieve this milestone, following the Dongguan site in January 2019.

Konica Minolta will adopt the optimal method for each world region, starting with manufacturing sites such as the aforementioned site in China, in order to strengthen its efforts to expand energy procurement from renewable sources.

*1 Ratio of renewable energy-derived electricity to the total purchased electricity of the Konica Minolta

*2 Achievements from January 2019 to December 2019

*3 I-REC certification that can be used domestically in China (International Renewable Energy Certificate)

Examples of Initiatives

Pursuing Energy Savings by Reviewing the Operation of Clean Rooms with High Energy Loads (Konica Minolta Business Technologies (Dongguan) Co., Ltd.)

Konica Minolta Business Technologies (Dongguan) Co., Ltd., which manufactures MFPs and other products in Dongguan, Guangdong Province, China, has achieved dramatic energy savings by conducting reviews of the operational status of clean rooms with high energy loads in the factory. Specifically, it took another look at the temperature and humidity conditions while keeping them within product specification requirements, optimized the ventilation frequency while maintaining cleanliness, reduced clean room equipment operating time by installing a timer, and reduced clean room floor space through layout review. The implementation of these measures has saved energy used by cold energy source equipment and ventilation equipment. In addition, in November 2017, full-scale use of renewable energy began, with the installation of photovoltaic equipment on the roof of the plant, and in 2019, the share of electricity consumption from renewable energy sources reached 100%. These measures have greatly contributed to the Excellent Green Factory Certification System, the Konica Minolta accreditation system launched in fiscal 2016.

Konica Minolta Business Technologies (Dongguan) Co., Ltd.

Energy Savings through Smaller Production Space and Shorter Production Time (Konica Minolta Business Technologies (Wuxi) Co., Ltd.)

Konica Minolta Business Technologies (Wuxi) Co., Ltd., located in Jiangsu Province, China, has adopted industrial engineering (IE) work analysis as a new endeavor aimed at reducing environmental impact through increased productivity. The analysis is based on specialized analytical knowhow cultivated in Japan by Konica Minolta. By thoroughly reconsidering operability and line of flow of production lines, the company reduced production space, shortened production times, and cut energy consumption, including air conditioning and lighting. In addition, all its power now comes from renewable energy sources. This was achieved by installing a solar power generation system in January 2020, and then using green power certificates to meet its remaining electrical needs. The company has become a corporate leader for environmental protection in China, and was certified by the city of Wuxi as a “Clean Manufacturing Company” in 2017.

Konica Minolta Business Technologies (WUXI) Co., Ltd.

Utilizing Waste Heat from Production and Curbing Heat Dissipation to Ensure Energy Conservation (Konica Minolta Supplies Manufacturing Co., Ltd.)

With its head office in Kofu, Yamanashi Prefecture, Konica Minolta Supplies Manufacturing Co., Ltd. makes developers and photosensitive drums for multi-functional peripherals (MFPs). The company has achieved sharp reductions in energy consumption by utilizing the waste heat from the toner production process and curbing the heat dissipation from steam pipes.

Heat exchange with high-temperature water is typically used, but the company actively uses the waste heat from low-temperature water generated in the toner production process through heat exchange and produces heated water to be used in other processes. This significantly reduces the gas consumed to produce heated water. The company also installed an automated control system to supply steam only when and in amounts needed to prevent heat from dissipating from the pipes.

In addition, outside air is used for drying, but the amount of air required differs significantly depending on fluctuations in the humidity of the outside air. The company controls the dew point of the outside air sucked in constantly, then curbs the blower's air volume and number of rotations to conserve energy. It has also upgraded from NAS batteries to large-capacity lithium ion rechargeable batteries in order to adapt to momentary power interruptions and power outages. As a result, heaters no longer have to be used, conversion loss has been reduced and efficiency has improved, delivering significant energy conservation.

Kofu head office at Konica Minolta Supplies Manufacturing Co., Ltd.

Pursuing Energy Savings with High-Efficiency Air Conditioning Systems and Other Energy-Saving Measures (Konica Minolta Business Technologies (Malaysia) Sdn. Bhd.)

Konica Minolta Business Technologies (Malaysia) Sdn. Bhd., which assembles MFPs, has achieved major energy savings by actively employing high-efficiency air conditioning systems.

Since Malaysia is a tropical country where air conditioning use is high, the company has installed a large-temperature-difference air conditioning system and a temperature-stratified air-conditioning system and thus has reduced electricity consumption compared with conventional air conditioning.

In the areas between each factory building, dedicated individual air conditioners had been required, but individual air conditioners were discontinued by supplying surplus cold air from air conditioners in other processes.

Furthermore, in the resin molding process, vented cylinders were installed to remove the moisture and gas contained in resin, during the process. As a result, the drying step that was required before resin could be utilized is no longer necessary, resulting in significant energy savings and improved productivity. In this way, the company has promoted high-efficiency air conditioning operations throughout the plant, along with production process improvements.

Konica Minolta Business Technologies (Malaysia) Sdn. Bhd.

TOPIC: Installing a Gas Turbine Cogeneration System That Provides High Energy Efficiency by Effectively Using Exhaust Heat

On February 1, 2017, the Konica Minolta Kobe Site began operating a gas turbine cogeneration system that uses city gas as fuel. This system provides distributed power generation (7,000 kW class power generation output) that generates power in the places where energy is needed. By effectively utilizing exhaust heat generated at that time, it is possible to achieve overall efficiency at a high 80-90% energy efficiency (general thermal power plants are at about 40%), which greatly contributes to energy saving and CO₂ emission reduction.

Gas turbine

This system is superior from the standpoints of both energy saving and environmental preservation because the fuel uses city gas with high combustion efficiency and low impurity, generates virtually no dust or sulfur oxides, and generates low amounts of nitrogen oxides thanks to the latest low-NO_x combustion technology.

Boiler

Primary Advantage of Installation

CO₂ reduction: CO₂ reduction of 20% or more compared with previous methods

Peak cut: Leveling of electricity demand: Electric power peak cut rate is 70%

BCP: The system supplies power to the premises critical load in the case of emergency

Subsidies: Subsidy support was received from the Energy Use Rationalization Business Support Program, in recognition of the high energy savings of the installed equipment.

At this site, the company has continued to install energy-saving equipment, streamlined product manufacturing processes. The operation of this system is positioned as the core of the energy saving and CO₂ emissions reduction plan in the Medium-Term Environmental Plan 2019.

TOPIC: New Environmentally Friendly Research Building SKT

The new R&D building (SKT) opened in April 2014 at Konica Minolta Tokyo Site Hachioji integrates environmental facilities that will contribute to environmental impact reduction, including solar panels on the roof, an atrium that brings in lots of natural light, daylight sensors to reduce lighting electricity consumption, effective natural ventilation, and use of well water. As a building with excellent environmental friendliness, SKT received the highest certification, "Class S," in the Comprehensive Assessment System for Built Environment Efficiency (CASBEE), which is an evaluation of the environmental performance of buildings led by Japan's Ministry of Land, Infrastructure, Transport and Tourism. The building also won a fiscal 2014 Good Design Award from the Japan Institute of Design Promotion (JDP).

Promoting Resource Conservation and Recycling at Production Sites

Konica Minolta has implemented a variety of measures to reduce and recycle waste generated from production operations and is striving to reduce the amount of waste discharged, with the aim of creating a recycling-oriented society.

Examples of Main Measures

Reduce material loss	Improvement in materials, parts, and product yield rates
Reduce packaging materials	Switching to simple packaging, increasing quantities inside packages
Reuse packaging materials	Switching to reusable shipping containers within the company, between production sites, and with parts suppliers
Reduce mold scrap	Adoption of dies with no molding scrap, minimization and internal recycling of molding scrap
Reduce press scrap	Minimization of feed pitch
Reduce support materials	Reuse of cleaning solvents, reuse of molding machine oil
Reuse pallets	Switching to reusable pallets with parts suppliers, changing the size of pallets for parts and using them to ship products

Examples of Initiatives

Reducing the Amount of Waste Discharged by Applying the 3Rs to Plastic Mill Ends

Konica Minolta makes an active effort to apply the 3Rs (reduce, reuse, and recycle) to the mill ends generated at production sites in the molding processes for plastic parts. Konica Minolta Business Technologies (WUXI) Co., Ltd. and Konica Minolta Business Technologies (Dongguan) Co., Ltd., which are companies producing business technologies products in China, reduced their use of plastic raw material by developing and installing molding dies that do not generate mill ends.

They reduced the material input through the use of hot runners in molding dies, the minimization of runner sizes, and the pulverization and reuse of runner mill ends. Then, they made effective use of unneeded mill ends as material in such things as parts racks used in factories and parts boxes used in the shipment of parts from suppliers.

Reducing Packaging Material Waste

Konica Minolta is making efforts to reduce the disposal of packaging materials used at production sites when procuring materials and parts. For instance, it has simplified packaging, such as switching from stretch film for wrapping parts boxes together to packing belts that can be reused, and it has reduced the amount of packaging materials used by changing the number of units purchased when procuring materials to increase the number of units packed into boxes. Additionally, it has changed parts boxes from cardboard to reusable foldable boxes made using mill ends recycled from plastic parts. It also does not dispose of packaging cushioning, but instead returns it to suppliers for reuse, in order to reduce waste discharge. Konica Minolta Business Technologies (Malaysia) Sdn. Bhd., which assembles MFPs in Malaysia, uses ABS plastic recovered from used game machines as a material for containers used in procurement and in-process transport in an effort to efficiently use resources. In an effort to streamline logistics, Konica Minolta Business Technologies (Malaysia) established a Smart Industry Center (SIC) in January 2018, which brings together major suppliers in a suburb near its plant. The aim is to reduce packaging and make more effective use of resources. This is done by adopting recycled ABS resin for shared plastic pallets used when parts are delivered within the SIC and to the factory.

Reducing Wastewater Discharge

The Group is actively working to reduce wastewater generated in production processes. Konica Minolta Chemical Co., Ltd., which produces chemical products in Japan, is working to reduce the volume of its wastewater discharge. It is doing this by concentrating waste liquid using its own distillation equipment and treating some of the wastewater at the company's own wastewater treatment facility.

Lowering Defect Rates Using Production Data

Konica Minolta is striving to improve its product defect rates by utilizing various data gathered from production facilities for quality improvement. Konica Minolta Mechatronics Co., Ltd., the mother plant for Konica Minolta's digital manufacturing, is collecting various data by monitoring production equipment and product inspections as necessary. This enables the detection of data parameters that strongly correlate with the occurrence of product defects. By checking for changes in these parameters, the company aims to achieve highly efficient manufacturing that helps prevent the occurrence of defects. Implementation of these efforts is being accelerated at all Konica Minolta production sites.

Basic Concept

Working on reducing chemical risks based on the concept of the precautionary principle

There is international consensus on the need for companies that manufacture and use chemical substances to take steps to minimize the adverse effects of chemicals, not only on human health, but also on the environment. Based on this shared perception, many countries around the world are revising their regulations concerning chemical substances. Having taken a position in advance of this new international current, and based on a concept known as the "precautionary principle," Konica Minolta has focused on enhancing its advance evaluation of chemical risks, reducing the emission of harmful substances into the atmosphere, and eliminating hazardous substances from production processes and products to improve safety management for workers and product users.

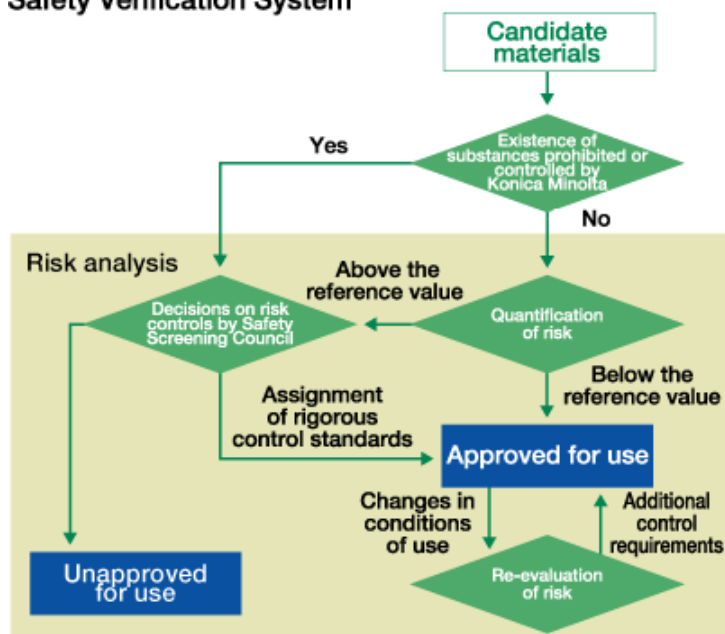

Prior Risk Assessment of Chemical Substances

Using its unique safety verification system to achieve the appropriate management of chemicals

Risk assessment of candidate materials using a safety verification system

Konica Minolta has established a safety verification system that assesses the risk of candidate materials when considering the use of new chemicals in the process of creating products. Using this system, the Group practices appropriate management based on comprehensive chemical risk assessment in terms of product safety, environmental safety, and work safety.

Safety Verification System

Designation of prohibited and restricted chemical substances

Konica Minolta designates prohibited and restricted chemicals based on its own criteria in order to eliminate chemicals with unacceptable hazards in the prior risk assessment carried out before the adoption of a chemical substance. These criteria include not only chemicals regulated by law, but also chemicals recognized as significantly hazardous by specialized institutions.

Calculating risk points for chemicals

Konica Minolta calculates points for the hazard risk of substances based on a unique calculation method used in its safety verification system. This quantifies the hazardousness points based on three factors: (1) type and degree of hazardousness; (2) level of safety measures; and (3) amount used. Using these numbers, it is possible to compare different types of risks—such as the danger of an explosion or serious health effects such as carcinogenicity—on the same scale. In this way, Konica Minolta quantitatively assesses the potential risks of hazardousness in chemicals.

Risk management that envisions substance usage

Since risks differ depending on the form of exposure, Konica Minolta classifies substances into four categories that envision usage, ranging from use under strict safety controls (e.g., at production sites) to use by the general public, which cannot be assumed to take safety measures. It then specifies safety requirements according to the different risks in order to carry out more practical risk management.

When there is a necessity to use highly hazardous chemicals, Konica Minolta holds a safety determination meeting to stipulate rigorous management conditions for minimizing risks in terms of procurement, storage, handling, and disposal.

Risk assessment during continual use

Even after incorporating a chemical into the production process following risk assessment, Konica Minolta checks periodically to make sure that there are no changes in the amount used or the conditions of use. If there are any changes, a risk assessment is performed again to ensure appropriate management.

Reducing and Fully Phasing out Chemicals

Reducing VOCs based on Konica Minolta's own risk management indicators

Konica Minolta assesses risk based on a chemical's hazardousness and amount of use and is committed to finding alternatives and reducing those substances judged to have a high risk. Since 1993 it has been making efforts to reduce atmospheric emissions of volatile organic compounds (VOCs) from production sites worldwide. It identified VOCs with particularly high risks for full phase-out, and has maintained the full phase-out status for those identified items.

Reducing atmospheric emissions of VOCs

Konica Minolta is systematically reducing VOCs in line with its own environmental impact index, which multiplies the impact on the human body and the environment by a location coefficient as a management indicator. Each site has established reduction goals in line with the Green Factory Certification System and is working to achieve them.

Atmospheric VOC Emissions (Environmental impact index)

► Standards for Calculating Environmental Data

Calculation of Environmental Impact Index

	Hazard coefficient	Example of substances
Substances that pose a risk to human health	×100	1, 2-dichloroethane
Substances that pose a risk to ecosystems	×10	dichloromethane, ethyl acrylate, n-heptane
Substances that pose a risk of atmospheric pollution		
Substances that pose a risk of having an indirect adverse impact on the environment	×1	isopropyl alcohol, methanol, ethanol, acetone, ethyl acetate

* Environmental impact index: An index unique to Konica Minolta.

Environmental impact index (point) = Atmospheric emissions of VOCs [t] × Hazard coefficient × Location coefficient

Hazard coefficient: Set at 1-fold, 10-fold, or 100-fold depending on the severity of the impact on human health and the environment (set independently by Konica Minolta based on the coefficient used in the safety evaluations conducted by Kanagawa Prefecture in Japan)

Location coefficient: Outside the industrial park: 5; inside the industrial park: 1

Substances for Which Konica Minolta Achieved a Full Phase-Out

Konica Minolta earmarked the VOCs below for full phase-out, having judged them as having an especially high risk based on the hazardousness and amount of use of each substance and made systematic efforts from early on toward that end. Those efforts resulted in the achievement of a full phase-out in fiscal 2010, which has been maintained ever since.

Countermeasures against Contamination of Soil and Ground Water

Striving to manage the state of contamination through regular monitoring, to facilitate cleanup, and to prevent the spread of contamination

Konica Minolta has implemented countermeasures at sites where soil or ground water contamination has been identified to ensure that the contaminants do not affect the surrounding environment. This is followed up by periodic observation and strict management.

The Group has organized a specialist team to manage remediation of polluted sites and to prevent the spread of contamination. Detailed surveys conducted under the team's supervision serve as the basis for developing countermeasures and examining suitable purification technologies.

The Group reports the results of its observations and remediation efforts to local government agencies.

› [Summary of Contaminated Soil or Ground Water at Operation Sites](#)

Dealing with Asbestos

Konica Minolta is conducting a survey into the usage of sprayed asbestos in the buildings of all its sites and affiliated companies in Japan. As of March 2014, it had confirmed that there are no health risks due to exposure. Going forward, it will continue to maintain and manage this situation while systematically removing the asbestos.

Dealing with PCBs (Condition of Storage)

Konica Minolta takes steps for the proper storage and management of PCB wastes kept in all its sites and affiliated companies in Japan. It also reports the condition of storage to the government in accordance with the law. Since 2007, it has been commissioning the disposal of wastes with high concentrations of PCBs to JESCO.* From here on the Group will continue to dispose of the waste as soon as possible according to JESCO's capacity to take in batches. Since fiscal 2012, it has also been gradually disposing of waste with low concentrations of PCBs, in light of the certification status for treatment.

* JESCO: Japan Environmental Storage & Safety Corporation

Condition of Storage of PCB Waste in Japan (March 31, 2020)

Stored items	Unit	Quantity Figures in parentheses indicates low-concentration PCBs
Transformers	Units	4 (4)
Capacitors	Units	6 (6)
Fluorescent ballasts	Units	273 (0)
Other devices	Units	1 (1)
PCB oil	kg	285 (0)
PCB pollutants	kg	941 (916)

Consideration of Biodiversity at Production Sites

Carrying out efforts in accordance with the Guidelines for Biodiversity Preservation

Under its long-term environmental target, Eco Vision 2050, Konica Minolta is committed to the restoration and preservation of biodiversity. The Group has identified how its business activities worldwide depend on ecosystem services and the impact they have on those ecosystems. It did this by utilizing the Corporate Ecosystem Services Review (ESR) developed for the Millennium Ecosystem Assessment, a major study initiated by the United Nations concerning human impact on the environment. A relationship map was created, summarizing the benefits ecosystems provide to Konica Minolta's business activities and the impacts of the company's activities on those ecosystems, for each stage of the product life cycle. The map was used for evaluation, and specific issues were identified for Konica Minolta to address. This evaluation and identification process incorporated the opinions of third parties, including Japan's Ministry of the Environment and another expert organization. Konica Minolta is working to preserve biodiversity as part of its unique Excellent Green Factory Certification System for comprehensive evaluation of the environmental activities of its production sites. In April 2011, it established Guidelines for Biodiversity Preservation, which outline targets and standards for preservation activities identified as having a high impact on biodiversity and benefitting ecosystems supporting business activities. Compliance with these guidelines is required, and efforts are made to reduce water intake within the certification system.

Guidelines for Biodiversity Preservation

<Consideration of water resources>

- Reduction targets are set for total water consumption, or for water used on site, and reduction measures are implemented
- If groundwater is used, measures must be taken to reduce the amount used

<Consideration of wastewater>

- In order to prevent ecological damage to rivers and lakes, a risk management system must be established to eliminate highly polluted wastewater
- Checks are in place to determine the impact on ecosystems such as aquatic habitats of wastewater emitted into public water areas

<Proper management of greenery at factories>

- Invasive alien species that are likely to have a negative impact on ecosystems are not planted or sown on the factory's premises
- When planting trees on factory grounds, management and protection must be accorded to any rare species that are discovered

Consideration of Water Resources

Konica Minolta monitors and manages the volume of water use at each site and strives to reduce its total water consumption in line with the reduction targets it has established.

In initiatives for the Excellent Green Factory Certification System, Konica Minolta's key production sites around the world are currently working to reduce water intake to meet targets for reduction of water consumption. To be certified under this system, a factory must reduce its water intake per unit of production by 8% compared to 2015. This standard has been applied to the Group's major production sites around the world. The target was to reduce water intake by 378,000 cubic meters compared to 2015, before the end of fiscal 2019. As a result of various initiatives at each production site, Excellent Green Factory certification was achieved at nine sites, and in fiscal 2019 the Group's water intake was down by 409,000 cubic meters compared to 2015.

As part of these initiatives, Konica Minolta's key production sites reviewed their use of water in plants and worked to make reductions. These efforts included measures to reduce the volume of heated water used and the energy required to produce the heated water, such as changing temperature controls to only steam rather than a two-stage control process involving steam and hot water during in-process regulation of reaction temperatures. In addition, after considering the impact on users and the backup system in the event of problems, the sites decided to reuse drain water, which has relatively few impurities and is easy to reuse, as a supplementary feed for the cooling tower. The sites are also working to save water through other detailed efforts. These include reducing tool cleaning frequency by coating mesh surfaces on tools so material is less likely to adhere, and moving away from equipment cleaning using water to air blowing devices. Moreover, sites are collecting rainwater for use in cooling towers. They are also working to efficiently use water resources outside of the production process as well through measures such as installing water-saving faucet valves, checking for leakage from piping and repairing piping damage.

In fiscal 2013, the Group adopted an analysis method using the World Resources Institute's (WRI)^{*1} Aqueduct^{*2} to conduct a comprehensive risk assessment on usage of water resources at the Group's production sites and R&D sites and major suppliers around the world. Every year since, the results have confirmed that the Group has no sites with an extremely high risk. One Group site is rated as having high water stress, but sales from this site accounted for less than 1% of total Group sales. In fiscal 2019, the water intake at this site was 93,000 cubic meters, and its water consumption was 14,000 cubic meters. With the goal of reducing its annual water intake by 5,700 cubic meters, the plant installed water-saving faucets and worked to reduce product cleaning water by improving manufacturing yield. As a result, intake was reduced by 9,800 cubic meters in fiscal 2019. In the future, the Group will continue to conduct water risk assessments when establishing new sites and changing the business environment, and it will take measures to reduce water use as necessary.

Additionally, production sites that use groundwater as their main intake source are making efforts to reduce the amount of groundwater used, such as by turning off the supply of cooling water when production is stopped.

*1 WRI (World Resources Institute)

*2 Aqueduct: World maps and information showing the latest water risks published by the WRI. Produced based on 12 key water risk indicators such as physical water stress and regulatory risk related to water resources.

Consideration of Wastewater

Konica Minolta regularly conducts compliance assessments on a global basis to confirm the status of compliance with laws, ordinances, agreements, and other relevant regulations related to effluent, with the aim of preventing water pollution from effluent.

The Group has assessed the effect of effluent on the ecosystem at production sites that release effluent used in the production process into rivers. It adopted WET,* a new effluent management method using bioassays that is gaining worldwide attention, when conducting the assessments. With the cooperation of Japan's National Institute for Environmental Studies, the Group conducted tests using three aquatic species (algae, crustaceans, and fish). The results indicated that there was no negative impact (algae: inhibition of growth; crustaceans: inhibition of breeding; fish: reduced hatching rate or reduced survival rate after hatching) on any of the three test organisms.

* WET (Whole Effluent Toxicity): A method that assesses the aggregate toxic effect of wastewater on aquatic life rather than the evaluation of individual chemical substances. Unlike conventional effluent management methods, it enables holistic assessment of the effect of an effluent, detecting impact caused by any non-regulated chemical substance or the combined impact of multiple substances.

Proper Management of Greenery at Factories

Konica Minolta practices proper management of greenery on the grounds of the Group's production sites. By preparing greenery management lists for each site and conducting periodic checks, it makes sure that there are no invasive species, including sowing seeds.

Additionally, when rare species are discovered at a site, efforts are made to protect the species by making employees and visitors aware of its presence by putting up signs and fences. For instance, the Tokyo Site Hino is managing and protecting Golden Orchid (*Cephalanthera falcata*) and Japanese Lily (*Lilium speciosum*), which are endangered species.

Golden orchid at the Tokyo Site Hino

Consideration of Biodiversity in Procurement

As part of its procurement activities, Konica Minolta aims to help realize a sustainable society. To do this it is building strong relationships with business partners to fulfill corporate social responsibilities, based on transparency and fairness. In order to reduce the impact of its procurement activities on the ecosystem, Konica Minolta has set an example by implementing a green procurement policy. It has established a Supplier Code of Conduct and is asking business partners to adhere to its principles in order to minimize the depletion of natural resources.

The Group also provides suppliers with the environmental technology and expertise that it has cultivated in its Green Factory activities, thereby promoting Green Supplier initiatives that reduce both environmental impact and costs. As part of these activities, environmental experts from Konica Minolta visit suppliers to advise them on measures to reduce water usage. Konica Minolta also uses its CSR Procurement Promotion Program to require suppliers to properly manage their water use by adhering to the Konica Minolta Code of Conduct for Suppliers.

Konica Minolta Japan, Inc., a sales company in Japan, has established the PPC Paper Purchase Standards, which have been implemented since 2007. The Standards stipulate that copy paper supplied to customers should be procured by taking into account the impact of forest destruction and degradation on the living environments of animals, plants, and people.

Green Supplier Activities

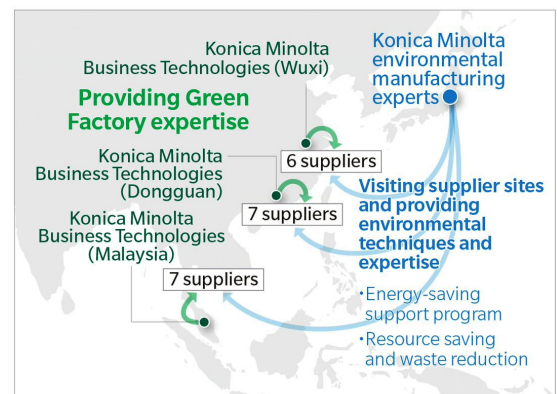

Overview of the Activities

Konica Minolta conducts Green Supplier activities to reduce both environmental impact and operating costs by providing suppliers with environmental technologies and expertise that it has developed via its Green Factory activities. Konica Minolta’s environmental experts visit supplier production sites and propose suggestions for improvement, outlining cost reduction benefits, investment rationale, and other information. They then cooperate with suppliers as they take action to reduce their environmental impact.

Fiscal 2019 Activity Results

In fiscal 2019, Green Supplier activities were initiated with six new companies, bringing the total number of companies Konica Minolta is working with to 23. Starting in fiscal 2019, the Group began trials of new Green Supplier activities that do not involve supplier visits. Instead, an energy-saving diagnostic tool is used, based on the digitized expertise of energy-saving experts. By the end of fiscal 2019, a total of 14 companies had achieved their Green Supplier activity targets, which are equivalent to the level of the Green Factory Certification Standards.

Green Supplier Activity Targets

Issue	Management Index	Target (2.5 years after activity launch)
Prevention of global warming	CO ₂ emissions	5% reduction (compared to the last year before activity launch)
	Energy costs	5% reduction (compared to the last year before activity launch)
Waste reduction	External discharge quantity	12.5% reduction (compared to the last year before activity launch)
	Material / waste costs	Cost reduction greater than waste expenses
	Final disposal rate	0.5% or less
Reduction of chemical risk	Reduction of chemical risk	Compliance with chemical substance guidelines

Voice of a Supplier | Guppy Plastic Industries (Penang) Sdn. Bhd.

Our environmental conservation activities started with small and simple activities since our inception days. Our program continues internally and later on, enhanced to include involvement with external parties such as the local council, schools, and the public. The program included city beautification, zero waste, and school beautification.

Recent years are showing the rise of the negative impact to the environment from plastic products. However, we as plastic injection moulding manufacturer remained positive in our position as a diversified supplier in supplying to various industries.

Green Supplier Activity by Konica Minolta has given us the opportunity to further enhance our program to higher level. The program will support us in meeting our goal which also aligned with our environmental policy that is to contribute toward environmentally sustainable development.

We have shared good practices and gained additional knowledge from the Konica Minolta team and appreciate the exposure of the new ideas and methodologies introduced in implementing waste elimination. We look forward for continuous support from Konica Minolta in our journey to improve the quality of life for our employees, business partners, and future generations.

BK Goh
Managing Director
Guppy Plastic Ind.
Sdn. Bhd.

Voice of a Supplier | Well King Plastic Manufacturing Co., Ltd.

We view environmental conservation as an extremely important initiative in the context of China's recent pursuit of rapid economic growth and the advancement of its manufacturing industry. Konica Minolta's Eco Vision 2050 is aimed at sustainable growth, which is an approach that matches the course we wish to follow.

In the manufacturing industry, resource and energy consumption increase with business expansion and rises in production. This is why I believe that the "waste elimination activities" we worked on as part of the Green Supplier activities are essential for a growing manufacturing industry. Moreover, Konica Minolta's sharing of its environmental expertise enabled us to reduce our environmental impact while increasing our performance, giving us the experience of simultaneously contributing to the environment and supplying competitive products.

We will continue to practice environmental conservation and energy reduction activities and will do our best to pursue sustainable development in collaboration with Konica Minolta.

Happy Tsai
President
WELLMEI HOLDING CO., LTD.

Voice of a Supplier | Szepak Precision (Wuxi) Co., Ltd.

Through the Green Supplier activities, we received a wealth of advice on things such as energy conservation, resource reduction measures, and calculation methods. Thanks to Konica Minolta, we were able to take the first steps toward environmental contribution. For environmental measures requiring investment, we received proposals from a management perspective, including measures sorted into short-, medium-, and long-term investments, as well as by depreciation period. The government also has several requirements for environmental conservation measures, and we were able to work even more positively on them by pursuing the Green Supplier activities. In the future, we would like to develop self-diagnosis mechanisms while applying diagnostic tools from Konica Minolta.

Yushi Ueda
Director / General Manager
Szepak Precision (Wuxi) Co., Ltd.

Voice of a Supplier | Allied Technologies (Saigon) Co., Ltd

In our daily lives, we receive much information about global warming, the greenhouse effect, and CO₂ emissions, which are contributing to environmental risk with rising temperatures, rising sea levels and extreme weather conditions that affect the lives of human beings and other living organisms around the world.

Konica Minolta introduced the Green Activity program at Allied Vietnam in 2015. Through the Green Activity program, my team has been introduced to the benefits these activities can have for the company. We understand that it can contribute to cost reduction, increased sales opportunities, reduced business risk, and the environmental awareness of every employee.

Through the program, Konica Minolta, working with Allied, evaluated ways to save energy and reduce waste, took productive measures to make plans, and executed to meet the targets set. This, in turn, met the wider goal of working to curb global warming and supporting a recycling oriented society.

During the activity, Konica Minolta continuously shared with Allied many methods for reducing energy use, and also shared their experience with best practices to enable us to execute the program effectively.

Moving forward, Allied will continue to sustain the activities that are in place, and will also continue to make plans for reducing energy and recycling waste, working to be part of a company that exercises its social responsibility to the community.

Tung Gee Khim
Group Operation Manager
Allied Technologies (Saigon) Co., Ltd.

Voice of a Supplier | Changhong Technology Co., Ltd.

As part of the Green Supplier activities, Konica Minolta environmental manufacturing experts visited our production site, and we discussed environmental measures for molding machines and utilities use. Preparing for the actual implementation of the suggested measures, we visited a Konica Minolta production site in China, and we were able to address our situation while discussing specific ways to proceed. The local government places great importance on energy-saving activities, and we received a monetary incentive after reporting the energy-saving initiatives we took through the Green Supplier activities. We were able to reduce our emissions by 800 tons per year, and also contributed to CO₂ emissions reduction in China.

Xu Yanping
President
Changhong Technology Co., Ltd.

Visiting a Konica Minolta site to see environmental measures

Voice of a Supplier | Toyo Communication Technology (Shenzhen) Co., Ltd.

I think the biggest feature of the Green Supplier Initiative is the way in which Konica Minolta is committed to coming into suppliers' sites and working with them to make improvements.

Indeed, the people who visited our factory did not just bring the methods cultivated in Japan as-is; rather, they thought together with us about what kinds of measures we need. This method improved the motivation of our employees, and an attitude of thinking on one's own and devising improvements started to spread throughout the company.

Going forward, we are determined to keep cooperating with Konica Minolta to form and implement environmental plans and measures, and foster a system and culture that values environmental management.

Lou Yiliang
Chairman and Managing Director
Toyo Communication Technology (Shenzhen) Co., Ltd.

▶ Konica Minolta's Approach | ▶ Excellent Green Factory Certification System

| ▶ Saving Energy and Preventing Global Warming in Production Operations

| ▶ Resource Conservation and Recycling in Production Operations

Green Procurement System

Implementing green procurement to assess the chemical constituents of parts and components and give preference to those with the least environmental impact

Green Procurement System

Konica Minolta operates a Green Procurement System in compliance with laws and regulations for chemical substances. In the operation of the SIGMA Green Procurement System, the Group ensures its compliance with the RoHS directive,^{*1} and also rapidly complies with more stringent regulations on chemical substances in products by expanding its coverage to include substances of very high concern (SVHCs) on the candidate list for authorization and other substances restricted under REACH regulations.^{*2} Through these efforts in assessment and management of chemical substances in products, the Group is keeping an eye on trends in regulations and alternative technologies and is working on plans to eliminate hazardous materials in order to be sure it avoids risks.

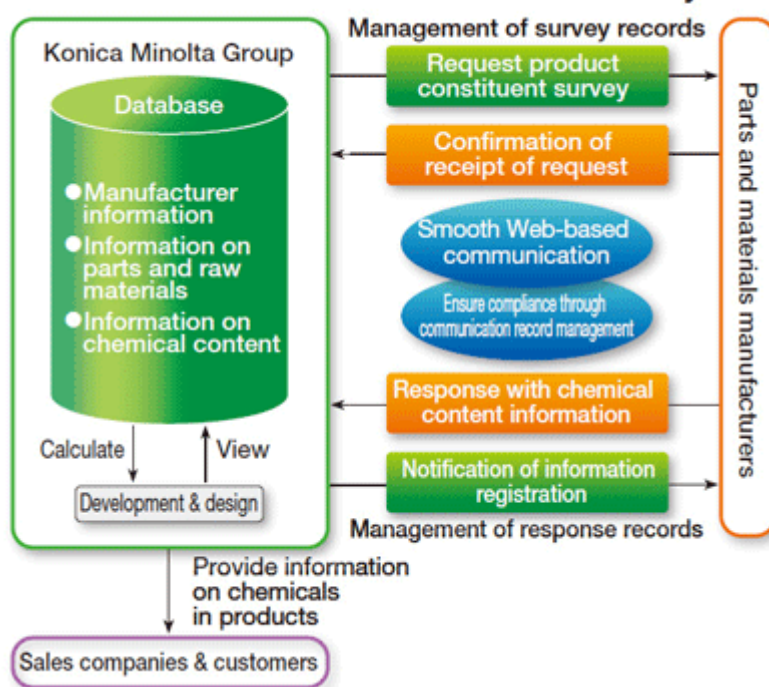

In addition, in order to ease the workload of suppliers, the Group uses the chemSHERPA^{*3} scheme to define the substances covered in its survey. Moreover, the Group regularly holds briefings on trends in environmental laws and regulations for its suppliers to ensure understanding of Konica Minolta's initiatives.

*1 RoHS directive: Directive on the restriction of the use of certain hazardous substances in electrical and electronic equipment

*2 REACH regulations: Regulations enacted by the EU in June 2007 concerning the registration, evaluation, authorization and restriction of chemicals, to consolidate existing regulations concerning chemical substances.

*3 chemSHERPA: A scheme developed by Japan's Ministry of Economy, Trade and Industry to facilitate the sharing of information on chemical substances contained in products in the supply chain. The Joint Article Management Promotion-consortium is responsible for its administration.

Overview of the SIGMA Green Procurement System

Main Features

- Japanese, English and Chinese language support
- Supports a standard chemical substance survey (chemSHERPA)
- Separates the procedures for checking for prohibited substances and for collection of information on reported substances in products
- Sharing of information from surveys and responses with business partners
- Storage of communication records in databases ensures compliance through tracking
- Simplifies the response to changes in regulations and substances subject to control

› [Green Procurement Guidelines \(Japanese, English, Chinese\)](#) 

Environmental Collaboration

The Business Technologies Business has implemented Environmental Collaboration to establish strong partnerships through on-site evaluations and educational support for suppliers in order to strengthen suppliers' environmental management. This is an initiative to help suppliers develop independent environmental management. Konica Minolta employees go directly to suppliers' factories and provide guidance based on assessment results for the management of chemical substances as well as to provide guidance in document management, including for measurement results and materials information.

Every year Konica Minolta provides education to suppliers' employees and certifies those who pass as internal evaluators for suppliers. In addition, each year the Group also conducts e-Learning for new evaluators as well as paper-based follow-up education for existing internal evaluators.

Konica Minolta's Approach

Background and Issues

With growing public demands to address environmental problems such as climate change and resource depletion, corporations are expected to carry out environmental activities that not only minimize risks but also promote business growth. To do this, companies need to reach beyond their own organizations and share value with customers, local communities, and other stakeholders. By promoting activities together, companies and their stakeholders can raise their level of contribution to global environment preservation throughout the value chain.

Vision

Konica Minolta has been contributing to the entire value chain by sharing its expertise and experience with customers to help resolve their environmental challenges. It seeks to strengthen relationships with customers and continually create shared value, building on the foundation of trust they have with Konica Minolta.

Key Measures

Strengthening relationships and helping customers solve their environmental challenges (fiscal 2020—fiscal 2022)

- Reduce customers' environmental impact
- Generate sales opportunities
- Leverage co-creation to solve environmental issues by reaching across corporate boundaries

Supporting Customers to Solve Their Environmental Issues

▶ Konica Minolta's Approach		▶ Supporting Customers to Solve Their Environmental Issues	
▶ Providing Services to Solve Customers' Environmental Issues			
▶ Reducing Environmental Impact in Sales Activities	▶ Reducing CO2 Emissions from Distribution		
▶ Reduction of Use of Packaging Materials	▶ Product Recycling		

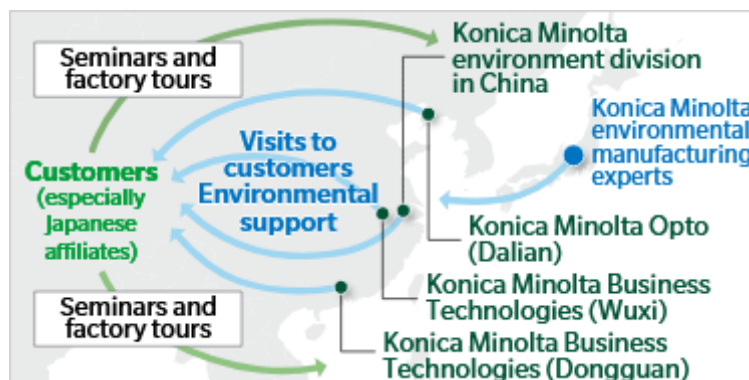

Overview of Activities

The solutions provided by Konica Minolta include not only products and services, but also environmental expertise that is useful to customers. Through Green Marketing activities that provide the proven environmental expertise the company already possesses, Konica Minolta seeks to build corporate relationships by working with customers who appreciate its approach to environmental management to help them solve environmental issues. The aim of these efforts is to become the business partner of choice for companies around the world.

Fiscal 2019 Activity Results

Konica Minolta provided environmental seminars and lectures in Japan to an audience of 1,560 people from 948 companies to introduce Konica Minolta's approach to environmental management, including practical examples. At EcoPro 2019, held in December in Tokyo, visitors were introduced to Konica Minolta's environmental management approach to solving environmental issues linked with a business plan, and the response was very favorable. The company's environmental consultation stand offered advice to visitors from 188 companies. Along with providing the environmental expertise practiced by Konica Minolta through the years, Konica Minolta representatives also visited some of the consultation recipients after the event to talk about environmental performance.

In China, where environmental laws and regulations have been substantially tightened, Konica Minolta held 22 environmental exchange meetings at customer sites and at its own factories. A total of 102 people from 62 customer companies gained expertise developed at Konica Minolta production sites in China and toured Konica Minolta facilities where the expertise is implemented. In some cases, expertise was mutually shared concerning a wide range of fields in addition to environmental performance, such as quality, production technology, and human resources development. There are also ongoing exchanges now being carried out between Konica Minolta sites and other factories.

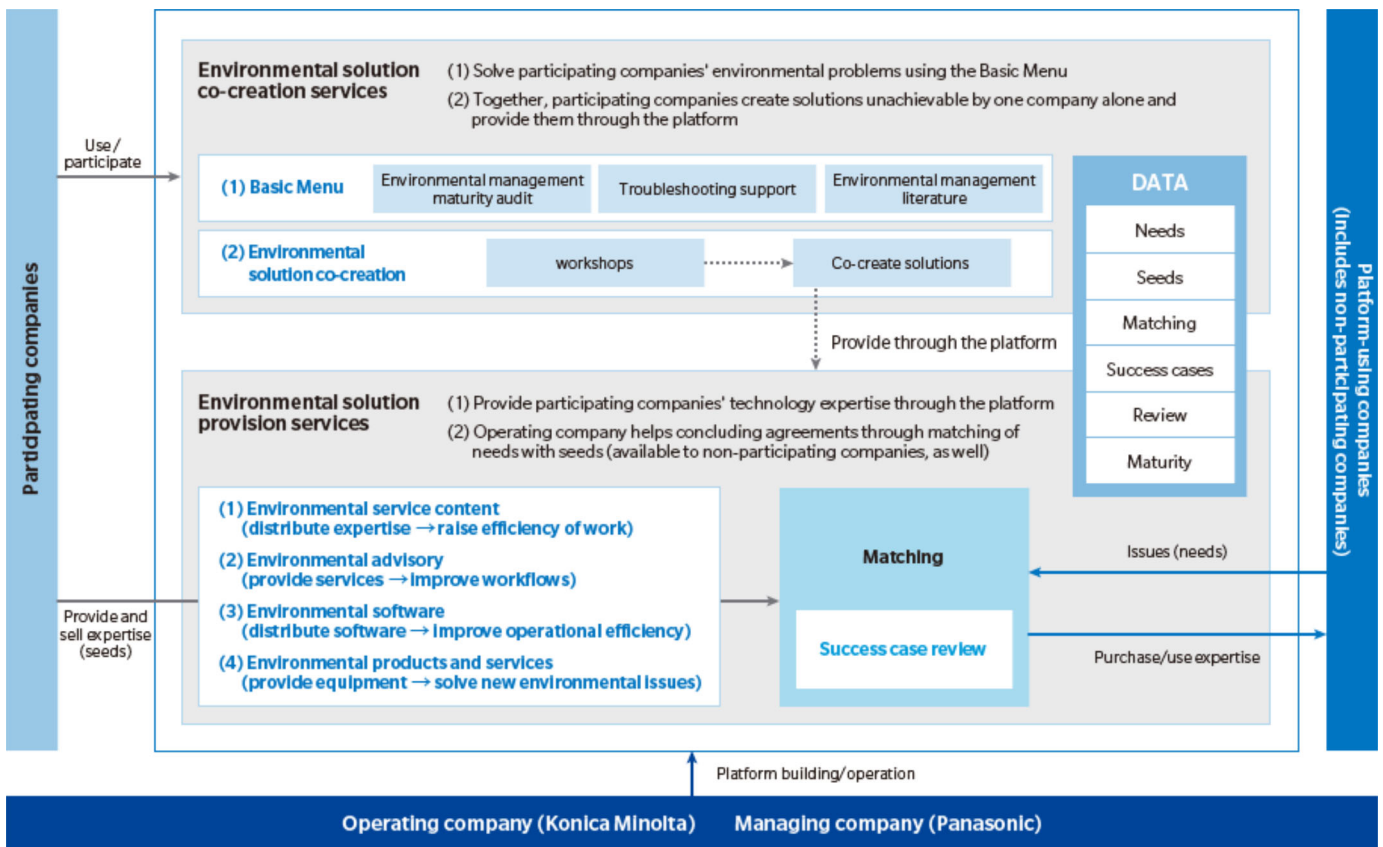

Building the Environmental Digital Platform

Global environmental problems are pressing challenges facing the whole world and cannot be solved by the isolated efforts of individual companies. Recognizing this, Konica Minolta has already opened up its reservoir of expertise in environmental management for business growth and cost reduction, has been sharing it with many other companies through digitization of our expertise.

Konica Minolta is in the process of digitally sharing its environmental expertise with a base of more than 1,000 companies that it has built through its environmental activities. By allowing these companies to share their environmental knowledge with each other and by providing a place to collaborate and create new value, Konica Minolta believes it can dramatically increase its contribution to environment. Konica Minolta launches the Environmental Digital Platform, aiming to help reduce the environmental impact of industry and society as a whole. The platform will enable companies to share and utilize their outstanding environmental technologies and expertise that Japanese companies have amassed. At EcoPro 2019 in December, Konica Minolta introduced the Environmental Digital Platform to customers via a panel exhibit and seminars, and over 80 companies showed their interest in their participation to the Platform.

Pilot run Trial operation of the Environmental Digital Platform began in June 2020 with 16 companies participating. The Group believes that the more our stakeholders use this platform, the more the Platform will grow, and it will become a place to find highly convenient solutions. The aim is not only to create opportunities to grow by helping to solve environmental and social issues, such as those addressed by the UN Sustainable Development Goals (SDGs), but also to accumulate advanced technologies and expertise, increase their utility value, and create business opportunities.

Example of Environmental Digital Platform Content
biz-Library : Environmental management Support Solution

Konica Minolta believes that digitizing and sharing the environmental management expertise it has accumulated with even more companies will dramatically increase its contribution to the environment. It has provided an online content service, biz-Library (environmental management), since fiscal 2016. This service provides videos and documents featuring practical case studies from Konica Minolta. The content targets seven challenges faced by many companies: (1) formulating environmental strategy, (2) responding to revised environmental ISO standards, (3) energy saving and cost reduction in factories, (4) management of chemical substances, (5) efficient use of resources and cost reductions in factories, (6) methods of calculating Scope3 CO₂ emissions, and (7) waste management by companies. Customers can use the manuals and tools actually implemented in Konica Minolta, allowing them to promote effective and efficient environmental impact reduction activities in their companies. These contents are shared on the Environmental Digital Platform mentioned above.

Efficient use of resources and cost reductions in factories

Waste management by companies

Voice of a Customer | Panasonic Corporation

The Panasonic Environmental Vision 2050 was established in 2017 with the goal of “energy used < energy created.” However, by working alone on specific environmental activities to achieve that goal, it seemed like the speed of Panasonic's efforts was limited. Over many years, I have heard about Konica Minolta's environmental management efforts via my interactions with its people in various situations, such as social events for our neighboring plants in China. Recently, I was invited to learn about Konica Minolta's Environmental Digital Platform. The concept was very appealing, so we joined the platform. I would like to work with Konica Minolta to share expertise across corporate boundaries and to collaborate and create new value by solving the challenges already faced by the participating companies. I am very excited about working with everyone to make this fantastic initiative succeed. Thank you for this opportunity.

Masaharu Kusumoto
 Director, Environmental Management Department, Quality & Environment Division, Panasonic Corporation

Support to Reduce Environmental Impact and Innovate Work Styles

Enhancing the ability to provide solutions through actual practice in Konica Minolta's own offices—comprehensive solutions for work space design

Konica Minolta offers office solution services that contribute to work style reforms, on top of reducing environmental impact, through optimization of office environments. When Konica Minolta Japan, Inc. moved its head office, it took a variety of measures in its new office in order to verify for itself the effects of its solutions and also to enhance its ability to propose solutions to customers by demonstrating actual practice. This practical experience was used to create comprehensive services with office space design solutions such as the "Design Your Time!" initiative.

For example, it implemented wide-ranging office solutions such as the optimal positioning of MFPs, the reduction of printouts and document storage space through document digitization, the reduction of business trips and transportation through the adoption of teleconferencing, and the increase of information management sophistication using the cloud environment.

These solutions led to reductions in environmental impact and costs, including a 24% reduction in copy paper printouts, a 44% reduction in electricity consumption, and a 44% reduction in CO2 emissions. They also freed up more than 200 square meters of space within the office. Additionally, work style improvements stimulated communication among employees, creating a highly productive office environment marked by on-target communication. Through the use of telework, CO2 emissions from commuting are reduced, along with total travel and transportation expenses. By providing flexible and convenient work environments, employee retention rates can be increased and excellent human resources can be secured. What is more, this new office is used as a live showroom that customers can experience.

Support for Environmental Impact Reduction That Addresses Customers' Environmental Issues and Concerns

Bizhub Eco

Konica Minolta has been developing Bizhub Eco service package revolving around MFPs to solve customers' environmental issues and concerns in Europe. Bizhub Eco uses Konica Minolta's Optimized Print Services (OPS) to set the installed MFPs to the most energy and resource-efficient setting for the usage situation of the customer. For a fee, the package also includes a carbon offset for the entire product lifecycle, biodiversity protection measures in the form of tree planting activities, and local NPO support. By also providing signage to explain the green activities promoted by Bizhub Eco, Konica Minolta facilitates internal communication in the 'customers' office.

(Available in France, Germany, United Kingdom, Austria, Belgium, the Netherlands, Sweden, and Switzerland)

Clean Planet Program

Konica Minolta collects used consumables from its customers via the Clean Planet recycling program in the United States and Europe.*

Using a portal site, customers can solve their printer cartridge recycling problem by ordering a collection box and returning it as soon as the box is full.

The recovered consumables are material-recycled using the latest technology in cooperation with a leading recycling company, Close the Loop, to maximize the collection of secondary raw materials. No incineration or landfills are used.

*In Europe the program has been launched in Belgium, the Netherlands and Norway, and there are plans to expand to other countries.

Recycling Support at Customer Sites Due to Improvement of Deinking Process

In the European market, a deinking process is required for recycling printed copy paper. Konica Minolta Business Solutions Europe GmbH has been certified for deinking by the International Association of the Deinking Industry (INGEDE). Deinking enables high-level paper recycling and helps promote the effective use of resources.

Contributing to the Reduction of Environmental Impact through Print on Demand (POD) Service

Contributing to cost reductions and energy savings by undertaking customers' printing work

The POD service offered by Kinko's Japan Co., Ltd. handles printing in a short time according to customers' requests. For example, by using this service during their busy seasons, customers no longer need to always have enough of their own printers ready to handle the print volume of peak times. This allows customers to keep down costs for installing and maintaining equipment, and it also translates into resource and energy savings for society as a whole.

Reducing CO₂ Emissions Associated with Sales Activities

Introducing Eco-friendly Vehicles to Its Sales Fleet and Promoting Eco-driving

Konica Minolta promotes the management and reduction of CO₂ emissions from the business vehicles operated by its sales companies around the world. The Group is promoting measures such as reducing the amount of travel through more efficient sales and service activities, introducing eco-friendly vehicles with low emissions of CO₂, and eco-driving to reduce energy consumption.

Eco-driving Initiatives at a Sales Company in Japan

Konica Minolta Japan, Inc. has installed a vehicle operation management system in company-owned vehicles. This system constantly gathers and stores data about the way company-owned cars are being used, including dangerous driving habits such as sudden acceleration and deceleration, as well as driving time, fuel consumption, and so on. Based on the data, drivers of company vehicles are given safe driving guidance. It is also used in eco-driving initiatives to lower fuel costs and reduce the environmental impact of company vehicle use.

Showroom in France Achieves Environmental Label

At a printing center, countless pages must be printed to meet the customers' needs for printed materials. At the same time, the environmental impact of this energy and resource consumption must also be minimized.

Sales company Konica Minolta Business Solutions France S.A.S., has earned the environmental label Imprim'Vert for its showroom, Digital Imaging Square. This certifies that organizations using the showroom for printing will be complying with the major standards for environmental management.

Obtaining Carbon Offsets for Trade Shows in Germany

Konica Minolta Business Solutions Europe GmbH aims to offset all of the CO₂ generated when participating in exhibitions and trade fairs for the purpose of sales promotion, and to achieve carbon neutral sales activities.

Adoption of Renewable Energy

Renewable Energy Initiatives

Konica Minolta is generating and using renewable energy at multiple sites. Meanwhile, Konica Minolta Business Solutions, U.S.A. built a photovoltaic installation in a parking lot in 2013 to generate electricity to power its offices.

Konica Minolta Business Solutions Europe, based in Germany, switched to 100% hydro-energy-derived power at all of its sites, including branches, through a contract with a power company in 2016. Since October 2019, Konica Minolta Business Solutions (UK) Ltd. has been obtaining over 80% of the electricity used at its sales sites from renewable energy sources. In January 2020, Konica Minolta Business Solutions Austria GmbH also accomplished this for its sales sites.

Operating on 100% hydro-energy-derived power (Germany)

Photovoltaic installation in the company parking lot (United States)

Carbon Offsetting Service

Carbon Offsetting for Office and Production Printing

Enabling carbon neutrality is a carbon-offsetting service that uses emissions credits to offset CO₂ emissions at every stage of the product lifecycle, from procurement to use. Konica Minolta Business Solutions Europe introduced the service for office and production printers in July 2015 and offers it across the whole of Europe.

So far it has been introduced in 11 countries, including Germany, France, and the Netherlands, to offset CO₂ emissions throughout the product lifecycle. In addition to these activities, the company uses carbon offsetting for CO₂ emissions from commuting and business trips as well as events such as international exhibitions. It has offset a total of over 34,000 tons of CO₂ emissions thus far as a result. Konica Minolta will increase the number of countries eligible in order to contribute more to the creation of a sustainable planet and society.

Environmental Contribution Activities and Initiatives to Raise Employees' Environmental Awareness

"Sustainability Week" to Raise Employees' Environmental Awareness

Konica Minolta Business Solutions France holds a Sustainability Week that encourages eco-friendly initiatives and participation in charitable organizations, in an effort to raise employees' awareness of sustainability. Enabling contact with various initiatives, such as education about environmental policies, the sale of honey harvested by the company, the use of eco-friendly vehicles (electric cars), and appropriate waste disposal, this event is an opportunity for each and every employee to gain even greater awareness about the creation of a sustainable society.

Internal poster for Sustainability Week

Beekeeping with the Aim of Raising Awareness of Biodiversity

Konica Minolta Business Solutions France has greened the roof of its building in Paris and set up beehives for beekeeping. People in France traditionally exhibit an understanding of beekeeping even in a densely populated city such as Paris. The honeybees raised in these beehives help pollinate many kinds of plants such as fruit trees, vegetables, and flowers, enriching the biodiversity of the surrounding area.

Moreover, the harvested honey is bottled and sold to employees, with the proceeds donated to a charity fund established by Konica Minolta Business Solutions France. The fund promotes cultural, artistic, and sporting activities for people with disabilities throughout the year. Through this initiative, the company is raising employees' awareness of the preservation of biodiversity while also contributing to the community.

Beekeeping on the roof

Supporting the Green Marathon, the Objective of Which Is Reforestation

The Green Marathon has been held in Rennes, France since 2011 with the objective of reforestation in Ethiopia. In an endorsement of this goal, Konica Minolta Business Solutions France has continued to support the marathon since its inception. The marathon intends to contribute to society in various ways, including the spirit of sport and the protection of the natural environment. It conducts an initiative to plant one tree per kilometer run by each participant, in order to support the restoration of forests. In 2019, the marathon resulted in the planting of nearly 120,000 trees. Since 2012, the cumulative distance run by participants has exceeded 840,000 kilometers, and a tree has been planted for every one of those kilometers.

Green Marathon

Raising Environmental Awareness Through Volunteering

Every year, Konica Minolta Business Solutions U.S.A. raises the sustainability awareness of its employees by offering them the opportunity to participate in volunteer activities with non-profit organizations. For the past five years, it has supported the non-profit Mahwah Environmental Volunteers Organization (MEVO) through volunteering and donations. As part of MEVO's "Seeds of Change" program, it supports a paid summer internship for a high school student to work on a farm and learn about sustainability and community leadership. The company also provide teams of employee volunteers two or three times a year. The volunteers help plant and harvest crops while learning about the local environment, as well as sustainable gardening and agriculture.

Konica Minolta Business Solutions U.S.A. employees also participate as volunteers with the New York-New Jersey Trail Conference, where they help to keep local parks, hiking trails and forests sustainable and accessible to the community. In 2020, in cooperation with the Arbor Day Foundation, employees are contributing to global reforestation activities by planting 10,000 trees in areas where forest fires have recently occurred.

Reducing CO₂ Emissions from Distribution

▶ Konica Minolta's Approach	▶ Supporting Customers to Solve Their Environmental Issues
▶ Providing Services to Solve Customers' Environmental Issues	
▶ Reducing Environmental Impact in Sales Activities	▶ Reducing CO ₂ Emissions from Distribution
▶ Reduction of Use of Packaging Materials	▶ Product Recycling

In order to reduce CO₂ emissions associated with distribution, transportation must be streamlined and means of transportation with little environmental impact must be chosen. Konica Minolta is reducing CO₂ emissions derived from distribution operations by measures such as shortening transportation distances through optimization of logistics facilities and routes worldwide, reducing the number of containers through improved loading efficiency.

Major Initiatives

Optimizing Shipping Container Loading Efficiency

Konica Minolta is reducing CO₂ emissions and increasing the efficiency of shipping container loading during transportation by employing consolidated services based on loads. In the Business Technologies Business, for example, when Konica Minolta delivers office equipment to various European countries from its distribution center in Germany, achieving optimal loading efficiency according to the size, shape and changes in the logistic quantity of products is one of the key challenges. The company has been improving loading efficiency through the introduction of a loading simulation program. Furthermore, since fiscal 2016, Konica Minolta has improved loading efficiency by optimizing the packaging form to suit the shipping conditions, focusing on marine transportation of parts procured in Japan to plants in China and ASEAN for assembly, shipment of products from Chinese warehouses to distributors worldwide, and land transportation of products manufactured in Mexico into the U.S.

Promoting a Modal Shift

Konica Minolta has been promoting a modal shift for the transportation of products and parts, switching from aircraft and trucks to ships, railways, and other means that emit less CO₂.

In Europe, for instance, it uses barges that run along the Rhine River as the means of transportation from the Port of Rotterdam in the Netherlands to its base warehouse in Emmerich, Germany. In the U.S., it has reduced CO₂ emissions by using railroads when transporting cargo from the Port of Los Angeles on the West Coast to the interior and the East Coast.

Reconsidering Distribution Routes and Consolidating Logistics Facilities

Konica Minolta is reducing CO₂ emissions from its distribution processes by restructuring its logistics facilities both in Japan and outside of Japan. In fiscal 2019, the company continued its efforts from the previous fiscal year to streamline logistics by optimizing distribution routes for products and service parts shipped from office equipment production and distribution sites in China and ASEAN to customers worldwide.

In production procurement, at its Malaysian factory, Konica Minolta took the external warehouses and parts supplier production sites dotted around distant locations and consolidated them in the vicinity of the factory, establishing a Smart Industrial Center (SIC). This reduced the transportation distance considerably, enabling achievement of just-in-time (JIT) supply to the factory. Transportation distances were also reduced considerably by changing parts shipped to Malaysia from Chinese parts suppliers to Malaysian production.

Moreover, with the proactive utilization of a lead logistics provider (LLP) for distribution in Japan, Konica Minolta reorganized distribution sites, revised routes, and utilized joint transportation with other companies, thereby strategically reducing CO₂ emissions from distribution activities. Improving the efficiency of distribution routes and sites has also led to reductions in the space and energy used at distribution warehouses.

These initiatives resulted in a reduction of around 310 tons in CO₂ emissions in fiscal 2019.

Milk Run Logistics (Common Collection of Cargos)

The term "milk run" originally came from the milk collecting system of dairy producers who visited dairy farms to collect milk in a single vehicle. In the manufacturing industry, it refers to a collection method in which a single vehicle is used to make rounds picking up goods from various suppliers instead of requesting each supplier to deliver goods individually.

Konica Minolta is using milk run logistics in the suburbs of Wuxi City in Jiangsu, China. This helps to reduce CO₂ emissions by shortening the total driving mileage of the trucks.

In addition, the Group is also reducing waste by using re-usable boxes instead of cartons to transport the parts.

Joint Transport

Konica Minolta Japan, Inc., a sales company, carries out joint distribution of office equipment with Epson Sales Japan Corporation, including installation work, in the Kanto and Koshinetsu areas in Japan. These initiatives result in high-quality delivery and installation operations that raise the satisfaction of customers and help reduce CO₂ emissions.

Reducing CO₂ Emissions Associated with Shipping by U.S. Sales Company

Konica Minolta Business Solutions U.S.A., Inc. is a member of the SmartWay program at the United States Environmental Protection Agency (EPA). This initiative helps companies improve their supply chain sustainability by measuring, benchmarking and improving the efficiency of freight transport.

As a member of this program, the company is working on:

- Reducing emissions and fuel consumption in logistics activities
- Shipping more than 50% of goods through EPA designated SmartWay carriers
- Using railway cars and Smartway truck trailers, avoiding vehicle idling, and reducing transport distances
- Shipping multiple orders together

▶ Konica Minolta's Approach | ▶ Supporting Customers to Solve Their Environmental Issues

▶ Providing Services to Solve Customers' Environmental Issues | ▶ Reducing Environmental Impact in Sales Activities

▶ **Reducing CO₂ Emissions from Distribution** | ▶ Reduction of Use of Packaging Materials | ▶ Product Recycling

Reduction of Use of Packaging Materials

Konica Minolta is reducing packaging material usage by optimizing shapes and recycling.

Major Initiatives

Reduction of Use of Packaging Materials

Konica Minolta has developed new buffer materials, in addition to techniques to optimize conventional buffer materials, for its multi-function peripherals (MFPs) for offices and production printing machines, thereby substantially reducing the use of packaging materials. In order to confirm the actual transportation environment, the development, production and sales departments worked together to conduct an experiment in 2016. Products were sent from production sites in China on various routes by ship, truck and railway to sales companies worldwide. After arrival, they were checked to see what impact they underwent during shipment. Using these measurements as a reference, the company reexamined its packaging design concept and succeeded in streamlining the cushioning material while maintaining the equivalent shock resistance. This greatly reduced the amount of styrene foam used.

In 2019, Konica Minolta developed a new air cushioning material* that converts the various impact energies produced during transport into heat energy and succeeded in increasing the cushioning efficiency. Compared to conventional packaging from 2005, new packaging that includes this cushioning material uses 83% less styrene foam by weight ratio.

In addition to developing its own technologies, the company has also worked to reduce the use of styrene foam with packaging designs that replace styrene foam with cardboard using TOTO LTD. cardboard cushioning technology (PAT P6362025).

This improvement resulted in smaller packing boxes and a substantial reduction in the use of styrene foam, contributing to greater transportation efficiency, which in turn helped to substantially reduce CO₂ emissions during distribution.

The various initiatives undertaken in 2019 reduce the environmental impact of the company's packaging throughout the entire supply chain from procurement, assembly, distribution, recovery and recycling by the equivalent of approximately 1,200 tons in CO₂ emissions per year.

In order to expand the effects, in addition to increasing the types of office MFPs and production printing machines covered by these initiatives, the company also expanded it to peripheral equipment and consumables.

*The new air cushioning material won the President's Award of the Japan Productivity Center, one of the top-ranked Japan Star awards at the Japan Packaging Contest 2019 sponsored by the Japan Packaging institute.

Example of downsized packaging for office MFPs and the application of new air cushioning material

Example of downsized packaging for consumables

Recycling Used Packaging Materials

Konica Minolta’s sales companies worldwide are also working hard to recycle used packaging materials. Konica Minolta Business Solutions (UK) Ltd., a sales company in the UK, established the “Greenhub” recycling center inside its logistics warehouse. It separates used packaging materials for MFPs and production printing machines into cardboard, styrene foam, film, and wood, and then sells them to a local recycling operator as material for recycling. In the Greenhub, it pulverizes and compresses styrene foam, which has poor transportation efficiency due to its large volume relative to weight, in an effort to reduce environmental impact associated with its transportation. The Group is carrying out similar initiatives at sales companies in France, Belgium, Germany, Japan and China.

Product Recycling

▶ Konica Minolta's Approach	▶ Supporting Customers to Solve Their Environmental Issues
▶ Providing Services to Solve Customers' Environmental Issues	
▶ Reducing Environmental Impact in Sales Activities	▶ Reducing CO2 Emissions from Distribution
▶ Reduction of Use of Packaging Materials	▶ Product Recycling

Konica Minolta has developed recovery and recycling programs for used products in regions around the world, each one tailored to local legal systems and market conditions.

Recovery and Recycling of Used Products

Konica Minolta has a program for collecting used MFPs, printers and other products from customers through the Konica Minolta Group's sales companies around the world. These products are recycled by contractors that meet the legal requirements, and obtain approval in each country.

Konica Minolta's recovery and recycling program complies with the waste disposal laws in each country. When forming agreements with contractors, Konica Minolta asks them to comply with the necessary laws and regulations in each location. Moreover, Konica Minolta conducts audits using reports on recycling conditions and appropriate disposal obtained via regular on-site monitoring. In Japan, Konica Minolta carries out on-site inspections once every three years to confirm recycling conditions, including compliance with environmental laws and regulations.

For example, in Japan, after collecting used MFPs and printers from eight collection centers, the used products are recycled at seven designated contractors. The collected products are taken apart by hand, rather than crushed mechanically, to raise the recycling rate. After dismantling, metal and plastic parts are separated, for example, and many are reused as materials. Those that cannot be reused as materials are reused as fuel.

In fiscal 2019, Konica Minolta sold a total of 97,800 tons of office equipment worldwide. Meanwhile, 14,200 tons of end-of-life office equipment were recovered by major sales companies in Japan, China, the United States, and Europe. Of this amount, 14,100 tons of material were recycled.

Recycling process at a designated contractor

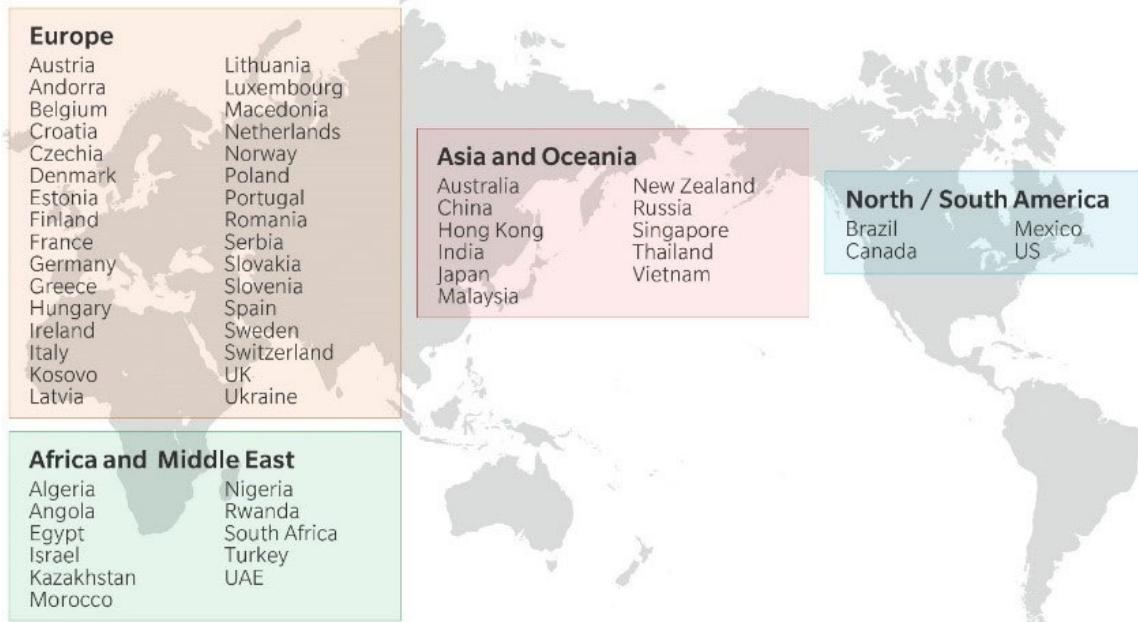

In addition, Konica Minolta has received approval from Japan's Ministry of the Environment to dispose of copiers, MFPs and printers that it has sold based on a special system for wide-area treatment of industrial waste. Konica Minolta operates a fee-based recovery program for collecting and recycling used printers and copiers from corporate clients.

Outside Japan, Konica Minolta is undertaking recycling programs tailored to conditions in specific countries. In Europe, for example, the company has adopted measures in compliance with the EU directive on the disposal of waste electrical and electronic equipment (WEEE). It meets the legal and environmental labeling requirements in various countries including Asian countries such as China and India.

Recovery and Recycling Printer Cartridges

Konica Minolta offers systems for the free-of-charge recovery and recycling of used toner cartridges for laser printers over 20 countries including in Europe, the U.S., and Japan. In the U.S., this free-of-charge recovery system has been expanded to include used toner bottles for MFPs. In Australia, Konica Minolta also offers its own recovery and recycling programs.

Participation in Industry Organizations and Networks

Initiatives in Japan

Konica Minolta participates in the recovered equipment exchange system run by the Japan Business Machine and Information System Industries Association (JBMA). Through this initiative, equipment turned in by manufacturers of copiers, MFPs and digital printers, including Konica Minolta, are collected at shared collection centers and returned to manufacturers, thus promoting the recovery and recycling of products in the industry overall. There are 35 collection sites and nine exchange centers for collected machines from Hokkaido to Okinawa, covering all of Japan.

Initiatives in Europe

In France, Konica Minolta Business Solutions France S.A.S. established CONIBI with joint investments from 17 office equipment manufacturers and contracted recovery operations to this joint company. CONIBI created its own free collection system and promotes the recycling of toner cartridges and consumables.

Environment Activities

Environmental Data

Konica Minolta measures the amount of energy and resources used in all its business activities, as well as the amount of greenhouse gases emitted and the amount of waste produced at each stage of a product's life cycle. These results are analyzed and used to facilitate concrete approaches to improvement.

Surveys and Measures Taken on Soil and Groundwater Contamination

Efforts regarding soil and groundwater contamination

Konica Minolta is striving to manage the state of contamination through regular monitoring, to facilitate cleanup, and to prevent the spread of contamination.

It conducts robust management through periodic observation at sites where soil or groundwater contamination has been identified to ensure that the contaminants do not affect the surrounding environment.

The Group has organized a special team to manage remediation of polluted sites and to prevent the spread of contamination. Detailed surveys conducted under the team's supervision serve as the basis for developing countermeasures and examining suitable purification technologies.

The Group reports the results of its observations and remediation efforts to local government agencies.

Summary of Contaminated Soil or Groundwater at Operation Sites

Operation Site	Substances	Progress in Fiscal 2019
Tokyo Site Hino (Hino, Tokyo)	Fluorine, Boron, Mercury, Benzene, Lead	The company has continued to periodically monitor groundwater at the site boundary and has confirmed that amounts of these substances do not exceed standards.
Tokyo Site Hachioji (Hachioji, Tokyo)	Hexavalent chromium	The company has continued to purify groundwater and prevent dispersion by pumping water at the site. It has periodically monitored the groundwater and confirmed that there is no runoff of these substances from the site.
Kofu Site (Chuo, Yamanashi Prefecture)	Fluorine	The company has continued to periodically monitor groundwater at the site boundary and has confirmed that amounts of fluorine do not exceed standards.
Mikawa Site, Western Zone (Toyokawa, Aichi Prefecture)	TCE* ¹ , Fluorine	With the construction of a new plant, the company purified soil that exceeded standards for lead. It also carried out purification work for fluorine in fiscal 2018, and is periodically monitoring groundwater for a period of two years to confirm the effects. It has continued to periodically monitor groundwater for TCE, and has confirmed that amounts of this substance do not exceed standards.
Itami Site (Itami, Hyogo Prefecture)	Lead, Arsenic, Cadmium, Fluorine, Boron	The company has confirmed that amounts of lead and cadmium do not exceed standards at periodically monitored wells. It continues to purify and prevent dispersion of other substances by pumping up water at the site.
Sakai Site (Sakai, Osaka)	TCE, PCE* ² , c-DCE* ³ , Boron, Lead, Arsenic, Cadmium	The company has found that amounts of lead, arsenic, and cadmium do not exceed standards at periodically monitored wells. It continues to purify and prevent dispersion of other substances by pumping up water at the site.

Operation Site	Substances	Progress in Fiscal 2019
Osaka Sayama Site (Osaka Sayama, Osaka)	TCE, PCE, c-DCE	A survey of the demolition plan for old buildings found soil and groundwater exceeding the standards. The company will continue to take additional measures besides pumping up water at the site to purify and prevent dispersion.
Konica Minolta Mechatronics Co., Ltd. Ueta Plant (Toyohashi, Aichi Prefecture)	TCE, c-DCE, Hexavalent Chromium	The company has continued to purify and prevent dispersion of groundwater by pumping water at the site.
Konica Minolta Mechatronics Co., Ltd. Fuefuki Plant (Fuefuki, Yamanashi Prefecture)	TCE, PCE, c-DCE	The company has continued to purify and prevent dispersion of ground water through pumping, permeable reactive barriers, and bio-barriers.
Konica Minolta Supplies Manufacturing Co., Ltd. Head Office (Kofu, Yamanashi Prefecture)	TCE, PCE, c-DCE	The company has continued to monitor regularly groundwater at observation wells located on site.

*1 TCE: trichloroethylene

*2 PCE: tetrachloroethylene (perchloroethylene)

*3 c-DCE: cis-1,2-dichloroethylene (resolvent of TCE and PCE)

Standards for Calculating Environmental Data

Standards for Calculating Environmental Data (CO₂ Emissions)

Boundary and Standards for Calculation

Stage		Methods of Calculation
1.Procurement	1) Boundary	Office equipment and consumable supplies, optical components, equipment for healthcare system manufactured and sold by Konica Minolta, Inc.
	2) Standards	Calculated by multiplying the sales amount or production amount of office equipment and consumables by a cradle-to-gate CO ₂ emission factor for each of the materials that make up a product; and for other products, multiplying the amount of material used by a cradle-to-gate CO ₂ emission factor for that material.
2.Production / R&D	1) Boundary	All production and R&D sites around the world
	2) Standards	CO ₂ emissions are calculated by multiplying the amount of energy used at each site by the following Fuel:Coefficients stipulated in Japan's Act on Promotion of Global Warming Countermeasures Electricity in Japan: Fiscal 2005 average value of all electrical power sources, as specified by the Federation of Electric Power Companies of Japan Electricity outside Japan: Fiscal 2005 emissions coefficients applicable to each country, as specified by the GHG Protocol
3.Distribution	1) Boundary	Japanese domestic distribution, Chinese and Malaysian production distribution (from factory to port), and international distribution of office equipment, optical components, performance materials, and equipment for healthcare systems
	2) Standards	CO ₂ emissions are calculated by multiplying transport distance by cargo weight, and then multiplying that value by the CO ₂ emissions coefficient of each means of transportation.* ¹ Chinese and Malaysian production distribution and international distribution: Coefficients specified by the GHG Protocol Japanese domestic distribution: Coefficients stipulated in Japan's CO ₂ Emissions Calculation Method for Logistics Operations—Joint Guidelines Ver.3.0
4.Sales and service	1) Boundary	All consolidated sales companies around the world
	2) Standards	Offices: CO ₂ emissions are calculated by multiplying the amount of energy used at sites* ² by the following coefficients. Fuel: Coefficients stipulated in Japan's Act on Promotion of Global Warming Countermeasures Electricity in Japan: 2005 average value of all electrical power sources, as specified by the Federation of Electric Power Companies of Japan Electricity outside Japan: 2005 emissions coefficients applicable to each country, as specified by the GHG Protocol Vehicles: CO ₂ emissions are calculated by multiplying the amount of vehicle fuel used* ³ by the following Fuel: Coefficients stipulated in Japan's Act on Promotion of Global Warming Countermeasures

Stage		Methods of Calculation
5.Usage	1) Boundary	Office equipment and equipment for healthcare system * Optical components are excluded since they are used as parts of other companies' products
	2) Standards	CO ₂ emissions are calculated by multiplying the number of units operating in the market (inferred from sales units each year and the life of the product) by the estimated annual amount of electrical consumption* ⁴ for each model and the CO ₂ coefficient equal to the fiscal 2005 world average value specified by the GHG Protocol.

*1 Estimated for optical components based on sales.

*2 The amount of energy used includes some estimated values.

*3 The amount of fuel used includes some estimated values.

*4 The annual amount of electricity consumption for office equipment is estimated based on the Typical Electricity Consumption (TEC) value set by the International Energy Star Program, and for equipment or healthcare systems it is estimated based on each product's specifications.

Note: Figures in graphs may not add up to totals due to rounding.

Standards for Calculating Environmental Data (Emissions Other Than CO₂)

Boundary and Standards for Calculation

Item		Methods of Calculation
1. Petroleum-based resource usage in products	1) Boundary	Office equipment and consumable supplies, performance materials, optical components, and equipment for healthcare systems produced and sold by Konica Minolta, Inc.
	2) Standards	Calculated by multiplying the raw material or part weight by content percentage of petroleum-based resources set for each material, based on the product specification
2. Packaging materials usage	1) Boundary	Raw material and parts used in packaging for office equipment and consumable supplies, performance materials, optical components, and equipment for healthcare systems
	2) Standards	Calculated by multiplying the weight of packaging material per single product (based on product specifications, etc.) by the number of units of the product sold, based on sales results
3. Waste discharged Externally from manufacturing	1) Boundary	All production and R&D sites around the world
	2) Standards	The total actual weight of waste discharged externally from production* ¹
4. Final disposal	1) Boundary	All production and R&D sites around the world
	2) Standards	The total weight of final disposal* ² (Weight of waste discharged externally from production × Percentage of final disposal* ³)
5. Atmospheric emissions of VOCs	1) Boundary	Production sites around the world with ten or more environmental impact index* ⁴ points, when points are added for every compound that is rated of one point or more.
	2) Standards	The sum of the environmental impact index for atmospheric emissions of VOCs* ⁵
6. Water consumption	1) Boundary	All production and R&D sites around the world
	2) Standards	The total amount of water intake (city water, ground water, industrial water)

Notes

- *1 Of the waste (refuse, etc.) generated at production and research and development sites for which Konica Minolta has responsibility as generator of waste, the amount discharged outside the Konica Minolta site. However, some wastes unrelated to production are excluded.
- *2 Except for residues after recycling.
- *3 Percentage of final disposal are calculated based on the value from industrial waste disposal companies.
- *4 Environmental impact index: An index unique to Konica Minolta.
Environmental impact index (point) = Atmospheric emissions of VOCs [t] × Hazard coefficient × Location coefficient
Hazard coefficient: Set at 1-fold, 10-fold, or 100-fold depending on the severity of the impact on human health and the environment (set independently by Konica Minolta based on the coefficient used in the safety evaluations conducted by Kanagawa Prefecture in Japan)
Location coefficient: Outside the industrial estate 5, inside the industrial estate 1
- *5 The overall picture of environmental impact does not take into account the hazard coefficient and location coefficient, and the atmospheric emissions are shown as is.

Note: Figures in graphs may not add up to totals due to rounding.

CO₂ Emissions Across the Entire Supply Chain

Calculating CO₂ Emissions Across the Entire Supply Chain

Konica Minolta has calculated the CO₂ emissions associated with the Group’s activities across its entire supply chain, from the upstream to the downstream aspects of its operations, based generally on the standards of the GHG Protocol*, the international standard. In fiscal 2019, the calculation showed that CO₂ emissions throughout the supply chain were approximately 1.32 million tons, which represents a decrease of approximately 5.1% from fiscal 2018. Emissions from the Group’s activities including direct emissions from fuel use (Scope 1) plus indirect emissions from the consumption of purchased electricity, heat or steam (Scope 2) totaled approximately 0.35 million tons, or approximately 26% of all emissions. Other indirect emissions (Scope 3) associated with the Group’s activities totaled approximately 0.98 million tons, accounting for approximately 74% of all emissions. CO₂ emissions for “purchased goods and services” accounted for 31.5% of emissions across the entire supply chain. Since the amount of resources needed per product declined thanks to the development of the latest models with resource-saving designs, the overall CO₂ emissions resulted in a reduction. In terms of the “use of sold products,” which accounted for 15.0% of emissions, the Group is working to develop features that encourage customers to save energy, in addition to reducing the power consumption of the products themselves. Konica Minolta will share information with relevant stakeholders in the future based on the results of these calculations and move forward with CO₂ emissions management and reduction activities throughout the supply chain.

* GHG Protocol: Initiatives for developing an international standard for addressing greenhouse gas (GHG) emissions and climate change

Overall View of CO₂ Emissions Across the Entire Supply Chain of Konica Minolta

*¹ Categories 3 (Fuel- and Energy-Related Activities), 5 (Waste Generated in Operations), 6 (Business Travel), 7 (Employee Commuting), 8 (Upstream Leased Assets), 9 (Downstream Transportation and Distribution), 13 (Downstream Leased Assets), 14 (Franchises) and 15 (Investments)

*² CO₂ emissions attributed to product distribution: 34 thousand tons ★

Note: Figures may not add up precisely to the total due to rounding.

Method of Calculation in Each Category of Scope 3 Emissions

Category	Overview	Method of Calculation
1	Purchased goods and services	Calculated by multiplying the sales amount or production amount of office equipment and consumables by a cradle-to-gate CO ₂ emission factor for each of the materials that make up a product; and for other products, multiplying the amount of material used by a cradle-to-gate CO ₂ emission factor for that material.
2	Capital goods	Calculated by multiplying the amount of investment in capital goods purchased over the year by a CO ₂ emission factor per investment value.
3	Fuel- and energy-related activities	Calculated for emissions from the extraction, production, and transportation of fuels purchased by the Group or by electricity producers for the electricity purchased by the Group. (Fuel) Calculated by multiplying the annual purchased volume by a cradle-to-gate CO ₂ emission factor for each type of fuel. (Fuels purchased and used by electricity producers) Calculated by multiplying the annual purchased volume of electricity by source, by a CO ₂ emission factor for each source. Proportion of sources in electricity generation for each country is identified from the Proportions of Generated Power by Source in Major Countries, published by the Federation of Electric Power Companies of Japan.
4	Upstream transportation and distribution	Emissions in this category are the sum of: A) emissions related to transportation of parts and raw materials the Group purchases, and B) emissions related to transportation of the Group's products. A) Calculated for emissions related to procurement distribution from suppliers to Konica Minolta's plants. Calculated by multiplying transport distance by cargo weight, and then multiplying that value by the CO ₂ emission factor for each means of transportation. B) Calculated for emissions related to shipping and distribution internationally, within Japan, within China. Calculated by multiplying transport distance by cargo weight, and then multiplying that value by the CO ₂ emission factor for each means of transportation.
5	Waste generated in operations	Calculated for waste (not including valuables) from production, R&D, and sales offices. Calculated by classifying waste into different types and multiplying the amount of each type of waste entrusted to a party outside the company by a CO ₂ emission factor for each method of waste disposal.
6	Business travel	For business travel by employees of Group companies in Japan, the emissions are calculated by multiplying the annual business travel expenditure by a CO ₂ emission factor per expense for travel for each means of transportation. The CO ₂ emission factor used is that for travel by domestic air flight in Japan, which is the highest among the emission factors for all methods of travel. For Group companies outside Japan, it is estimated by multiplying the number of employees of each company by the emission amount per employee calculated based on the result in Japan.
7	Employee commuting	Calculated by multiplying the annual commutation cost by a CO ₂ emission factor per expense. The CO ₂ emission factor used is for "automobiles (buses and ride-sharing in sales vehicles)," which is the highest among the emission factors for all commuting methods. For Group companies outside Japan, it is estimated by multiplying the number of employees of each company by the emission amount per employee calculated based on the result in Japan.
8	Upstream leased assets	Most leased assets are calculated as Scope 1 and 2 emissions. Scope 3 applies only to some leased assets (e.g., data centers). Calculated by multiplying the actual annual power consumption for the leased servers by a CO ₂ emission factor for electrical power.
9	Downstream transportation and distribution	Calculated for emissions related to distribution of Konica Minolta products sold by dealers. Estimated by identifying a CO ₂ emission factor per unit of sales based on the emissions from distribution for direct sales by the main sales companies and multiplying this by dealer sales volume.

Category	Overview	Method of Calculation
10	Processing of sold products	Konica Minolta's product lineup includes semi-finished product. Emissions in this category are calculated by identifying a CO ₂ emission factor per unit of sales based on the Scope 1 and Scope 2 emissions and sales volume of the main parts sales destinations and multiplying this by overall sales volume.
11	Use of sold products	Calculated by multiplying the number of units operating in the market (inferred from sales units each year and the life of the product) by the estimated annual amount of electrical consumption* for each model and the CO ₂ coefficient equal to the fiscal 2005 world average value specified by the GHG Protocol. The calculation method used by Konica Minolta is slightly different from the GHG Protocol method, but it enables the Group to calculate the emissions that more accurately reflect the Group's business operations and thus allows it to implement initiatives to reduce CO ₂ emissions smoothly.
12	End-of-life treatment of sold products	Calculated for emissions related to the end-of-life treatment of products themselves and their containers and packaging. Calculated by multiplying the weight of materials that make up the products sold by a CO ₂ emission factor for each type of disposal method. The calculation is made for anticipated future emissions from the end-of-life treatment of products sold in the previous fiscal year, which will be reported as the data of that fiscal year.
13	Downstream leased assets	All of Konica Minolta's product leasing is done through leasing companies. Konica Minolta does not enter into lease agreements directly with customers. Also, Konica Minolta did not lease out any large buildings or equipment. It was therefore judged that there were no emissions in this category.
14	Franchises	Emissions from Kinko's franchises in Kyushu, Hiroshima, and Shikoku fall under this category. Estimated based on the proportion of employees, based on energy usage at the head office of Kinko's Japan Co., Ltd.
15	Investments	Calculated for the emissions from the main companies in Konica Minolta's investment portfolio, in which Konica Minolta holds specified investment stocks. Calculated by multiplying the invested companies' CO ₂ emissions by Konica Minolta's shareholding ratio (%) in those companies (number of shares held by Konica Minolta / number of shares issued).

* The annual amount of electrical consumption for office equipment is estimated based on the Typical Electricity Consumption (TEC) value set by the International Energy Star Program, and for equipment for healthcare system it is estimated based on each product's specifications.

Environmental Data

Environmental Accounting in Fiscal 2019

Konica Minolta has implemented global-scale, consolidated environmental accounting in order to quantitatively assess the costs of environmental preservation in business operations and the benefits obtained from those activities.

Expenditures in fiscal 2019 were approximately 13.1 billion yen, a slight decrease from fiscal 2018. Investments remained largely unchanged from the previous fiscal year at 1.1 billion yen. Investments in fiscal 2019 consisted of regular equipment renewal only, and there was no large-scale investment. Economic benefits were almost the same as the previous year at about 24.4 billion yen.

Note: Percentages do not necessarily total to 100 because of rounding.

(Million yen)

Results for Fiscal 2019

Types of Environmental Conservation Activities	Major Initiatives	Fiscal 2019 Results		
		Investment	Expenditures	Economic Benefits
1. Business area cost		762	3,352	21,395
1) Pollution prevention cost	Implemented wastewater treatment facilities maintenance, reduced atmospheric emission of VOCs, and carried out chemicals management	122	1,341	0
2) Preventing global warming cost	Promoted energy conservation	488	737	3,410
3) Resource circulation cost	Recovered solvents	152	1,274	17,985
2. Upstream / downstream costs	Collected and recycled products	0	1,916	3,010
3. Administration cost	Implemented environmental management systems	0	1,134	0
4. R&D cost	Developed energy-saving products and products containing no hazardous substances	307	6,679	0
5. Social activity cost	Implemented environmental conservation activities	0	2	0
6. Environmental remediation cost	Restored contaminated soil	10	49	0
7. Other costs		0	0	0
Total		1,079	13,132	24,405

Fiscal 2019 Results: Environmental Conservation Benefits

Stage	Type of benefit	Benefits
Production	Water use reduced ^{*1}	125,505 t
	Electricity reduced ^{*1}	203,034 MWh
	Natural gas reduced ^{*1}	16,294 thousand m ³
	Heavy oil reduced ^{*1}	0 kl
	Emissions of target chemical substances reduced ^{*1}	16 t
	Resource input reduced ^{*1}	107,184 t
	External recycling and reuse of waste ^{*2}	12,922 t
Sales	Packaging reduced ^{*1}	419 t
	Recycling and reuse of materials from used products ^{*2}	14,117 t
Usage	CO ₂ emissions reduced ^{*3}	14,824 t

*1 Calculated by subtracting the actual consumption amount from the consumption amount estimated for cases in which the environmental conservation activity was not implemented.

*2 The environmental conservation benefits are calculated as the volume recycled and reused.

*3 CO₂ emissions are calculated for major new products that were shipped in this fiscal year by subtracting the estimated CO₂ emissions associated with the new products in use from the estimated CO₂ emissions associated with the conventional products in use.

Fiscal 2019 Results: Impact of End User Usage

Stage	Type of benefit	Benefits
Usage	Electricity consumption reduced ^{*4}	29,530 MWh
	Electricity bills reduced ^{*5}	425 million yen

*4 Electricity consumption reduced is calculated for major new products that were shipped in fiscal 2019 by subtracting the estimated energy consumption of the new products in use from the estimated energy consumption of the conventional products in use.

*5 Calculated by multiplying the average electrical power unit price over the Group's production sites in Japan by the amount of electricity consumption reduced.

Environmental Communication

Basic Concept

The entire Konica Minolta Group is working to carry out environmental conservation activities and to reduce the environmental impact associated with its business activities. The Group actively provides information on the planning and progress of these efforts. By developing close communication with various stakeholders, Konica Minolta intends to fulfill its responsibilities as a good corporate citizen.

The Group distributes information through its website. In order to inform customers of the environmental performance of its products, Konica Minolta seeks to provide this information through environmental labels. It is actively pursuing various social contribution activities while creating regular opportunities for direct dialogue with community members.

Provision of Product Environmental Information

- › Environmental and Social Contribution Activities

Social Innovation

Our Concept

The recent worldwide emergence of social concerns such as climate change, resources and energy, a declining birthrate, and an aging population has spurred calls for innovation that can help solve these issues.

Konica Minolta is integrating the strengths developed in its business over the decades with the latest digital technologies to provide high value-added products and services to different types of customers in various industries. By doing so, Konica Minolta aspires to contribute to the achievement of the Sustainable Development Goals (SDGs) while also helping business and human societies to evolve.

Konica Minolta's Approach

Konica Minolta's Approach

Background and Issues

To remain a company that is valued by society, Konica Minolta must continue to develop innovative technologies that contribute solutions to social issues.

Based on this concept, the company is focusing on increasing its capacity to contribute solutions to social issues when developing new businesses.

Vision

Konica Minolta believes that reforming the workflow used by people who work in offices, medicine and industry leads to solutions for various social issues. The company seeks to leverage its technologies, human resources and networks to create a wide range of businesses that help to solve the issues faced by its customers and society.

Key Measures

- Promoting new business development through core technologies and open innovation
- Promoting business development at the company's five Business Innovation Centers (BICs)

Providing Nursing Care Solutions to Address the Issues of a Super-Aged Society—HitomeQ Care Support

Related SDGs

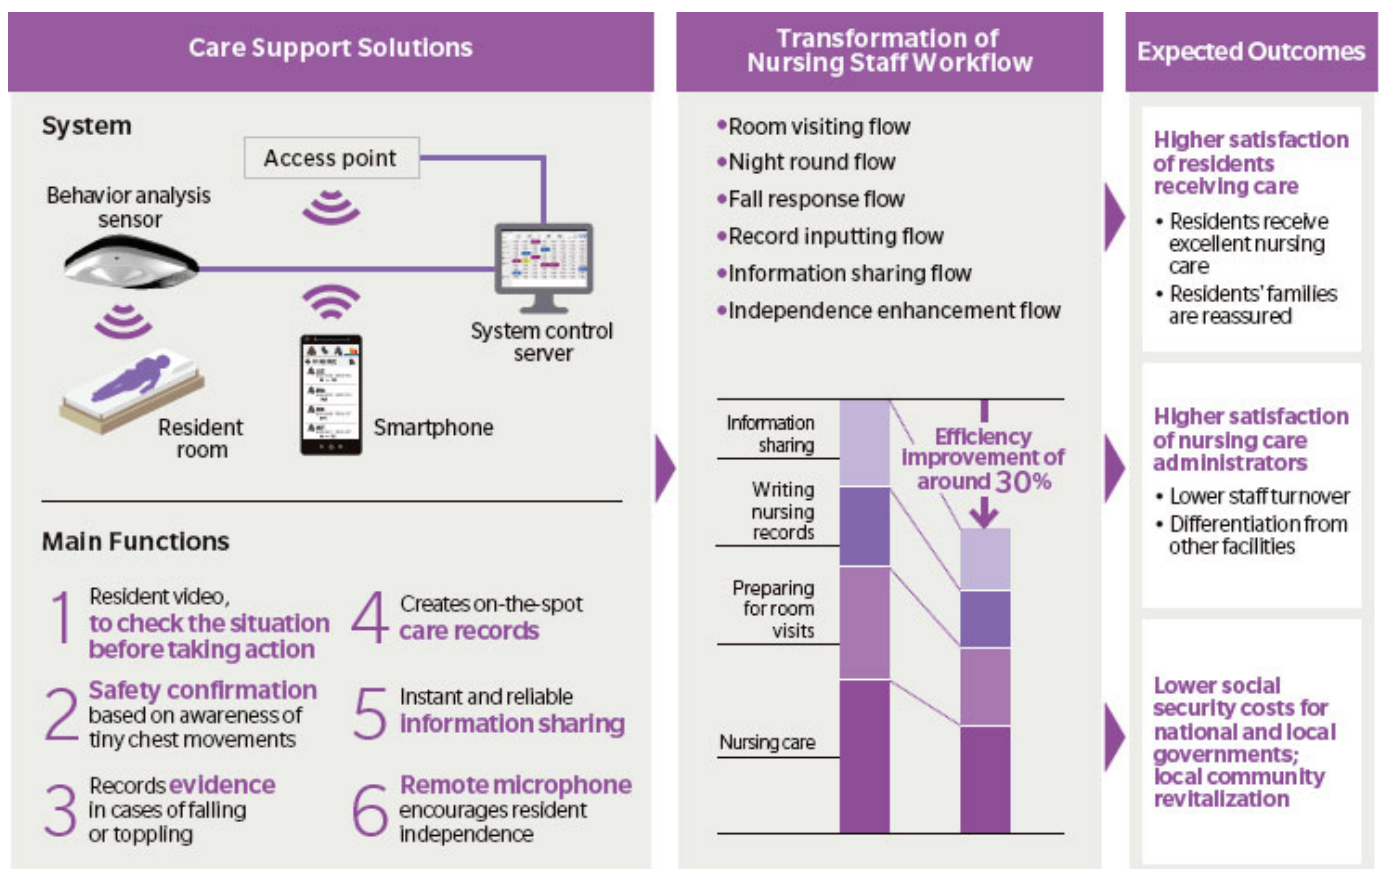

Transforming Nursing Care Staff Workflow and Helping to Eliminate Chronic Nursing Care Staff Shortages

With the number of people needing nursing care in Japan increasing in recent years, the shortage of care workers has become a social issue. To address the situation, Konica Minolta developed and offers HitomeQ Care Support, a service that transforms nursing care workflows. This service detects certain resident behaviors using near-infrared cameras installed on the ceiling along with sensors that detect movement, and then notifies nursing care staff through their smartphones. It helps the staff to determine the best response after grasping the situation and enables information sharing among staff in real time, greatly improving the efficiency of work.

One facility where this service was introduced reported an average efficiency improvement of 30% for nursing care staff. The extra time saved can now be used to enhance resident self-sufficiency, such as through rehabilitation assistance, and for education and training for nursing staff. This, in turn, enables provision of higher quality care, which has improved the satisfaction of residents and their families as well as nursing staff and facility administrators.

In 2019, Konica Minolta enhanced its system solution offerings by introducing a new comprehensive service. The new service includes an operation diagnosis function to identify issues, implementation training, a care support system to support frontline transformation using image technology, and a Care Director Service for human resource development and procedure creation consulting.

Launch of a New Service Brand: HitomeQ

Konica Minolta has been offering Care Support Solutions, a service that provides not only IT devices but also a system that uses them. Under that name, however, it has been difficult to fully convey the benefits of the service to customers. The company addressed this by rebranding the service in October 2019. The new brand is designed to convey the philosophy of Konica Minolta's quality of life business to customers and partners, and evokes a commitment to supporting daily activities that are in the best interests of stakeholders.

Since this service provides value for people, the new brand concept is based on "heart, technology and good physical condition." The brand name, "HitomeQ," embodies the idea of "working with customers to create a world where all stakeholders beam with anticipation." The "Q" in "HitomeQ" stands for "quality of life."

Moving toward Greater Use of IT in Nursing Care Settings

Pioneering the Future of Nursing Care in Japan through Diverse Partnerships

Masanori Miura

President and Representative Director
Konica Minolta QOL Solutions, Inc.

Developing Care Directors at Nursing Care Facilities and Achieving Workflow Innovation

Care workers often need further training to master the use of IT devices on the job. This is the key to transforming the frontlines of nursing care using IoT, and also the reason Konica Minolta developed HitomeQ Care Support. With HitomeQ, human resources in nursing care facilities are trained as "Care Directors" capable of using IT in the care setting. We also offer a Care Director Service that provides consulting for organizational transformation. As part of this service, the data accumulated by IT system is used to help plan a drastic revision of facility procedures and other measures, together with the staff. For instance, our data analysis showed that night rounds actually disturb residents' sleep. So, we tested what would happen if night rounds were stopped. The number of times residents got out of bed decreased and they got better sleep as a result. Fewer times getting out of bed also lowers the risk of falls. Moreover, the nursing staff's workload was also decreased by reducing the number of times they visit rooms at night.

Making use of data in this way should also allow the care needed by individual residents to be predicted in the future, changing the way the nursing staff works and increasing the quality of care.

Test Result of Stopping Night Rounds

(1) Reduction in nursing staff's workload at night (index when the number of nighttime room visits before test is 100)

(2) Increase in residents' quality of life (sleep) due to (1) (index when number of times getting out of bed before test is 100)

Gathering Colleagues Who Share Our Philosophy and Strategy and Recommending Use of IT in the Nursing Care Industry

The Japanese Ministry of Health, Labour and Welfare estimates that in 2025, there will be a shortage of 340,000 nursing care staff members. This shortage is a social issue that Japan cannot afford to put off addressing. At this rate, supply and demand will go out of balance, and we could end up with a society where people cannot receive adequate nursing care.

Out of awareness of this problem, Konica Minolta started a social business collaborative effort—the Care Philosophy Partners Conference (CPPC)—with care providers, IT service companies specialized in nursing care, and others. Around 100 companies have joined so far. Among them, Konica Minolta has built especially strong collaborative relationships with Welmo, Inc.,*1 BI Brid Co., Ltd.,*2 and Zenkoukai.*3 The thing that each company has in common is a shared philosophy and strategy to “achieve a world of harmonious co-existence that increases quality of life in the form of greater independence for seniors and greater job satisfaction for caregivers.” While they each have a high degree of specialization, the companies do not take an individual-company approach but rather leverage their individual strengths combined, sharing the same philosophy and strategy, in an effort to solve issues faced by the nursing care industry.

Additionally, Konica Minolta carries out demonstration testing in collaboration with universities and business operators to improve frontline efficiency in nursing care. We hope to use the results to make recommendations to the Council on Investments for the Future*4 regarding improvements to staffing standards for nursing care facilities based on use of IT.

*1 Welmo, Inc.: Provides a regional care information platform to professionals. It has also developed an AI system to support the production of care plans requiring medical and nursing knowledge.

*2 BI Brid Co., Ltd.: Operates an IT help desk/support business specializing in the nursing care, welfare, and medical fields, an IT consulting business, and a business supporting product development for the nursing care field.

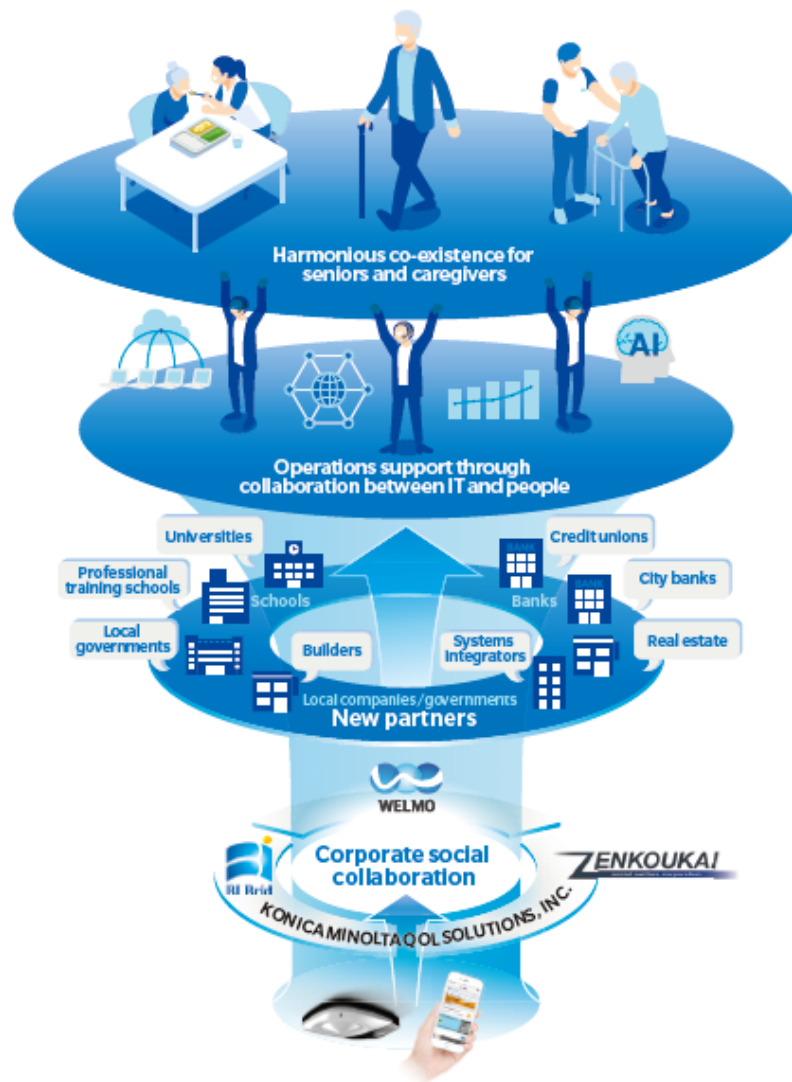

*3 Social Welfare Corporation Zenkoukai: Business includes operation of special nursing homes and group homes for people with dementia. Actively adopts various kinds of technology with the aim of visualizing operations and practicing scientific nursing care.

*4 Council on Investments for the Future: A council, chaired by Japan’s Prime Minister, that convenes with the purpose of accelerating growth strategies and structural reform aimed at expanding investment in future economic growth fields.

Coverage Including the Home Care/Nursing Field under the Concept of “Connected Care”

We believe that behavioral record data on seniors can be utilized not only in nursing care facilities but also in home care and preventive care. In home care, for example, we think that sensible care plans can be made as much as possible without changing people’s lifestyles by gathering and analyzing data on the behavioral patterns not only of seniors but also their families. Our HitomeQ Care Support is based primarily on acquisition of data in bedrooms, but in the future, we plan to provide new value by sharing, interconnecting, and analyzing data held by companies that have joined CPPC. I call this “connected care.” The goal is to work with various stakeholders to create a mechanism that allows the same level of care to be received at home as in a facility. In preparation for such an era of scientific nursing care, we are developing an educational program using our HitomeQ Care Support in nursing care schools. By creating opportunities for people hoping to go into nursing care to be exposed to IT, we intend to train care workers who have a strong command of IT.

Solving Social Issues with Corporate Social Collaboration

Voice of a Corporate Social Collaborator

Using IT to Co-create a Standard of Nursing Care

Kouhei Takeshita
President, BI Brid Co., Ltd.

The introduction of IT in nursing care facilities is still in the early phases. It is still the common practice to write out care records on paper by hand, and being up to one's neck with such production of records is a burden. In some cases, that is the reason people leave their jobs. The truth of the matter is that care staff members in many frontline care settings do not feel the need to adopt IT and are unfamiliar with computers. The IT system provider, on the other hand, has hardly any products that match the IT skills of users, as it does not know the nursing care industry or frontline needs. This unfortunately results in many cases where IT has been introduced but then goes unused. In other words, just introducing IT is not enough. It is only when IT is used properly that it leads to improved efficiency. Thus, it cannot be achieved without suitable support for users. That is why BI Brid gives advice to system providers about making products that will be useful in nursing care settings and also gives advice and support to care staff so that they can make the most of those products. I hope that Konica Minolta will produce best practices in IT adoption in nursing care settings across the country through HitomeQ Care Support. I hope that it will become the standard for nursing care operation. The issues faced on the frontlines of nursing care are a problem that will impact the future of this country—the future of each of us. I believe this is a matter that can no longer be addressed by individual companies; it must be tackled by lots of companies working together. I hope to take advantage of this corporate social collaboration with Konica Minolta to leverage IT to change the future of nursing care.

Supporting customers to Digital Transformation—Workplace Hub

Related SDGs

Workplace Hub

Supporting customers to Digital Transformation

All business sites nowadays have a rising need to utilize digital innovation to generate greater efficiency and productivity, as well as to enable teleworking. However, many small and medium-size enterprises are still tied to paper documents and conventional workplaces due to issues such as a shortage of IT personnel and administrative burdens. Konica Minolta's Workplace Hub, which is being rolled out globally after its launch in Europe and the US in fiscal 2018, is an all-in-one IT service package that is customizable to corporate clients' business challenges. It combines IT infrastructure/ services, multi-functional peripherals (MFPs), and maintenance/management. Workplace Hub provides an IT environment safeguarded by world-class security and offers "work styles that are a step ahead" based on the IT system maturity. By ensuring safety and security for personnel working remotely, while helping to promote collaboration in and outside the company, Workplace Hub can facilitate the customer's digital transformation (DX).

Workplace Hub, a workflow transformer

Supporting Drug Discovery as Well as Accurate and Efficient Cancer Diagnosis—Precision Medicine

Related SDGs

Precision Medicine

Supporting Drug Discovery as Well as Accurate and Efficient Cancer Diagnosis

The significant side effects and ballooning costs of cancer treatment have become social issues. Precision medicine, in which medications are chosen for patients who have been grouped according to their physiological characteristics as analyzed based on genes and proteins, is gaining attention as a solution. Konica Minolta makes accurate and efficient cancer diagnosis a reality by combining its original technology for making visible specific proteins such as those found in cancer cells with technologies of two Konica Minolta Group companies in the US. In July 2018, Konica Minolta established Konica Minolta Precision Medicine Japan, Inc., a new company that will provide services in the field of precision medicine in Japan. In June 2019, Konica Minolta began joint R&D on next-generation comprehensive cancer gene panel testing with the University of Tokyo and the National Cancer Center Japan Research Institute. This has launched the company's full-scale participation in the effort to promote cancer genomic medicine in Japan. In addition, Group company Ambry Genetics Corporation, a major genetic diagnostic provider in the US, is engaged in intensive preparations to deliver a COVID-19 test (PCR test) to various organizations including the government. Going forward, Konica Minolta will continue to provide comprehensive services to pharmaceutical companies, academia, medical institutions, companies and employers.

Original technology differentiates cancer cells

Contributing to Safety and Security as well as Environment-friendly Operation by Visualizing Gas Leaks --Gas Monitoring Solution

Related SDGs

Gas Monitoring Solution

Contributing to Safety and Security as well as Environment-friendly Operation by Visualizing Gas Leaks

In recent years, growing risk of incidents and/or fires that originate as a gas leak events due to deterioration of plants in Japan has become a social issue needing to be addressed. At the same time, given the advance of an aging society coupled with a low birthrate, the number of skilled maintenance operators is also declining. This has created a need for continuous monitoring that does not rely on labor skills but can secure the operation safety during gas leak repairs. Konica Minolta provides a solution that enables early discovery and handling of abnormalities through continuous plant monitoring. Using Konica Minolta's optical technology and image processing technology to visualize the sourcing point and concentration level of gas leaks enables maintenance operators to conduct appropriate maintenance operation of the plant regardless their maintenance skill levels.. In fiscal 2019, Konica Minolta was awarded a full-scale development project for the next three years after passing a careful stage-gate assessment by Japan's New Energy and Industrial Technology Development Organization (NEDO). Through this project, Konica Minolta will contribute to the realization of sustainable society by vigorously devoting itself to this and other social implementation.

Gas monitoring solution makes gas leaks visible

Addressing Medical Challenges in Emerging Countries with Remote Healthcare – Remote Healthcare Using Portable Medical Devices

Related SDGs

Remote Healthcare Using Portable Medical Devices

Addressing Medical Challenges in Emerging Countries with Remote Healthcare

In Bangladesh, lifestyle-related diseases are skyrocketing, and quickly responding to patient needs is a critical issue in the healthcare field. In rural areas, where 60% and more of the population lives, there is a shortage of medical facilities, equipment, and doctors. In order to receive medical treatment, patients must travel considerable distances to urban areas.

To address this challenge, Konica Minolta devised a remote diagnostic system that allows a rural clinic to take patient X-rays using portable equipment and upload the imaging data to the cloud, allowing doctors in the city to view the X-rays and make the appropriate diagnosis. After conducting a diagnostic pilot in 2017, paid medical examinations have been underway since September 2018 in the capital of Dhaka and the surrounding region, in a project adopted by the Japan International Cooperation Agency (JICA). Going forward, Konica Minolta will increase the number of examination sites outside the Dhaka region and prepare to verify the health checkup model by analyzing collected data.

Using Digital Technology to Reduce the Environmental Impact of Commercial Printing-- Digital Inkjet Printer AccurioJet KM-1

Related SDGs

Digital Inkjet Printer AccurioJet KM-1

Using Digital Technology to Reduce the Environmental Impact of Commercial Printing

Rising environmental awareness is driving demands for the field of commercial and industrial printing to break away from conventional methods where large amounts are printed and surplus is discarded. In the world of marketing, meanwhile, labels and packages for each event are being produced in small lots, and product/marketing strategies targeting individual consumers, such as including specific people’s names, is gaining ground.

Konica Minolta’s digital inkjet printer AccurioJet KM-1 produces high image quality comparable to that of conventional offset printing and can handle a wide range of printing papers. It enables production of printed matter in just the quantity needed, at the time needed, to suit the customer’s exact needs. This, in turn, reduces environmental impact by minimizing waste. This solution also helps to reduce the labor-hours needed in the printing process due to its user-friendly operability, even for unskilled workers.

Digital inkjet printer AccurioJet KM-1

Supporting Foreign Language Communication at Worksites with KOTOBAL

Related SDGs

Hybrid Multilingual Interpreting Service KOTOBAL

Supporting Foreign Language Communication at Worksites

Konica Minolta operates Business Innovation Centers (BICs) in the five major regions of the world—Japan, Asia Pacific, China, Europe, and North America—with the goal of generating new thinking and creating innovative businesses. The BICs are carrying out about 100 projects, in which they collaborate with universities and venture firms and employ diverse innovative perspectives.

In 2019, BIC Japan brought to market a new hybrid multilingual interpretation service, KOTOBAL, which was developed in Japan in October. This service mainly supports communication with customers who do not speak Japanese in highly specialized environments such as service windows at financial institutions and administrative agencies. It was developed by adapting MELON, a communication support service for medical institutions commercialized by the BIC Japan in 2016. KOTOBAL supports 30 languages including English, Chinese, Korean and Portuguese. By combining AI-based machine interpretation with video interpretation using a human interpreter, conversations with non-Japanese speakers involving many technical terms can be carried out easily.

A cross-lingual conversation using KOTOBAL

Customer Satisfaction and Product Safety

Basic Concept

Aspiring to maximize customer satisfaction and trust

Konica Minolta aspires to maximize customer satisfaction and trust by providing products and services of superior value. The Group has articulated its basic approach to accomplishing this in the Konica Minolta Quality Policy, which governs Group companies worldwide. An issue of particular importance is ensuring safe, reliable products and services. Accordingly, Konica Minolta has established a unified quality assurance system across the Group, and addresses quality assurance in terms of the entire product lifecycle. Konica Minolta is determined to help create a better world by solving customers' challenges, and to do this it seeks to build deeper relationships with customers so that it can discover and satisfy both latent needs and apparent requests.

Quality Management Policy

Implementing thoroughly a policy that places top priority on customer satisfaction and quality

Konica Minolta has articulated its basic concept for earning customer satisfaction and trust in the Konica Minolta Quality Management Policy. By sharing this policy with Group companies around the world, Konica Minolta tries to ensure that top priority is placed on customer satisfaction and quality.

Based on this policy, the Group strives to improve not only the quality of products, but also quality across the board, including maintenance and service.

Konica Minolta Quality Policy (excerpts)

The Konica Minolta Group ensures maximum satisfaction and trust of its customers, paying the utmost attention to customers and giving top priority to the quality of products and services.

Our concept is to make steady progress in quality based on quantitative measurement and analysis of accurate data. This basic concept is demonstrated in the following affirmations:

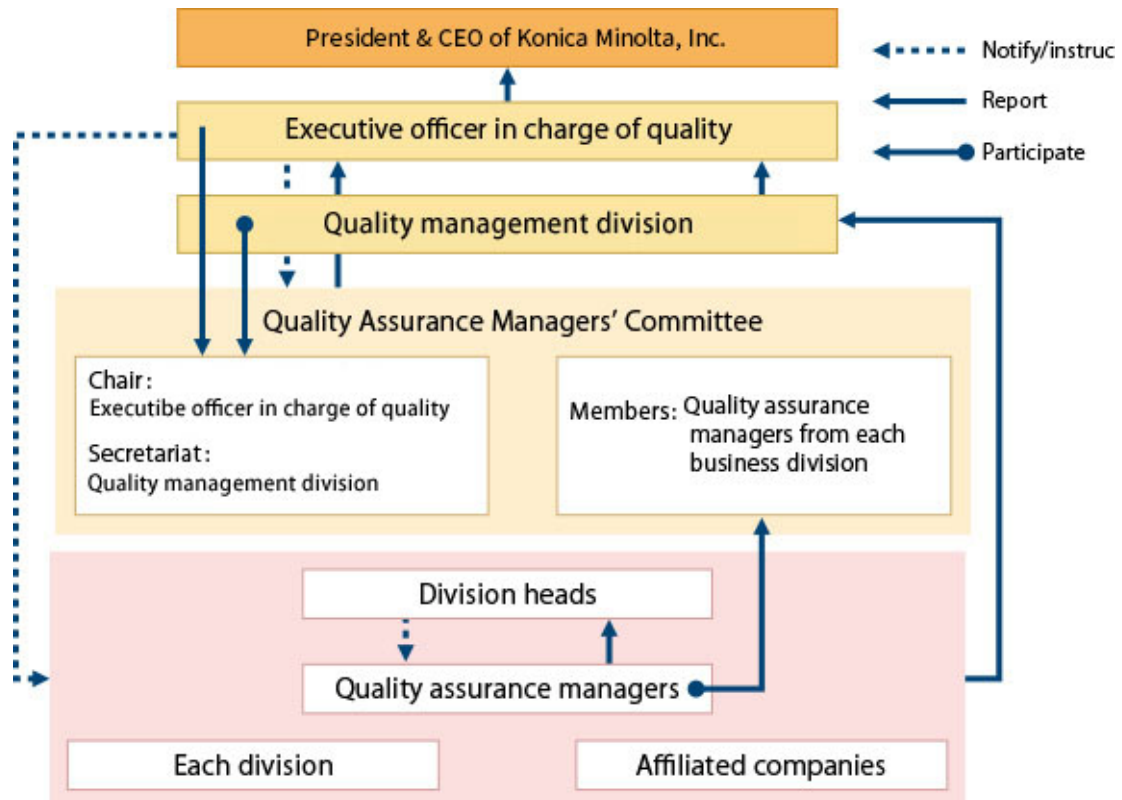

1. Achieving the industry's top level of Customer Satisfaction
2. Providing advanced products that satisfy customers' potential needs
3. Establishment and development of a global Quality System.
4. Quality Management in the total life cycle of products and services
5. Continued enhancement of our Quality Assurance Process
6. Minimization of product quality risks
7. Disclosure of product safety information

▶ [Konica Minolta Quality Policy](#)

Quality Management System

The executive officer in charge of quality oversees all quality management operations

Konica Minolta, Inc. has established a Quality Assurance Managers' Committee that supervises Group-wide quality management. This committee is chaired by the executive officer, who has responsibility for and authority over the quality issues of the entire Group. The committee meets on a quarterly basis, in principle, and in addition to promoting quality planning and monitoring progress, it shares and scrutinizes information concerning quality assurance. Furthermore, each business works to continuously improve quality by thoroughly implementing the PDCA cycle for quality issues..

Quality Management

Konica Minolta Quality Policy

The Konica Minolta Group ensures maximum satisfaction and trust by our customers, paying the utmost attention to our customers and giving our top priority to the quality of products and services.

Our concept is to make steady progress in quality based on quantitative measurement and analysis of accurate data. This basic concept is demonstrated in the following affirmation:

“ Management Based On Facts”

1. Achieving the industry's top level Customer Satisfaction

We will provide products and services of high quality and high reliability to achieve the industry's top-level of Customer Satisfaction through continuous analysis of market trends and steady efforts for improvement.

2. Providing advanced products that satisfy customers' potential needs

We will always pursue ease of use from our customers' viewpoint with products on the cutting-edge of trends.

3. Establishment and development of a global Quality System

We will establish and develop a global integrated Quality System throughout the Konica Minolta Group, including worldwide affiliated companies.

4. Quality Management in the total life cycle of products and services

We will implement Quality Management to achieve our target based on quantitative measurement of quality at each life-cycle stage of products and services -- starting from planning, developing, manufacturing, usage, and disposal.

5. Continued enhancement of Quality Assurance Process

We will continue to improve job processes voluntarily and aggressively in order to enhance the Quality Assurance Process.

6. Minimization of product quality risks

We will take proactive measures and promptly respond to our customers in order to eliminate risks to our customers and our company caused by quality problems.

7. Disclosure of product safety information

We will actively disclose product safety information to ensure our customers will use our products without any anxiety and to fulfill our accountability to society.

Konica Minolta's Approach

Background and Issues

Ensuring product safety and security is essential for delivering consistently high quality. It goes without saying that Konica Minolta strives to improve the quality of and ensure the safety of the hardware it provides. With the advancement of IoT, Konica Minolta also recognizes that a more robust approach to IT threats is crucial to sustainable growth, as they can cause serious damage to customer operations.

Vision

To deliver value to customers, Konica Minolta continually seeks to enhance its products, incorporating cutting-edge technologies. Simultaneously, the Group is raising awareness among employees about addressing quality from the customer's perspective, while continuously enhancing quality management activities. The aim is to provide customers with products and services that offer even greater convenience, safety and peace of mind.

Key Measures and KPIs

- Enhancing product risk assessments and improving quality awareness: Number of serious product-related accidents*¹ in fiscal 2020-2022: 0

* Serious product-related accidents refer to those accidents that cause serious harm to the product user's life and/or body and accidents that cause serious damage to assets other than the product.

Improving the Quality Assurance System

Taking various steps to improve the quality assurance system

Konica Minolta has established a quality assurance system. It is striving to improve its ability to resolve market quality problems that are related to the safety of products and services and is working to avoid serious accidents and reduce quality problems.

Investigating Quality Problems via Regular Meetings

Konica Minolta regularly holds quality meetings across the Group to discuss product safety and other quality-related issues and work to continuously improve quality by thoroughly implementing the PDCA cycle.

Addressing Market Quality Issues

Whenever a problem related to product quality occurs, sales sites around the world are required to register information in a Group-wide critical accident report database immediately. Registered information is instantly sent to the appropriate supervisor and shared with relevant departments. Using this system, the Group takes action to prevent a recurrence by thoroughly investigating all registered incidents, analyzing the causes, implementing countermeasures, and reflecting these in technical and assessment standards. In the unlikely event of a safety-related incident, a report will be immediately filed with the supervisor of the individual business and shared with the executive officer in charge of quality, as well as with the departments in charge of quality assurance, corporate communications, and legal affairs, regardless of the cause of the problem. When a quality problem with a potentially serious risk arises, a Quality Problem Countermeasure Conference is convened based on the Market Quality Management Rules in order to promptly deal with the issue and ensure thorough information disclosure.

Serious Product-related Accidents over the Past Five Years

	FY2015	FY2016	FY2017	FY2018	FY2019
Number of Accidents	0	0	0	0	0

Serious product-related accidents: Accidents in which products put the lives of product users at risk or cause serious bodily injury and those in which property other than the products is damaged seriously

Scope: All Konica Minolta products

Enhancing Product Safety Standards

MFPs and printers used in offices must be designed so that misuse and break-downs do not cause electric shocks, smoking, or injuries to users. For this reason, Konica Minolta has established independent product safety standards that exceed the requirements of the legal standards and have rules requiring the detailed check of every aspect of its products. Past quality problems are thoroughly analyzed, the causes are identified, and measures to deal with the problems are investigated. The results of this process are reflected in updated product safety standards. Continuous implementation of this process prevents the recurrence of quality-related problems and prevents new problems from arising.

Taking Steps to Ensure Safety

Expanding efforts to ensure product safety throughout the entire Group

Product Safety Training

Konica Minolta has developed a Group-wide product safety education system for technicians involved in design and development, manufacturing technology, procurement, and quality assurance. The courses are designed to increase technicians' knowledge of product safety issues and increase their awareness of potential problems.

In fiscal 2014, the Group also implemented a Risk Assessment Improvement Program focusing on risk-finding and assessment exercises using actual machines so that the knowledge and skills developed by participants in past training can be put into practice in actual operations. A questionnaire was given to trainees after the course was finished to verify that it is benefiting them in their actual work. The results have been fed back to the training planners to help improve the content of the program. Going forward, Konica Minolta will continue to improve employees' product safety awareness and raise the level of their skills by providing continuing education.

Risk Assessment Improvement Program

Application of Risk Maps

Konica Minolta utilizes risk maps as a way to assess product safety. These maps describe the degree of risk by the severity and frequency of aftermarket accidents. Using these maps, the Group undertakes objective assessments of the risk of product quality problems in the market and evaluates the effect of countermeasures. The Group pursues high safety levels by using the risk maps as risk assessment tools in the development process as well.

Specifically, the Business Technologies Business and the Healthcare Business consolidate, scrutinize, and identify, in accordance with stated rules, information provided by customers worldwide. With respect to information involved in product safety, they apply risk management techniques. By clarifying its criteria, the Group can respond quickly to the market, determine essential causes, and improve procedures.

Safe Product Design Based on Combustion Test Data from a Laboratory

Konica Minolta designs its products to eliminate any chance of them catching fire or emitting smoke. However, in the event that such an incident or a building fire should occur, products must have a fire-resistant design to prevent the spread of fire. Therefore, fire-retardant plastics are selected when designing products. In order to get accurate data on fire safety, products need to be subjected to combustion testing.

Konica Minolta has set up a reliability testing laboratory at its Tokyo Site Hachioji. This is where tests can be conducted to obtain detailed information on product combustibility using cutting-edge analysis techniques. The laboratory is also equipped with advanced equipment to treat smoke exhaust, enabling combustion testing to be performed without any impact on the local environment.

Taking Steps to Improve Quality

Improving quality awareness in the workplace and promoting the horizontal rollout of effective approaches

Sharing Information about Quality Problems and Cross-deploying Countermeasures within the Group

Konica Minolta is accelerating its Group-wide effort to disclose information regarding quality problems and cross-deploy countermeasures as a policy "One Konica Minolta." The goal is to increase sensitivity to quality issues, thereby resolving problems early on and ensuring better response.

As a specific measure of the cross-deploying efforts, the Group conducts Production Capability Assessments at production sites, including sites outside Japan. Members of each site serve as assessors in this effort to perform mutual cross-assessments of businesses. Assessments are designed to visualize issues at each site by quantifying different aspects, such as the 5S's (Sort, Straighten, Shine, Standardize, and Sustain), visualization, elimination of inefficiencies, and factory management. The 5S's and visualization are intended to encourage proactive improvements on the production floor by presenting ideals as guidelines. Additionally, good practices are cross-deployed by sharing assessment results and examples of initiatives from each site on the company intranet.

In fiscal 2019, measures were taken to further prevent quality fraud by making improvements based on the guidelines established by the department in charge of quality assurance. Horizontal deployment of good practices was also promoted.

Initiative for the Development of Quiet Products

Konica Minolta is pursuing the development of quiet products that do not disturb the office environment by measuring and analyzing various sounds that are generated by MFPs and printers. As part of this effort, the company carried out joint development with a university to find a method for analyzing noise generated by products. After devising a method, the company could predict the noise level of planned products, thereby facilitating the development of quieter office products for more pleasant work environments.

Konica Minolta has obtained ISO/IEC 17025* accreditation for testing product noise levels. By utilizing its test laboratory with world-class acoustic characteristics, the company is able to carry out the in-house acoustic measurements needed to apply for Germany's "Blue Angel Mark" eco-label.

The inside of the acoustic test laboratory

* ISO/IEC 17025: General requirements for the competence of testing and calibration laboratories.

▶ [News Release: Acoustic Test Laboratory Gains Qualification to Apply for Germany's "Blue Angel Mark" Eco-Label](#)

Verifying Whether Printers are Compatible with a Variety of Paper Types

In on-demand commercial printing, customers require the ability to print on various kinds of stock, including heavy-weight, light-weight, glossy, and rough-finish papers. Regarding MFPs in offices, the use of recycled paper or thin paper is increasing due to consideration for the environment.

In response to these needs and to make products compatible with more types of paper, Konica Minolta is conducting verification of image reproduction and paper feeding on a diverse array of paper types in its Media Evaluation Center. The characteristics of several hundred types of paper from around the world are measured, and the center verifies the optimal settings for each type by conducting printing tests on actual MFPs.

Based on the measurement and verification results obtained, the optimum printing conditions for each paper type are "packaged," and profiles are created to enable high-quality printing on various papers. By equipping its digital printing presses with these paper profiles, Konica Minolta delivers highly reliable condition settings for various types of paper. This in turn enables even greater operating efficiency for customers.

Media Evaluation Center

New Initiatives for the IoT Era

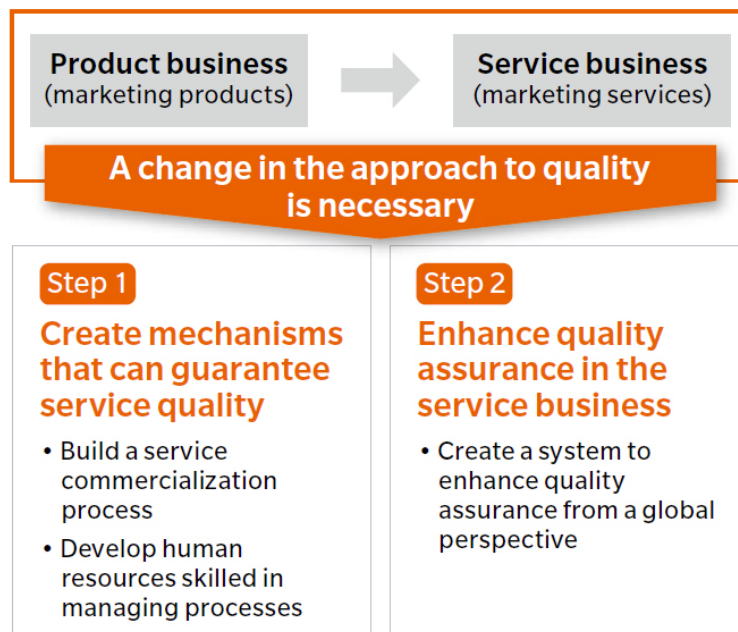

Creating a Quality Assurance System in Service Business Areas in the IoT Era

In service business areas, the company believes it must shift from product quality assurance to service quality assurance and establish the most innovative processes. Services are different from manufactured products as they lack physical form, their quality cannot be checked in advance, and they highlight the importance of process in addition to results.

Consequently, it is a challenge to predict and manage highly reliable quality.

Based on this shift, the company is working to build a service commercialization process. This will include establishing quality standards suited to the features of products in this area as well as creating management guidelines. This effort aims to create a mechanism for quality assurance for the entire life cycle of the service business. It also provides training on skills needed in the IoT service business to develop human resources skilled in process management.

Konica Minolta is developing service businesses in proximity to its customers, with sites all around the world. A global outlook is crucial for creating a mechanism that ensures strong quality assurance worldwide.

Konica Minolta's Approach

Background and Issues

As a “digital company with insight into implicit challenges,” Konica Minolta is working to develop and provide products and services utilizing the latest digital technologies such as IoT and artificial intelligence (AI). Yet, simultaneously, cyber-attacks targeting individuals and companies continue to rise, their methods becoming subtler and more sophisticated. Products and services offered by Konica Minolta may also pose a risk of exposing customers to data security threats. Therefore, efforts are required to ensure secure products and services, and to prevent product security incidents in the marketplace. In the event of a security breach, Konica Minolta is committed to pursuing a quick recovery and resolution to minimize customer damage.

Vision

Konica Minolta aims to raise each employee’s quality assurance awareness from the customer’s point of view, achieve quality of high-reliability in its products and services, and also provide products and services that, in terms of security, can be used safely and securely.

Key Measures and KPIs

- Promoting secure development and operation processes (development of product security guidelines)
- Gathering and addressing vulnerability information (KONICA MINOLTA PSIRT)
- Responding in the event of a product security incident
- Number of serious security incidents*¹ in products and services: 0

*1 Serious security incidents refer to those product-security incidents that cause serious and significant harm to the product user’s business

Promoting Secure Development and Operation Processes

Konica Minolta is committed to developing and operating secure products and services.

Konica Minolta is committed to preventing serious security incidents by developing and providing secure products and services and taking initiatives to operate and maintain them securely.

Product Security Guidelines

Konica Minolta has established product security guidelines as internal regulations and procedures for assuring secure development and operation, and it carries out secure development and operation processes for products and services across the Group. Development and operation in conformity with the product security guidelines apply, in principle, to all products and services of the Konica Minolta Group. This commitment lasts the entire life cycle, from the planning and proposal of products and services to their disposal and end of service, and includes the supply chain, such as development and operation contractors and suppliers.

In addition, Konica Minolta regularly holds company-wide product security promotion meetings to discuss product security issues, and strives to continuously enhance its security level by sharing information on the most effective practices from inside and outside the company.

Thread Analysis and Security Measures

When developing products and services, Konica Minolta conducts threat analyses in the upstream stage of development in order to eliminate system design vulnerabilities and prevent security incidents from occurring down the line. Envisioned security threats to assets that need to be protected are comprehensively identified, and security measures to counter those threats are studied and reflected in the requirements definition.

Vulnerability Assessment

Software developed by Konica Minolta, and the Open Source Software (OSS) modules and applications incorporated into it, may have security flaws called vulnerabilities. Since releasing vulnerabilities can lead to security incidents caused by cyberattacks, vulnerability assessments must be performed during the development phase and any problems must be fixed before the launch of the product or service. Konica Minolta centrally manages OSS usage across the company and has made available multiple static analysis tools (SAST) and dynamic analysis tools (DAST) as company-wide vulnerability diagnostic tools to detect and correct software and system vulnerabilities. In addition, regarding products and services for which security risks are of particular concern, Konica Minolta takes even stronger security measures, such as outsourcing penetration testing.

Secure Operation and Maintenance

Konica Minolta has established and deployed within the company guidelines for secure operation and maintenance so that following market launch customers can continue to use products and services with peace of mind. The guidelines are used in an effort to prevent security incidents caused by oversights or errors in market support.

Product Security Education

Konica Minolta has prepared several educational programs for employees to ensure the implementation of secure development and operation processes with the aim of improving employee awareness and skills in product and service security. In fiscal 2019, the company held programs in all of these areas for every new employee, product security general education, and threat analysis workshops, with approximately 500 employees having attended the sessions. The company will continue to expand and enhance its educational programs, aiming for a higher level of understanding.

Serious Security Incidents over the Past Five Years

	FY2015	FY2016	FY2017	FY2018	FY2019
Number of Accidents	0	0	0	0	0

Serious security incidents refer to those product-security incidents that cause serious and significant harm to the product user's business

Scope: All Konica Minolta products

Gathering and Addressing Vulnerability Information

Konica Minolta will continue to gather and address vulnerability information after shipment and/or operation commencement of products and services, to continue providing safe and secure products and services.

Gathering and Addressing Disclosed Vulnerability Information

New vulnerability information for software is discovered and reported daily. In 2019, information on more than 17,000 new vulnerabilities was released by NIST's^{*2} NVD^{*3} in the United States in that one year alone. That is why it is necessary to gather vulnerability information and address the vulnerabilities even after the launch of products and services. Konica Minolta monitors this information on a daily basis, including open databases of vulnerability information other than NVD. This allows Konica Minolta to catch information that may affect its products and services at an early stage and spread it throughout the company while implementing countermeasures and mitigation steps as necessary to reduce risks for affected products and services.

*2 NIST: National Institute of Standards and Technology

*3 NVD: National Vulnerability Database, released by NIST

KONICA MINOLTA PSIRT

In December 2017, Konica Minolta established and began operating KONICA MINOLTA PSIRT^{*4} as a company-wide organization for cooperation with external public organizations. PSIRT centrally manages information on product and service vulnerabilities throughout the company and takes necessary measures. It also works with the CSIRT team, which handles security incidents for internal IT assets, to establish a system to roll out necessary responses globally. Furthermore, in May 2019, it joined FIRST^{*5}, an international forum of approximately 500 CSIRT and PSIRT teams from 92 countries, and put in place a system that enables intra-company information coordination and contribution to security.

If PSIRT discovers vulnerability information that could affect Konica Minolta's products and services, it follows internal rules governing how to handle vulnerability information to verify, triage, and address the vulnerabilities, and consider the disclosure of information as necessary. The internal rules are based on NIST's Cyber Security Framework^{*6}, FIRST's PSIRT Services Framework^{*7}, and other Japanese and international guidelines.

An important role of PSIRT is to receive and respond to vulnerability information from external stakeholders. If vulnerabilities in Konica Minolta's products or services are discovered by security researchers, security vendors, or others, PSIRT acts as a direct or indirect point of contact to report vulnerability information. In the event a vulnerability report is received, PSIRT will take appropriate action in accordance with international vulnerability handling processes^{*8*9*10}.

Responding in the Event of a Product Security Incident

In the event of a product or service security incident in the market, Konica Minolta will strive to respond promptly.

Escalation system in the event of a product security incident

Konica Minolta works to prevent security incidents through secure development and operation processes and to gather and address vulnerability information after launch, but the possibility of problems caused by design bugs and operational oversights or errors is not zero. In addition, cyber-attack methods continue to become subtler and more sophisticated, making it nearly impossible to completely eliminate security incidents.

Konica Minolta responds to market quality issues based on its Market Quality Management Rules. In the event of a product or service security incident, it registers information in a Group-wide serious accident report database, the same as when product quality-related issues occur, and immediately sends the information to relevant persons within the company, including the executive officer in charge of quality. Information is also sent to the executive officer in charge of IT and to CSIRT, and a company-wide effort is made to quickly recover from security incidents, analyze their causes, and prevent recurrence. In the unlikely event of a leakage of a customer's confidential information or personal information due to an incident caused by a product or service, Konica Minolta will apologize and explain the facts to the customer and promptly report the incident to the relevant authorities and organizations.

Creating New Quality Value

Konica Minolta's Approach

Background and Issues

Long-term customer relationships are essential to the success of Konica Minolta's businesses in office equipment, medical devices, measuring instruments, and other products. In order for Konica Minolta to remain irreplaceable to in an era when customer needs are becoming more sophisticated and diverse, the ability to anticipate potential challenges is required.

Consequently, Konica Minolta understands the importance of visiting customer sites in order to build trusting relationships, foster collaboration, and provide solutions to problems.

Vision

Konica Minolta uses customer feedback to improve its products and services. The company strives to strengthen its relationships by helping customers achieve their unique goals. Konica Minolta aims to continually improve customer satisfaction and form strong relationships that result in a positive reputation and new customer referrals.

Furthermore, it will continue to create value for customers and contribute to the identification and solution of social issues.

Key Measures

- Continue conducting satisfaction surveys and implementation of improvements based on these results
- Improving the accuracy of verification processes for customer value creation using design thinking*

* Design thinking: A mindset and method for discovering the value that customers need. It helps create ways to realize value by applying rapid cycles of observation, understanding, issue definition, idea generation, prototyping, and verification.

Working to Improve Customer Relationship Management

Earning more trust and a higher appraisal from customers by building long-term relationships

Continuous after-sales service is necessary for products such as IT devices, medical devices, and measurement devices handled by Konica Minolta. The company is determined to increase the confidence and trust of its customers through this kind of long-term relationship and hopes to establish rapport that will lead to customers recommending Konica Minolta to other potential customers. That is why the company actively gathers feedback from customers, has established a system for using it to improve products and services, and is attempting to enhance customer relationship management Group-wide.

Heeding the Voice of the Customer

Konica Minolta provides customer assistance in countries around the world through call centers and websites set up for different products and services. In addition to responding promptly to defect information and inquiries received by each contact point, the Group also centralizes that information in its Voice of the Customer* database in an effort to ascertain the status of quality and customer requests. Additionally, each business division periodically conducts customer satisfaction surveys either through an independent organization or in-house. Moreover, the quality assurance and development personnel in addition to sales personnel make visits to customers who use the Group's products.

* The Voice of the Customer (VOC) database stores feedback gathered from call centers, interviews, and the results of market surveys.

Global Deployment of NPS® Surveys to Measure Customer Relationship Management in the Business Technologies Business

In 2012, the Business Technologies Business created a Customer Relations (CR) Division and adopted Net Promoter Score®: NPS®* as a target indicator. It developed its own scientific approach, adding NPS® to the conventional customer satisfaction survey and deploying it globally. Today, the results are being utilized to improve product and service quality.

In fiscal 2017, a transaction survey system was introduced to ascertain customer satisfaction with point-of-contact experiences, such as telephone inquiries and repair service, and to obtain NPS® scores for these points of contact. In fiscal 2019, the system was expanded to more countries, and starting in fiscal 2020, the plan is to deploy a service improvement process based on the system. It will enable the needs and negative experiences of every customer to be ascertained in real time, in order to make rapid improvements. The Division is working to further improve its NPS® scores by developing PDCA cycles to address overall issues brought to light by the NPS® surveys, and individual customer issues identified by the transaction survey.

* Net Promoter Score® (NPS®): an indicator that measures the percentage of customers who recommend the company and its products and services to others. . Net Promoter Score® and NPS® are registered trademarks of Bain & Company, Inc., Fred Reichheld and Satmetrix Systems, Inc.

Conducting a Customer Satisfaction Survey

To work proactively on improving customer satisfaction, each business unit of the Konica Minolta Group is conducting surveys with the methods tailored to the characteristics of the business concerned.

In Konica Minolta's mainstay Business Technologies Business, the focus is on NPS® as an indicator of the level customer engagement.

Since 2012, Konica Minolta has been expanding the number of countries in which it implements PDCA cycles based on NPS® surveys. The program has been deployed in 18 countries, including Japan, the United States, Europe and the Asia Pacific region. The NPS® survey results have improved every year since the full-scale global survey in fiscal 2014. In fiscal 2017 the score increased by 9 points compared to fiscal 2014, thereby achieving the high target that was set. The fiscal 2018 score and the fiscal 2019 score were up by 6 points* and 8 points, respectively, compared to fiscal 2014.

* In the CSR Report 2019 (fiscal 2018), it was reported as 9 points. Konica Minolta later reviewed the survey results and found that the correct figure was 6 points.

[Survey subjects] Corporate customers to which Konica Minolta sells directly
[Survey Period] Each fiscal year

Developing Quality Improvement Activities from the Customer's Perspective

The staff of Konica Minolta's sales companies are in daily contact with customers. As part of the company's effort to improve quality from the customer's perspective, sales company staff participate in sales company joint evaluations and take part in evaluating quality in the development stage. In addition, since fiscal 2017, C-PIUZ* activities have been conducted to obtain the candid opinions of customers regarding quality. These activities allow staff from the quality assurance and development departments to visit customers together with sales company staff. Through this activity, employees gauge customer feedback and make use of this information to improve products and services.

Additionally, Konica Minolta uses design thinking to uncover the value that customers are truly seeking. In fiscal 2018, it established processes and methods for hypothesis verification in the development stage, and to determine whether the value is actually recognized by the customer once the product is on the market. The results are applied to the development of products and services from customer perspectives.

* C-PIUZ: Customer-Problem In Using to Zero, a unique Konica Minolta initiative to reduce quality problems that occur when customers are using the product.

Promoting Service Development Using Design Thinking

Led by the Human Experience Design Center, and with cooperation from the business divisions, Konica Minolta is introducing design thinking and developing value-added services based on a customer-centric perspective, rather than a manufacturer's perspective.

Design thinking is a mindset and a method for discovering the value that customers need. It helps create ways to realize that value by applying rapid cycles of observation, empathy, issue definition, idea generation, prototyping, and verification.

Through the incorporation of design thinking, Konica Minolta is promoting service development from the customer's perspective in its B2C business areas like planetariums and in its B2B business areas such as healthcare and factory equipment maintenance. For example, the company's factory equipment maintenance service involves visiting the customer site and meeting with various stakeholders, and accompanying staff on actual equipment inspection patrols. This enables Konica Minolta representatives to experience the customer's workflow for themselves. After identifying potential issues at the site, the representatives perform a process of iterative hypothesis-making and verification. The customer is then presented with an easy-to-understand proposal for the safe equipment maintenance they need, with a focus on the experience they can expect. A new solution can also be created with the customer, one, for instance, that makes gas and heat usage easy to monitor, which may then lead to maintenance service development.

Konica Minolta will continue to pursue the creation of value that customers are truly seeking, in various business areas. It will also produce innovation that contributes to the identification and solution of challenges for society and local environments.

■ A team works to develop services using design thinking

System Built to Provide Globally Uniform Support

Many customers running global businesses centrally control at their head offices the maintenance and management of IT systems, including MFPs used in offices around the world. When requesting support from a device manufacturer, there are times when the head office, as the single point of contact, and the office actually needing support are in different regions. Accordingly, device manufacturers must also establish a global structure to provide accurate and timely support.

This is why Konica Minolta has built a new system to provide globally uniform support. Support staff assigned to sales companies worldwide have been organized and the contact point for customers has been centralized at the Global Support Center (GSC). By using purpose-built IT tools, support requests received by the GSC are shared with personnel around the world, resulting in timely and appropriate support with the dispatch of local customer engineers to handle hardware issues and specialized staff members providing remote support to solve software issues. Further, the level of service is homogenized by creating a globally shared database of inquiries and the results of responses.

CR Masters Program: A Program for Developing Personnel With Strong Customer Relations Skills

The Customer Relations Department of Konica Minolta's Business Technologies Business has established a CR Master's Program, an education and certification program that systematizes the company's unique customer relations activities with the purpose of improving the skills of personnel who promote customer relations at sales companies around the world.

Later, the sales companies that participate in this program requested that a training program be made available to all employees, not just customer relations members. Konica Minolta met these requests in fiscal 2017 by establishing Customer Relations White Belt, an e-learning program that provides an overview of the customer-centric approach and action guidelines for front-line members.

Clear and succinct training materials were prepared in both English and Japanese, and shared with all sales companies. They were well received by those companies, which have already started using them for training. Translations will be needed for several sales companies where the local language is not English or Japanese, but these materials have already received high praise from sales companies that have begun the training.

A screen from the e-learning material for the Customer Relations White Belt

Implementation of Training, Including for External Partners, to Raise Support Quality

The Business Technologies Business is determined to provide a consistently high level of service to customers everywhere in the world. To that end, it conducts various kinds of technical training on products for the Group's own customer engineers and also for external distribution partners.

In Product Service Training, trainees acquire the skills and knowledge essential for the installation, setup, maintenance, and repair of each products. The training includes two different learning methods: instructor-led training to boost practical skills and knowledge acquisition via e-learning.

Konica Minolta's own technical license certification program, Outward, is designed to keep improving the technical skills of customer engineers. This program is organized into five certification levels starting with Associate and going up through Professional, Expert, and Master to Diploma. It enables the gradual upgrading of skills, from the acquisition of the basic knowledge needed to provide support for Konica Minolta's products to the mastery of high-level specialized skills.

By making these training programs available to more and more engineers worldwide, the Konica Minolta Group will continue to fulfill customer satisfaction globally.

Promoting the Adoption of Remote Maintenance

Products provided by the Healthcare Business are used in life-threatening medical settings, so there is a need for especially rapid responses to product failures and problems. Konica Minolta has established a call center that is operating around the clock, every day of the year, to eliminate interruptions on the medical frontlines. The company established key performance indicators (KPI) focusing on reduction of customer wait time on the phone, improvement of the call center's ability to resolve problems on its own, and improving customer satisfaction. It works to provide better services in all of these areas.

As part of that effort, the call center in Japan has been actively promoting the adoption of remote maintenance for the quick resolution of problems by remotely operating products at customers' locations through the Internet. This allows problems to be fixed remotely without having to send out customer engineers, while reducing downtime for products and services and shortening diagnostic interruptions in healthcare settings.

In fiscal 2019, around 70% of the calls received by the call center were from customers using remote maintenance. As a result, downtime has been shortened by about 50,000 hours per year,^{*1} representing an approximately twofold reduction in downtime compared to fiscal 2010. The use of remote maintenance has also cut down on driving by engineers, thereby lowering gasoline consumption and CO₂ emissions.

In fiscal 2017, Konica Minolta became the first company in the Japanese healthcare industry to obtain COPC certification,^{*2} and it will continue to maintain and develop the quality of its call center by meeting the strict certification standards.

*1 Calculated based on Konica Minolta's indicators

*2 COPC certification: An international quality standard for call centers only provided to organizations with outstanding performance.

Providing Useful Products to Meet Social Needs

Universal Design

Universal Design

Pursuing product creation that includes accessibility and usability

Concept for the use of universal design

Konica Minolta creates products based on the concept of universal design. This involves accessibility, so that anyone regardless of age, gender, stature, or disability can use a product with practically the same degree of ease. It also involves usability, which means making a product as comfortable to use as possible. Universal design is particularly important for products like MFPs, which are often shared by many people working in an office. In light of this, Konica Minolta has prepared its own Universal Design Guidelines based on detailed proprietary standards, and is designing products according to these guidelines. The company also tests the products' usability by having people in wheelchairs and senior citizens use products and provide feedback. The company also conducts verification under various potential usage conditions. Konica Minolta aims to create products for which universal design is not an option but a standard specification, based on the belief that this kind of design is simply common sense and should be available to everyone.

Introduction of Color Universal Design

There is variation in the way individuals perceive colors, and many people find it difficult to see certain hues. Therefore, color universal design seeks to ensure that information is properly conveyed to all people regardless of their color perception. Starting with the color MFP bizhub C650/C550, launched in 2007, Konica Minolta has employed this concept when designing the colors of indicator lights and the colors and shapes of operation buttons. The bizhub C650/C550 has received the color universal design (CUD) certification mark from the non-profit Color Universal Design Organization (CUDO). Konica Minolta actively obtains the same certification with new MFP products.

Example 1: Initiatives for the MFP bizhub Series

bizhub C652/C552

Operation panel that can be tilted easily for greater operability

Magnified display

Start button and data light employing a blue LED that is easy to distinguish

Paper outlet colored gray to make white paper stand out, and with grooves to enable users to pick up paper with greater ease

"Free-grip" that can be grasped from above and below

Example 2: CUD Certification Obtained for Color-measuring Instruments

CUD certification^{*1} was obtained for the first time in the field of color-measuring instruments for the CM-5 spectrophotometer^{*2} and the CR-5 colorimeter^{*3} introduced in December 2009.

Both products ensure that coloration on all screens and in the design of operation panel switches is easy to discern for users of all color perception types. They also ensure ease of operation for diverse users by employing variations in shape, line type, and tone differentiation pattern, and display color descriptors such as “vivid” and “dull” to help users better envision the color scheme.

These new products have made it possible to perform measurements at an array of development and production sites—such as for foodstuffs, medical supplies, and cosmetics—which require careful color management or analysis, without being limited by individual differences in color perception.

*1 CUD certification: Certification by the NPO Color Universal Design Organization (CUDO)

*2 Spectrophotometer: Instruments that measure color at high precision levels by means of multiple sensors for each wavelength

*3 Colorimeter: Instruments that quickly measure color via red, green, and blue sensors using a function similar to that of the human eye

CM-5 Spectrophotometer

Security Functions for MFPs

Offering document security management as a standard feature

Document Security Solutions

In recent years, there have been growing problems relating to information security, including computer hacking, viruses, and information leaks. Even for MFPs, which are evolving into network information stations, the need for document security is greater than ever before. In response to these social needs, Konica Minolta has developed various security solutions for its products. In order to give customers a strong sense of security, the following are all standard features in MFPs.

User Authentication

This function can restrict access for individual users.

Department Management

In conjunction with user authentication, this function enables sophisticated user access and cost control.

Network Security

The network security system supports the following functions: IP filtering to prevent unauthorized access from unknown computers or devices; IPsec to prevent the eavesdropping of network data; Secure Sockets Layer (SSL); and, in the latest models, IEEE802.1X.

Memory Erase

This function can completely erase document information from the hard drive after printing and before disposing of a hard drive.

Box Security

In addition to the user authentication and department management functions, customer document information can be protected using a box password or confidential document password.

PDF Encryption

This function enables PDF documents to be created, encrypted, and sent out via email. Information saved on the hard drive can also be encrypted.

Ensuring the Reliability of Security Features

Konica Minolta began to obtain ISO 15408 certification for its MFPs early on. This certification is the international standard for ensuring the reliability of security features. Since the launch of the color MFP bizhub 7145 in December 2002, almost every subsequent model has obtained the certification.

Security Solutions

Biometric Security Solutions

Reliable and quick security management using finger vein authentication

The AU-101/AU-102 Biometric Authentication Unit is included as an option in Konica Minolta MFPs and printers. This biometric finger vein reader allows highly secure, simple, and immediate user access. When combined with the standard features of user ID and password authentication, this function realizes even more sophisticated security management. The Biometric Authentication Unit can authenticate users simply by scanning a finger. As users are identified by vein pattern, an individual characteristic that is difficult to forge, user access management can be extremely reliable. Furthermore, since printer output can be initiated by placing a finger on the authentication pad, unauthorized people are prevented from seeing or accidentally taking confidential printouts.

AU-102 Biometric Authentication Unit

Basic Concept

Konica Minolta is committed to fulfilling its social responsibility not only in terms of its own products but also throughout the supply chain,* based on relationships of trust with suppliers.

Konica Minolta creates innovative products and services that contribute to society and pursues customer satisfaction under its management philosophy of “The Creation of New Value.”

Konica Minolta views the suppliers that provide and produce raw materials and parts, carry out distribution, and offer services as essential partners in its business activities. The Group strives to build strong partnerships with these business partners, based on fair and transparent transactions, with a commitment to the shared goal of providing innovative products and services in a timely manner to customers all over the world.

As a global company striving to get a trust from worldwide society, Konica Minolta pursues its CSR procurement with consideration for labor issues (human rights), ethics, the environment, safety and health throughout the supply chain, including at its suppliers.

Additionally, the Group is taking steps to address conflict mineral issues, seeking to prevent violations of human rights in conflict areas from which mineral resources used in products are sourced.

* Supply chain: The series of activities involved in delivering a product or service to a customer, ranging from procurement and production to distribution and sales.

Konica Minolta's Approach

Background and Issues

The Konica Minolta Group recognizes that, around the world, many people are forced to work without respect to their rights or in deplorable conditions, and that children and foreigners (migrants) are particularly vulnerable. The Group also understands that companies must fulfill their social responsibilities, including making improvements in the areas of labor issues (human rights), ethics, the environment, and health and safety, not only related to their own products, but also along the entire supply chain involved in delivering these products to customers.

* Supply chain: The series of activities involved in delivering a product or service to a customer, ranging from procurement and production to distribution and sales.

Vision

Konica Minolta aims to contribute to building a sustainable society that takes social issues such as human rights into consideration. To achieve this goal, we are working together with our clients along the entire supply chain to help solve these social issues. Through such initiatives, the business value of both Konica Minolta and our clients is improved, and by providing products that our customers can feel comfortable purchasing, we can 'create shared value'.

Key Measures and KPIs

CSR procurement (FY2020 to FY2022)

- CSR activity participation requests to suppliers: 100% implementation
- CSR assessments: Completion at Group production sites and at approximately 100 important suppliers' sites
- CSR RBA VAP audits: Completion at important Group production sites, and at five particularly important suppliers' sites

Addressing the issue of conflict minerals (FY2020 to FY2022)

- Response rate from suppliers regarding the conflict minerals survey: Maintaining over 90%
- Response to customer survey requests: 100% fulfill

▼ Structure for Promoting CSR Procurement

Supply Chain Management

Working to establish a sustainable society in which human rights are respected

As a global company, Konica Minolta operates in 50 countries around the world. The total value of the Group's procurement is approximately 530 billion yen. By region, Japan accounts for 36% of this, China, for 26%, Europe for 14%, the United States for 13%, and ASEAN and other regions for 11%.

Konica Minolta carries out production activities utilizing its high-quality manufacturing skills as a manufacturer, with production sites primarily in Japan, China and the ASEAN region. The Konica Minolta Group divides procurement into the goods used directly in production and the goods and services needed indirectly for production, company operation, business activities, and development. It treats these as direct materials procurement and indirect materials procurement, respectively.

In direct materials procurement, distribution costs and environmental impact can be reduced by procuring parts and raw materials needed in production from regions close to the production site. Accordingly, the Group's basic policy is to practice regional procurement, procuring close to the production site those materials that can be acquired locally. At the same time, it strategically employs global procurement, selecting optimal procurement sources worldwide, such as for materials that have cost savings when purchased in bulk and high-value added parts that require a high level of technical competence. In such cases, procurement departments in Japan conduct centralized procurement.

Due to large-scale chemical explosions and the tightening of environmental regulations in China in recent years, operations have been temporarily suspended at certain industrial parks within the country. This caused a halt to the supply of some raw materials to Konica Minolta, resulting in a temporary situation in which the stock of raw materials was running low in production. In order to ensure that such a situation causes no delay in the supply of products to its customers, Konica Minolta is working to trace the supply of routes of raw materials back to the crude raw materials, and to seek out suppliers outside of China, secure multiple suppliers, and consider alternative materials for high-risk raw materials.

Regarding indirect materials procurement, efficient procurement is pursued through a combination of expense items to procure at sites in each country and procurement optimized worldwide through global contracts.

In Konica Minolta's primary field, the Office Business, service-related costs are incurred due to work required for equipment maintenance after sale. Service-related costs have also increased due to the expansion of the IT solutions the Group provides as the Group shifts to a business model based on the sale of services rather than the sale of products.

Konica Minolta is shifting from procurement in China to procurement in the ASEAN region, particularly Malaysia, in line with its digital manufacturing approach, which employs manufacturing system that do not overly rely on certain "people, places, countries, or trends."

Fiscal 2019 Procurement amount, by region
(Based on monetary amount of procurement)

Fiscal 2019 Procurement classification analysis
(Based on monetary amount of procurement)

Konica Minolta views all of the suppliers that supply and produce materials such as raw materials and parts or provide logistics and other services as indispensable partners in its business activities.

Konica Minolta is working with suppliers to build a trusting relationship through transparent and equitable transactions in order to achieve the shared goal of providing innovative products and services in a timely manner to customers all over the world.

Konica Minolta recognizes that there are workers all over the world who are forced to work with no consideration of their rights or who have to work in deplorable circumstances, and child and foreign (migrant) workers are particularly susceptible to these negative circumstances.

Konica Minolta promotes CSR procurement throughout its supply chain,* helping to create sustainable societies. The company believes that enterprises are not only responsible for their products, but also socially responsible to improve conditions of labor (human rights), ethics, the environment, safety and health, throughout the supply chain that delivers products to customers. Konica Minolta practices CSR procurement in order to realize these improvements at its manufacturing bases, and works closely with the suppliers who supply raw materials and parts for its products.

In order to fulfill social expectations such as respect for human rights, Konica Minolta not only addresses this issue at Group production sites but also cooperates with manufacturing and logistics suppliers. It also believes this improves the corporate value of both Konica Minolta and its suppliers. Further, this cooperation enables the customers to purchase the company's products with peace of mind and to know that, by doing so, they are contributing to the development of a sustainable society. Konica Minolta recognizes that CSR procurement is more than just the social responsibility of a global company; it is also convinced that improving working conditions make employee satisfaction higher and attrition rates lower. This in turn reduces business risk and raises quality throughout the supply chain. There are plentiful reasons for the proactive approach.

* Supply chain: The series of activities involved in delivering a product or service to a customer, ranging from procurement and production to distribution and sales.

Konica Minolta's CSR Activities in the Supply Chain

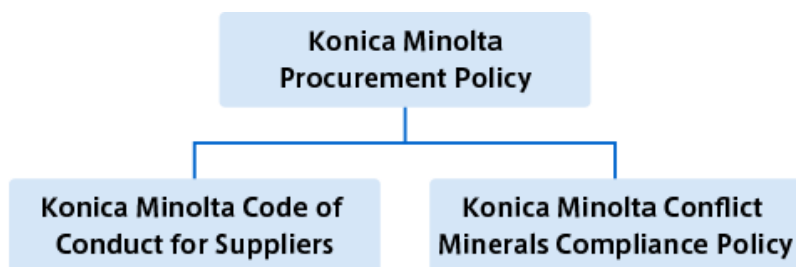

Policies on Procurement

Establishing supply chain policies and continuously pursuing improvements

In fiscal 2008, the Konica Minolta Group established the Konica Minolta Procurement Policy as a policy covering procurement activities overall in order to promote initiatives related to fair procurement. The basic stance of the policy is based on the key words, "open," "fair," "global," "compliance," and "ecology." The policy also clarifies requests to suppliers.

Building on this policy, the Group established the Konica Minolta Code of Conduct for Suppliers based on the exact text of the RBA* Code of Conduct when Konica Minolta joined the RBA in fiscal 2013. With this code, Konica Minolta asks for the compliance of suppliers in its supply chain to help create a sustainable society by ensuring continuous improvement in various areas. These areas include labor rights (forced labor, child labor, freedom of association, etc.), ethics (intellectual property, privacy, anti-corruption, etc.), the environment (energy use, impacts of climate change including CO2 and greenhouse gas emissions, water use, pollution, waste, resource use, etc.), and health and safety (emergency preparation, occupational accidents, occupational health, etc.). In addition, in fiscal 2014, the Group established the Konica Minolta Conflict Minerals Compliance Policy, based on which it is taking steps to address conflict mineral issues. The basic contract with suppliers includes "compliance with the Konica Minolta Code of Conduct for Suppliers," and the Group requests suppliers to comply with this Code.

* Responsible Business Alliance (RBA): An organization that promotes CSR in the supply chain.

Konica Minolta Procurement Policy

The Konica Minolta Group pursues customer satisfaction by creating innovative products and services that contribute to the development of society, according to our management philosophy, "The Creation of New Value." In procurement activities, we establish firm partnerships with our suppliers based on fairness and transparency, and aim to build a sustainable society by fulfilling social responsibilities with our suppliers.

1. OPEN

We will build transparent and reliable relationships with our suppliers and manage procurement in an open manner, while sharing objectives from a long-term and global perspective.

2. FAIR

We will carry out transactions under the principle of free competition with rational evaluation criteria, and seek mutual benefit with suppliers.

3. GLOBAL

We will have a global outlook and carry out procurement in the regions that best suit our operational needs.

4. COMPLIANCE

We will comply with all relevant laws and regulations, corporate ethics, and internal policies and regulations.

5. ECOLOGY

We will contribute to the international society and local communities by striving to take the lead in environmental protection, while reducing the impact of our operations on ecosystems.

Request to Suppliers

Based on strong partnerships with our suppliers, we ask our suppliers to focus on the following areas in order to increase customer satisfaction and fulfill social responsibilities.

1. Excellent quality

Ensuring the safety of products and services, including compliance with the safety standards of each country and region, and improving quality to meet the demands of customers

2. Reasonable prices

Pursuing prices with market competitiveness

3. Response to changes in demand

Developing a stable supply system that can respond flexibly to changes in demand

4. Compliance with laws, regulations, and corporate ethics

Complying with all laws and regulations of each country and region, and with corporate ethics

5. Environmental protection

Undertaking environmentally conscious business activities and material procurement

6. Respect for the human rights of workers

Respecting basic human rights, including the prohibition of child labor, forced labor, and discrimination based on ethnicity, gender, and any other grounds

7. Health and safety

Providing safe and clean work environments

8. Information security

Continuously improving information security

9. Firm management foundation

Building a firm management foundation to ensure a continuous and stable supply of materials

Structure for Promoting CSR Procurement

Establishing a structure for promoting CSR procurement throughout the supply chain

Konica Minolta has established a group-wide structure for promoting CSR procurement and addressing conflict mineral issues in order to fulfill its social responsibility across the entire supply chain.

Konica Minolta's CSR procurement promotion structure is incorporated into its environmental management system, and they are both run by an executive officer. Under this structure, Konica Minolta reviews group-wide progress related to CSR procurement and conflict mineral issues and agrees on targets and action plans.

Cooperating with External Organizations

UN Global Compact

In 2009, Konica Minolta signed the Global Compact, which consists of 10 principles, related to human rights, labor, the environment, and anti-corruption, advocated by the United Nations.

The Global Compact is a set of voluntary action principles for businesses proposed in 1999 by then UN Secretary-General Kofi Annan and officially established at the United Nations Headquarters in 2000. It is an initiative to achieve sustainable growth on a global scale by encouraging businesses to act as upstanding members of the international community by demonstrating responsible, creative leadership in solving various worldwide problems, including global warming, environmental problems, and economical stratification in society.

Konica Minolta participates in various working groups of the Global Compact Network Japan, and it makes use of these experiences in its CSR procurement initiatives.

Responsible Business Alliance (RBA)

Konica Minolta joined the RBA in October 2013 and has been acting as a member to strengthen its CSR procurement in the supply chain.

The RBA, which is made up of more than 150 companies, including the world's leading electronics manufacturers and their major suppliers, works to improve worker rights (human rights and working conditions), ethics, health, and safety in the supply chain.

Konica Minolta's CSR Procurement Initiatives

Working to improve labor conditions (human rights), ethics, the environment, and safety and health in the supply chain

Companies have to take social responsibility not only for their own products but also for improving labor conditions (human rights), ethics, the environment and health and safety in the supply chain used to deliver products to customers. In line with this recognition, Konica Minolta promotes CSR procurement that pursues these kinds of improvements together with its business partners who supply and produce materials such as raw materials, parts and components, as well as Group production sites, with the aim of establishing a sustainable society in which human rights are respected.

Laws such as the California Transparency in Supply Chains Act and the UK Modern Slavery Act 2015 have been enacted in recent years. More than ever, companies' human rights initiatives must also address the issues of slavery and human trafficking. In response to social demands like these, the RBA*2 has been updating its code of conduct and various systems. As an RBA member, Konica Minolta will make use of the RBA's framework to address these social issues.

Before starting a partner relationship with Konica Minolta, a prospective supplier must complete a questionnaire on labor rights, the environment, ethics, and health and safety, based on the Konica Minolta Code of Conduct for Suppliers, and undergo an on-site inspection by Konica Minolta employees.

*1 Supply chain: The series of activities involved in delivering a product or service to a customer, ranging from procurement and production to distribution and sales.

*2 Responsible Business Alliance (RBA): Organization that promotes CSR in the supply chain

Konica Minolta's CSR Procurement Promotion Program

Konica Minolta strives to ensure socially responsible procurement by requesting suppliers to participate in CSR activities, assessments, and audits, and thus helping them to improve.

Konica Minolta has implemented a four step CSR procurement promotion program to address any issues related to labor conditions (human rights), ethics, the environment and health and safety in its supply chain.

First, suppliers are requested to carry out CSR activities based on clearly articulated standards to be maintained in line with Konica Minolta's procurement policies and Supplier Code of Conduct. Suppliers from which the Group makes purchases directly are asked to acknowledge and implement the Code to their upstream suppliers.

About 100 suppliers identified to be particularly important to Konica Minolta's business in terms of transaction volume or the irreplaceability or importance of the parts they handle are requested to use the Responsible Business Alliance's Self-Assessment Questionnaire (RBA SAQ) to carry out a CSR assessment that confirms their level of implementation of the Konica Minolta Supplier Code of Conduct. Where assessment results do not meet targets, Konica Minolta requests suppliers to implement corrective actions.

Further, the Group conducts CSR audits on suppliers that are especially important for its business and on suppliers that did not achieve targets despite making improvements. CSR audits are carried out primarily in the style of Konica Minolta CSR Audits*1, with an RBA third-party audit (VAP audit*2) conducted in case as appropriate.

Konica Minolta provides support to help suppliers improve any issues that come to light through the CSR assessments and CSR audits. The aim of Konica Minolta's CSR procurement promotion program is ultimately to empower its suppliers to implement self-directed CSR activities.

Finally, the Group sometimes considers ending business with suppliers that do not make any improvement at all despite the support provided.

*1 Konica Minolta CSR Audit: Konica Minolta auditors who have RBA qualifications implement an audit based on RBA Audit standards.

*2 RBA third-party audit (Validated Audit Program [VAP] audit): An audit conducted by a third-party auditing organization certified by the RBA to confirm the status of compliance with the RBA Code of Conduct based on audit standards, identify points for improvement, and encourage correction. As a third-party CSR audit, the RBA VAP audit is one of the most trusted in the world.

› [Konica Minolta Supplier Code of Conduct](#) 

Konica Minolta uses the RBA Code of Conduct as the Konica Minolta Supplier Code of Conduct, which it provides in Japanese, English, and Chinese. See the RBA Code of Conduct for other languages.

Requesting CSR Activity to Suppliers

Suppliers worldwide are sent copies of Konica Minolta's procurement policies and the Konica Minolta Supplier Code of Conduct and asked to comply with them. The aim is to get suppliers to understand and promote the CSR procurement policies and standards required by Konica Minolta.

From fiscal 2017 to fiscal 2019, while requesting suppliers to undertake CSR activities, Konica Minolta also confirmed their cooperation with the policies and standards by written consent. The response rate was 98%.

CSR Assessments Using a Self-Assessment Questionnaire

CSR assessments using a Self-Assessment Questionnaire are conducted at production sites and important suppliers, in order to assess the level of implementation of the Konica Minolta Supplier Code of Conduct.

Konica Minolta has conducted CSR assessments using the self-assessment questionnaire based on the RBA framework since fiscal 2009. The CSR assessment evaluates site initiatives to address social issues such as labor (human rights) protection, ethics, and health and safety, as well as environmental issues such as minimizing environmental impact. Konica Minolta classifies the results of the self-assessment questionnaire from rank A to C. The targets for overall scores are rank A for all Group production sites and rank B or higher for all suppliers. Rank C suppliers are considered to be high-risk, and CSR audits are conducted for those suppliers that have not achieved their targets even after implementing improvements.

In fiscal 2019, two Group production sites and 44 suppliers implemented the assessment, with all production sites achieving rank A and all suppliers achieving rank B or higher on their overall score. There were no high-risk rank C suppliers. These assessment results met the target, but suppliers whose scores for specific components such as labor issues (human rights), ethics, environment, or health and safety revealed weaknesses were asked to make voluntary improvements. It is also notable that there was a trend toward relatively low scores in the area of ethics and the environment.

Konica Minolta has been promoting improvement to the audit findings in its major production sites since 2014, by implementing RBA third party audit (VAP audit) at first. Based on this knowledge, Konica Minolta CSR Audits^{*1} have been introduced at the companies who produce the main units for multi-functional peripherals (MFPs)/printing equipment. In fiscal 2017, the audit target was expanded to include not only the company manufacturing the main unit of the MFPs, but also materials for MFPs, including the company that produces consumables such as toner cartridges, etc., and a CSR audit was conducted. Bases for the final production in Konica Minolta's mainstay business, the Office Business, are mainly located in Japan, China, and ASEAN. Konica Minolta places great importance on audits at those bases in order to practice high-quality craftsmanship as a manufacturer and to carry out CSR-oriented production activities. The implementation rate of RBA third party audits (VAP audits) and Konica Minolta CSR Audits up to fiscal 2019 is 71%. These CSR audits uncovered several issues, such as management of total working hours, implementing training in areas such as labor and ethics, and the construction of an internal auditing system. To solve these issues, the audited company created and implemented an improvement plan, and a follow-up audit showed that the improvements have been completed. The non-conformance rate in RBA third party audits (VAP audits) and Konica Minolta CSR Audits was 7%, and there were no priority non-conformance points at the completion of the follow-up audits. The completion rate for correction of other non-conformities was 50%. Konica Minolta sites will continue to improve conformity through the use of plan-do-check-act (PDCA) cycles.

*1 Konica Minolta CSR Audits are performed by Konica Minolta auditors with RBA qualifications, using RBA auditing standards.

At Konica Minolta Business Technologies (WUXI) Co., Ltd., located in China, an RBA third-party audit (VAP audit) was conducted in fiscal 2014 and made corrective actions. In fiscal 2017, the new internal audit system was used to conduct a self-evaluation and make improvements on problem areas such as labor, safety and health. The internal audit system will remain in use in the future to make continued improvements.

Konica Minolta Business Technologies (Dongguan) Co., Ltd. in China, and Konica Minolta Business Technologies (Malaysia) Sdn. Bhd. have already completed Konica Minolta CSR audits. In order to improve issues identified in their audits of fiscal 2016, the two companies established internal audit systems and implemented training about RBA audit standards and CSR issues to their internal auditors. This led to the establishment of systems that enable continuous improvement. The two sites are also continuing to work on improvements concerning some of their remaining labor issues.

In fiscal 2017, a Konica Minolta CSR Audit was conducted to Konica Minolta Supplies Manufacturing Co., Ltd. and Konica Minolta Supplies Manufacturing France S.A.S. Although the audit showed the commonly observed issue of a need to set up an internal audit system, there were no particular issues uncovered regarding immigrant labor and child labor based on the RBA standards (A1.4 and A2.1). A follow-up audit was conducted at Konica Minolta Supplies Manufacturing in fiscal 2018, and it confirmed that improvements to the labor(human rights) and management system had been completed. Konica Minolta also confirmed that the management system had been improved at Konica Minolta Supplies Manufacturing France.

Allied Precision Manufacturing in Malaysia implemented a Konica Minolta CSR audit in fiscal 2015, and took corrective actions with Konica Minolta's support. A follow-up audit was implemented in fiscal 2016, confirming that improvements to ethics, environment, and management systems had been completed. The company is still working on improving certain issues.

In addition, a Konica Minolta CSR audit was done in fiscal 2016 at Dong Guan Konka Mould Plastic Co., Ltd. in China, and corrective actions were taken with Konica Minolta's support. A follow-up audit was implemented, confirming that improvements to the environmental issues had been completed. The company is still working on improving certain issues.

A Konica Minolta CSR Audit was also conducted at the factory which produces office equipment product on a consignment basis in China. The consigned production factory has incorporated a management system based on the RBA Code in the areas of labor, ethics, environment, safety and health, and confirmed that there is a firm framework in place for making continued improvements.

In fiscal 2019, a new Konica Minolta CSR Audit was conducted at the factory that produces Office equipment products on a consignment basis in China, and improvement efforts were implemented with the support of Konica Minolta. A follow-up audit confirmed that improvements to some of the labor issues and the management system had been completed. The company is still working on improving certain issues.

Konica Minolta CSR Audit at Konica Minolta Supplies Manufacturing France S.A.S.

Support and Incentives for Suppliers

Aiming to encourage suppliers to engage in self-directed CSR activities, Konica Minolta explains to suppliers the social expectation for CSR procurement, including customer demands, and provides education related to RBA audit standards required in CSR audits. Also, based on audit results the Group provides suppliers with support for improvements that make use of Konica Minolta's knowledge.

In fiscal 2017, a Chinese manufacturer, Dong Guan Konka Mould Plastic Co., Ltd., which implemented a Konica Minolta CSR Audit in fiscal 2016. was given support to conduct its own internal audit the following year, including education to their internal auditors. This support is helping the company to establish a framework for its own continuous improvement.

Training for Relevant Personnel at Konica Minolta

In order to succeed with CSR procurement, the Konica Minolta Group must ensure that relevant personnel understand its CSR procurement objectives and tools for implementation. Every year, training is conducted on the importance of helping to create a sustainable society by promoting CSR procurement. Other topics include social trends related to CSR, trends in laws and regulations worldwide, and the need for internal CSR procurement initiatives. Training is provided to about 80 people each year, including members of the human resources, procurement (buyers), and environmental affairs departments in Konica Minolta, Inc. and its production sites.

Konica Minolta's Initiatives Regarding the Issue of Conflict Minerals

As a global company with a supply chain stretching around the world, Konica Minolta addresses the issue of conflict minerals in order to prevent human rights violations associated with conflict.

It has been pointed out that the mining of the mineral resources for tungsten, columbite-tantalite, gold, and cassiterite in the Democratic Republic of the Congo or adjoining countries can end up fueling conflict.

Seeking to prevent conflict-related violations of human rights such as child and forced labor, the Organization for Economic Co-operation and Development (OECD) established Due Diligence Guidance for Responsible Supply Chains of Minerals from Conflict-Affected and High-Risk Areas^{*1} and requires that companies take responsible initiatives in the supply chain. Additionally, Section 1502 of the Dodd-Frank Wall Street Reform and Consumer Protection Act, which was passed in 2010 in the United States, requires companies listed on a U.S. stock exchange to disclose information about conflict minerals^{*2} derived from regions of conflict. Corporate organizations also pursue initiatives addressing conflict minerals, including the Responsible Minerals Initiative (RMI)^{*3}, which has a global reach, and in Japan the Responsible Minerals Trade Working Group, established as part of the Japan Electronics and Information Technology Industries Association (JEITA)^{*4}.

*1 A measure for identifying and assessing the risk of infringement of human rights based on fact-finding surveys in the supply chain for minerals, and preventing or mitigating adverse effects

*2 Conflict minerals: Cassiterite (tin), coltan (columbite-tantalite), gold, wolframite (tungsten), or their derivatives; also known as 3TG.

*3 Responsible Minerals Initiative (RMI): An organization that spearheads initiatives addressing conflict minerals to which over 300 companies and organizations around the world belong.

*4 Japan Electronics and Information Technology Industries Association (JEITA): An organization to which about 400 companies and organizations belong, primarily in Japan's IT and electronics field.

▶ [Konica Minolta Conflict Minerals Policy Statement](#) 

Framework for Initiatives

Konica Minolta carries out initiatives addressing conflict minerals in line with the Five-Step Framework for Risk-Based Due Diligence in the Mineral Supply Chain in the OECD Guidance.

Step 1. Establish strong company management systems

Konica Minolta has established the Konica Minolta Conflict Mineral Policy Statement, which addresses the prevention of human rights violations caused by conflicts. This statement requires that suppliers are familiar with Konica Minolta policies on conflict minerals and that conflict mineral policies are incorporated into contracts with business partners.

Konica Minolta's conflict mineral programs are incorporated into its sustainability promotion system, which is led by an executive officer. In addition, a mechanism for implementing conflict mineral surveys, including production sites in Japan and overseas, has been prepared to identify the smelters or refiners (SORs) in the supply chain. The management and staff in the procurement divisions in charge of procurement are given training to enhance their understanding of conflict mineral initiatives and motivate them.

Step 2. Identify and assess risk in the supply chain

Using the Conflict Minerals Reporting Template (CMRT) and Cobalt Reporting Template (CRT) issued by RMI, Konica Minolta implements surveys of conflict mineral and cobalt. The survey confirms the content of 3TG and cobalt, surveys the country of origin, identifies the SORs in the company's supply chain, and confirms the business partners' due diligence. Based on the results of the survey and information about the identified SORs in the supply chain, Konica Minolta assesses the risk to the supply chain overall, by each business partner, and by each product. These results are reported to the executive officer in charge.

Step 3. Design and implement a strategy to respond to identified risks

Based on the results of the risk assessment, Konica Minolta requests all suppliers to take any needed steps to ensure that their business is not in any way complicit in the funding of conflict forces. Konica Minolta conveys any customer concerns to suppliers using smelters and refiners that customers have expressed concerns about, and asks that they respond appropriately, such as reassessing the SOR in question. Indirect efforts are also made to eliminate the risk of conflict complicity, such as activities building awareness about the issue of conflict minerals.

Step 4. Carry out independent third-party due diligence audits for SORs

Konica Minolta is a member of RMI, which operates an audit program (the Responsible Minerals Assurance Process [RMAP]) certifying that SORs are conflict-free.* In addition, through JEITA activities, SORs are encouraged to participate in RMAP.

*SORs that conform to the Responsible Minerals Assurance Process managed by RMI.

Step 5. Report annually on supply chain due diligence

Konica Minolta's conflict mineral initiatives are disclosed every year on its website and in its CSR report.

Cooperating with External Organizations

Konica Minolta promotes programs addressing conflict minerals in cooperation with external organizations.

Konica Minolta is a member of RMI, which leads global initiatives on conflict mineral issues. RMI's Conflict Minerals Reporting Template is adopted worldwide. RMI also operates a program that certifies which SORs are conflict-free, and it operates other activities designed to promote a responsible supply chain for mineral procurement.

In Japan, Konica Minolta participates in JEITA's Responsible Minerals Trade Working Group. This working group promotes programs addressing conflict mineral issues among IT and electronics companies in Japan.

Targets and Results

The Konica Minolta Group responded to requests about conflict minerals from customers across all of its businesses, and also continued to conduct a voluntary conflict minerals and cobalt survey in its core Office Business and its Professional Print Business. The Group assess risk and encourages conflict-free suppliers.

Fiscal 2019 Targets	Fiscal 2019 Results
<ul style="list-style-type: none"> Response rate from suppliers regarding the conflict minerals survey: Sustained at over 95% Response from customers to survey requests (KPI) 100% response rate 	<ul style="list-style-type: none"> Response rate from suppliers: 95% Response rate from all customers to survey requests: 100%

Response to Customers' Request for Survey

In fiscal 2019, many customers in the Business Technologies Business, Professional Print Business, Healthcare Business and Industrial Business requested conflict mineral surveys. Konica Minolta responded to all customers by submitting completed conflict mineral survey reports. Inquiries about conflict minerals other than surveys were responded to appropriately, based on survey results and the company's own initiatives. Konica Minolta started surveys of cobalt responding to requests from customers in fiscal 2018.

Office Business and Professional Print Business Conflict Minerals Survey

In the core Office Business and the Professional Print Business, annual conflict mineral surveys have been planned and implemented since fiscal 2013, cobalt surveys since fiscal 2019. These surveys were also done in fiscal 2019, and 95% of suppliers within the scope responded. In addition, when carrying out the survey, suppliers were requested to reduce smelters unknown to ensure transparency in their supply chain and ensure their products are conflict-free.

The conflict mineral survey confirmed that 296 SORs in the supply chain are recognized by RMI. Of these, 232 were certified as being RMAP-compliant SORs. Also, 87 countries were identified to be sourcing 3TG in the supply chain (as of March 31, 2020).

- › [List of smelters / refiners](#) 
- › [List of country of production](#) 

In addition, toner, one of Konica Minolta's major products, was confirmed to be conflict-free. Some other products and materials were confirmed to be conflict free because they are made from recycled materials. No evidence of conflict complicity was found in the supply chain surveyed.

Other Initiatives

The conflict mineral survey was also done in the Healthcare Business and the Industrial Business, not only the Office Business and the Professional Print Business. As a result, Konica Minolta was able to confirm that some products in the optical lens and functional film categories are entirely conflict-free.

Konica Minolta cooperates with external organizations, including participating in an initiative where members of JEITA's Responsible Minerals Trade Working Group encourage SORs to be involved in a conflict-free audit program. In addition, Konica Minolta provided an instructor for the JEITA Conflict Mineral Survey Briefing, held by JEITA on June 14, 2019. Konica Minolta also participates in the Conflict Free Sourcing Working Group (CFS-WG), established jointly by JEITA and automotive companies, in programs that go beyond industry boundaries.

Procurement Initiatives

- ▼ Procurement Collaboration System
 - ▼ Environmental Collaboration Aimed at Strengthening the Management of Chemical Substances Included in the Supply Chain

-

Procurement Collaboration System

Promoting procurement collaboration to increase customer satisfaction

Seeking to increase customer satisfaction, the Business Technologies Business promotes a Procurement Collaboration System in which suppliers and Konica Minolta work together in pursuit of improvements. In this initiative, the Group shares challenges through dialogue with and visits to suppliers, makes proposals needed for their resolution, and provides concrete support aimed at comprehensive improvements in terms of quality, delivery, productivity, the environment, and business management. Suppliers also point out issues to Konica Minolta, which serves to improve problems in business transactions.

Environmental Collaboration Aimed at Strengthening the Management of Chemical Substances Included in the Supply Chain

Konica Minolta has implemented environmental collaboration with suppliers to reduce environmental risk as a procurement collaboration system in the area of the environment. This initiative creates solid partnerships through on-site assessments and educational support for suppliers in order to strengthen management of chemical substances included in the supply chain.

In fiscal 2019, Konica Minolta went directly to the manufacturing sites of 40 suppliers in and outside Japan and conducted on-site assessments, working with suppliers to strengthen the chemical substances management system. In addition, the company started confirming activities in areas such as labor, health and safety, the environment, and ethics at its suppliers' manufacturing sites.

In addition, Konica Minolta has established an educational system focused on laws and regulations as well as on-site management that it uses to train suppliers' internal assessors in an effort to support the independent management of chemical substances on the part of suppliers. Education on changing trends and Konica Minolta's initiatives was added to CSR procurement initiatives starting in fiscal 2018. In fiscal 2019, Konica Minolta held training sessions using e-learning, training more than 240 internal assessors from 128 companies, and conducted approximately 150 internal assessments.

Holding Suppliers' Meetings

Konica Minolta holds annual suppliers' meetings as part of its procurement collaboration system. Since fiscal 2015, accompanying the growing number of suppliers in the ASEAN region, the Group has held suppliers' meetings in Malaysia, in addition to the meetings in China already held regularly.

At a meeting held in fiscal 2018, the Group explained the Konica Minolta Procurement Policy, reported procurement results and the procurement plan for the next fiscal year, and shared goals and challenges. Over 350 attendees from 180 suppliers participated in the meeting, which was a meaningful opportunity for communication..

Suppliers' meeting in China

Commendation of Suppliers

Konica Minolta takes the opportunity of the suppliers' meeting to commend suppliers. The purpose of commending suppliers with excellent records in terms of quality, delivery, productivity, and the environment is to encourage all suppliers to undertake further improvement initiatives.

Human Capital

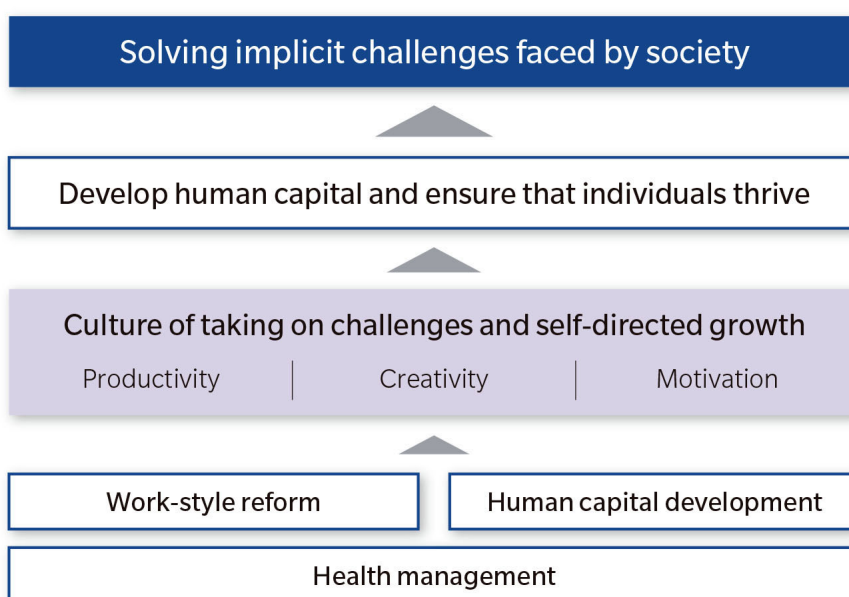

Basic Concept

Developing Human Capital to Drive Value Creation

Konica Minolta is transforming into a digital company with insight into implicit challenges, which is to say that it uses digital technology to identify and solve implicit challenges faced by customers, recognizing this as key to achieving sustainable growth. In so doing, Konica Minolta provides value to the professionals who work for its corporate customers, which it believes will lead to solutions to challenges that people and society face. This is why Konica Minolta is working to strengthen the abilities of its employees, ensuring that individuals thrive. The Group is working to enhance every members productivity and creativity and to create environments where everyone stays motivated to grow.

Konica Minolta recognizes that good physical and mental health is critical to employees' efforts to maximize their potential. Accordingly, the Group implements a strong health management program and is pursuing work-style reform and human resource management in order to support employees' efforts to create customer value and accelerate self-directed growth. By rolling out these initiatives globally, the Group seeks to maximize the potential of all of its professionals and enhance their capacity to create value.

Konica Minolta's Approach

Background and Issues

Konica Minolta recognizes that it must utilize the full potential of its employees to achieve its goal of transforming itself into a digital company with insight into implicit challenges. Konica Minolta understands the need for work-style reform that allows all employees to demonstrate their full potential.

Vision

Konica Minolta is moving forward with work-style reforms in many areas, including operational processes, human capital utilization, roles and authority, systems, and environmental measures. In so doing, the company is seeking to improve the job satisfaction of every employee as well as overall productivity. In a business environment where unprecedented changes continue to occur, Konica Minolta will continue to promote the creativity and innovation that is the source of competitiveness.

Key Measures

- Preparing operational and workplace environments
- Reforming operational processes
- Making the most of diverse talent

Expanding the System for Creating Innovation

Permitting Employees to Pursue a Second Job or Work Concurrently, and the Introduction of a Job Return System

In December 2017, Konica Minolta, Inc. implemented a program that permits employees to take on a second job or work concurrently to promote innovation. At the same time, the company also introduced a Job Return System to increase employee diversity. The first measure helps to meet the needs of employees who want to start their own businesses while still working at Konica Minolta, and those who want to enhance their skills in areas such as IT and programming. This program is expected to become a starting point for creating innovation, by making full use of employee knowledge and skills that can be gained through work experience outside the company. The Job Return System provides opportunities for reinstatement to employees who have left the company due to personal circumstances such as child rearing or nursing care of a family member, or those who leave in order to study abroad or change occupations with the goal of career advancement. In addition to utilizing the knowledge and experience cultivated by such employees before leaving the company, Konica Minolta expects to also make full use of the knowledge, personal contacts and experience gained by such employees during their time away.

Expanding the Remote Work System

Konica Minolta is working diligently to reform work styles. One key element of this effort is enabling employees to work without being tied to a single location. In April 2017, Konica Minolta, Inc. launched a remote work system for all employees. The system allows employees to work at home and other places away from the office, enabling them to shorten their commute and other travel time and to work in a variety of different ways. The remote work system is also being expanded at its sales companies in and outside of Japan.

Since remote work does not tie employees to a particular workplace, it can help them be more systematic about their work and concentrate on output. This work style generally raises hourly productivity. Additionally, moving across workplaces and environments exposes employees to diverse ideas, creates time to concentrate, and helps to spur creativity. By improving the efficiency of operations through the introduction of RPA,* and by improving operational processes, the company is contributing to the promotion of remote work through greater computerization of operations.

* RPA(Robotic Process Automation): Automating routine business process on a personal computer

Expanding the System for Work-Life Balance

Finding ways to help employees balance work and childcare responsibilities

As part of its support for employees' work-life balance, Konica Minolta, Inc. strives to provide an environment in which employees can focus on work and perform to the best of their abilities with peace of mind, even while raising children. In recognition of its activities, Konica Minolta received Platinum Kurumin certification from Japan's Ministry of Health, Labour and Welfare in August 2017.

Support for Women Balancing Childcare and Career Goals

The childcare leave system at Konica Minolta, Inc. has steadily taken root since its introduction in 1992, and the leave acquisition rate is now 100%. The rate of employees returning to work after childcare leave is also steady at 100%.

In response to the concern of daycare waiting lists, employees with infants are able to take childcare leave until the child reaches the age of 2 years and 3 months, so that even babies born in February or March have two opportunities to get into daycare in the usual registration month of April. Moreover, the company provides salary assistance during a childcare leave period that exceeds the term of childcare leave benefit payment.

After returning to work from childcare leave and until the child graduates from elementary school, employees can choose from a variety of work options including shortened working hours, working from home, and remote work. This allows them to continue building their career according to their family circumstances and their own approach.

In fiscal 2018, the company also introduced an hourly leave system.

Efforts to Promote Childcare Participation by Men

In addition to childcare leave, men who are expecting a child can take a total of five days of paternity leave within one month before or after the baby's due date.

The company has set a goal of 13% of eligible men taking childcare leave in fiscal 2020 and has taken initiatives such as strengthening awareness-raising efforts for men and their supervisors. These efforts bore fruit, with 19% of men at Konica Minolta, Inc. taking childcare leave in fiscal 2019, surpassing the goal early. Going forward, the company will strive to reach even greater heights.

Payment of a “Next-Generation Fostering Allowance”

Konica Minolta, Inc. established a “next-generation fostering allowance” in fiscal 2012, replacing its family allowance and housing allowance. This provides monetary benefits to employees raising children under the age of 18 to support employees in the child-rearing generation. In fiscal 2008, the company also expanded the eligibility for using accumulated paid leave to include reasons such as infant care, or staying home with a child when school is canceled.

Please refer to the Human Resources Data Summary for details on use of the work-life balance support system.

Konica Minolta's Approach

Background and Issues

Nowadays, companies the world over are competing to create new services by leveraging big data with AI and ICT technologies. Konica Minolta, too, is aiming to become a digital company with insight into implicit challenges, the key to which is the transformation of human capital.

The company recognizes that it must first accurately ascertain the needs of customers and society. Then, based on those needs, it must systematically and continuously develop the professionals that can create and provide the kind of innovative value that is unique to Konica Minolta.

Vision

To create innovative value, every person has to let their individuality shine and professionals holding diverse views must engage in uninhibited discussions.

The company's human resources development vision is to empower people who can drive reform, feel a strong sense of ownership and complete projects to the end. Other highly prized qualities include ingenuity, the ability to engage partners, and the ability to create customer value. Konica Minolta wants to develop "business athletes" who can compete globally. This transformation of individuals will drive the transformation of the company.

Key Measures

- Development and recruiting of executive candidates who will be responsible for promoting digital transformation (DX) in Konica Minolta
- Development of executive officer candidates for sustainable growth
- Attracting millennials
- Human resources development utilizing people analytics

Human Resource Development

Developing talent globally and locally

Konica Minolta is training next-generation leaders who can perform globally to win among severe competition. The Group has also set up training programs in Japan to support the growth of each individual employee and actively train our talented members who will lead in the future.

Executive Development Program

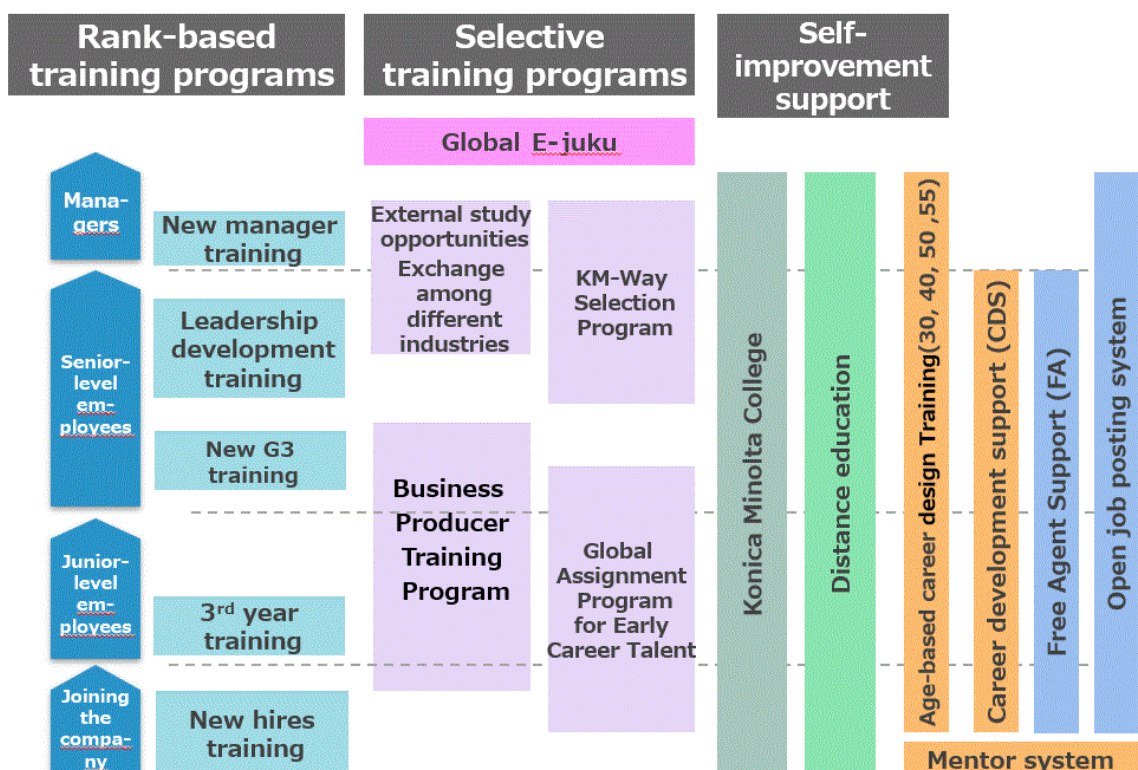

At Konica Minolta, the aim is to foster "true management executives" who can promote creative destruction and succeed globally. This is why, in cooperation with a business school, the business leader education program (called "Global e-Juku") is implemented for executive candidates, including those from Group companies globally. In the fiscal 2018 and 2019 programs, there were a total of 18 participants (10 from Japan and 8 from elsewhere). In conversations with leading executives within and outside of the company, the participants gained an appreciation for what it takes to become a true management executive and expanded their outlook. Discussing DX and other topics, they also tried forecasting the highly unpredictable future business environment, and worked on project proposals for Konica Minolta's transformation to become a digital company with insight into implicit challenges.

Developing a Human Capital System

As the foundation of its OJD,* Konica Minolta, Inc. enhances its impact by providing rank-based training tailored to changes in roles and positions, as well as a range of training programs to raise knowledge and skills. In addition, the company offers a wide range of education programs to complement these. The company focuses resources on its selective training programs, which train the business producers that will lead Konica Minolta in the future. A total of approximately 9,600 employees took the training programs provided in fiscal 2019 (including rank-based training and the Konica Minolta College), and the total time spent in training was approximately 83,000 hours. In addition, the average training time per employee per year was about 16 hours (about 2 days).

* OJD: A variation of on-the-job training (OJT), OJD refers to the development of abilities while facing real-life work challenges, under the guidance of a superior.

Business Producer Training Program (CGF)

Konica Minolta has implemented a program to develop business producers who can drive strong growth, starting in the early stage of their careers. This program, called the Challenge Growth Forum (CGF), is offered to select employees who are motivated to solve social challenges by creating new value. In fiscal 2018, 20 employees participated. The program participants follow a development curriculum as they study and work together at creating new businesses. The curriculum is devised by a governing board made up of members chosen from various fields who have a passion for human resource development. As such, this program also plays a major role as a forum for interaction and diligent study that goes beyond the workplace and that crosses areas of expertise and generations.

Brainstorming new business ideas

KM-Way Selection Program

This program is intended to train leaders who have the mindset and skills to create new businesses, and to foster a culture focused on open innovation strategy, by giving leaders a chance to learn Konica Minolta's own digital innovation creation process (KM-Way). This will help Konica Minolta to transform into a digital company with insight into implicit challenges and to grow sustainably.

Every year, about 30 employees are selected from among general employees and managers for a three to five months program. The participants acquire the mindset and skills needed to implement KM-Way, Konica Minolta's own technology management framework, through case studies, proposal of new businesses and the resolution of management of technology challenges in their own departments. Participants who complete the program are expected to not only implement this on their own, but also play active roles as leaders who promote innovative changes in their own departments while spreading what they have learned within their department.

KM-Way Selection Program (for managers)

System to Develop and Certify ICT Personnel

Konica Minolta has implemented an internal training program to develop ICT personnel who can leverage IT and digital technologies to provide added value from the customer's perspective. The ICT Personnel Skills Certification System has been put in place to certify and register skill levels, from beginner to expert, based on the company's definitions of human capital, such as Data Scientist.*¹ A training curriculum has been developed at each level. In fiscal 2019, 71 employees were certified and registered as Data Scientists, 129 as KM Product Owners*², and 9 as IT Architects.*³ Training was also provided at development sites outside Japan, and efforts have begun to expand the certification system worldwide.

- *¹ Data Scientist: Personnel who can identify decision-making and workflow issues by reviewing various types of data and then establish solutions
- *² KM (Konica Minolta) Product Owner: Personnel well versed in both business and software technology who can maximize return on investment in software development
- *³ IT Architect: Personnel who are responsible for realizing the processes and architecture for providing IT services to customers

Konica Minolta College

This educational program is open to all Konica Minolta employees, with class enrollment available through the Group's intranet system. The college currently offers over 150 courses, covering areas from business skills to expert skills, e-learning topics and distance education. These courses can help employees acquire knowledge of Konica Minolta's technologies and other cutting-edge technologies as well as critical business skills.

Konica Minolta College

Global Assignment Program for Early Career Talent

Konica Minolta, Inc. has a short-term training program that allows early-career employees to go abroad to learn at sales companies and world-class business schools. By practicing leadership and interacting with others possessing diverse values, these employees can improve and expand their outlook, which helps them to succeed on the global stage. The aim is to develop leaders early in their careers. In fiscal 2019, 42 employees participated in the program (half year program).

Group companies outside of Japan also send employees to experience operations at group companies in other countries, including Japan, for several months or even several years. By providing program participants with an opportunity to experience different business customs and cultures, the program is accelerating the development of the leaders who can provide Konica Minolta value worldwide.

Participant taking part in a trade show exhibit

Age-Based Career Design Training

This is a program to support career development at turning-point ages (30, 40, 50, and 55), in order to provide employees with opportunities to think about their careers in light of contributions to the company and their own job satisfaction and to support their own development. Participants think about their future vision through awareness of the environment and self-analysis. After the training, they have an interview with a superior, full-time advisor and work towards independent self-fulfillment.

Age-Based Career Design Training

A Personnel System Designed to Promote Human Resource Development

Assessment and Treatment System

Konica Minolta, Inc. will continue to develop talented personnel who can win among global competition, aiming to create an organization that continues to provide customers with new value. In order to accelerate these results, the company revised its personnel assessment and treatment system for general employees in 2016. A new system that will highly evaluate talented personnel who act in accordance with the Konica Minolta Philosophy and take on the challenge of pursuing ambitious goals without fear of failure was devised.

Moreover, seniority is no longer considered in determining employee treatment. Instead, skills and results are evaluated fairly and reflected in promotions and salary increases.

Open Job Posting and Free Agent Systems

As a complement to the Group's company-led system of personnel assignments, Konica Minolta, Inc. has introduced the Internal Open Job Posting System and the Free Agent (FA) System, which encourage employees to request transfers to new positions on their own. These systems will help produce employees willing to undertake new positions in building their own careers and create a corporate culture that respects the desire to challenge oneself in new ways.

Konica Minolta, Inc. has introduced the Internal Open Job Posting System, which allows employees to apply for open positions posted by departments looking for personnel.

The Free Agent (FA) System allows employees wishing to take on the challenge of a new type of job or department to post their application on the intranet. Departments with open positions review the employees' posts, call promising candidates in for interviews, and if both the department and the employee agree, the employee is transferred to the new job.

With these two systems in place, Konica Minolta continues to facilitate the fluid movement of talented personnel across the Group and to support employees' self-determination in shaping their own careers.

Evaluation by External Parties

Recognized at the Good Career Company Awards 2019 with an Innovation Award (Human Resources Development Bureau Director-General Award from Japan's Ministry of Health, Labour and Welfare)

At the Good Career Company Awards 2019, hosted by Japan's Ministry of Health, Labour and Welfare, Konica Minolta With You, Inc., a special subsidiary of Konica Minolta, Inc., received an Innovation Award, otherwise known as the Human Resources Development Bureau Director-General Award.

The Innovation Award is given to companies that provide support for employees to further their own careers as part of efforts to tackle important issues within the company. In particular, the award recognizes companies with outstanding results from different model of initiatives, such as providing career development support with a focus on target employees and initiative methods, and linking the efforts to human resource development, and eventually to concrete corporate management results.

Reason for Award

Konica Minolta With You was commended for providing career development support that aims to maximize the vocational skills of employees with disabilities. It has been doing this by assigning employees to various types of jobs during their first three years after joining the company, and by helping them to create a long-term career vision with goals to be achieved within five years.

Establishment of a Global HR Organization

Konica Minolta, Inc. has set up a global human resources organization to develop personnel around the world and put the right people in the right positions. The aim is to realize a corporate group that continually provides new value to customers worldwide. The global human resources organization seeks to collaborate with senior management and relevant departments in order to promote individual skills and the capabilities of the entire Group. Various measures are being implemented such as making worldwide human resources visible, preparing individual career development plans, as well as assigning work based on individual career development plans, performing global job rotation, and providing training opportunities in and outside the company. A remuneration system is also being introduced to further motivate employees.

Konica Minolta's Approach

Background and Issues

Workplace accidents put employee safety at risk. They can also affect the neighboring environment, and if serious enough, they can threaten business continuity. Konica Minolta recognizes that preventing workplace accidents and creating workplaces where employees can work safely and confidently is a critical management issue.

Vision

Konica Minolta believes that the foundation of corporate management lies in the maintenance and promotion of workplace safety and health for every employee. The company aims to build a healthy, safe and supportive workplace environment by implementing occupational safety and health initiatives that emphasize daily preventive actions.

Key Measures

Preventing occupational accidents

- Serious accidents*¹: 0
- Frequency rate of accidents causing absence from work*² in the three-year period of the Medium-Term Business Plan: 0.1 or less (FY2017–2019)
FY2020–2022: Reduce to 0.15 or less by FY2020
(The details and results of the company's safety promotion activities from fiscal 2017 to 2019 were reviewed along with the accident levels at other companies in the same industry. By backcasting from a goal of 0.1 or less by 2030, a new plan was prepared and a revised target value was set.)

*1 Serious accidents: (1) Death, disease requiring a long recovery period (or the possibility thereof), an injury resulting in a disability (or the possibility thereof), or a specific contagious disease;
(2) An accident resulting in the death or injury of three or more workers during work at one point or the contraction of a disease (including accidents not accompanied by lost worktime)

*2 Frequency rate of accidents causing absence from work: The number of persons absent from work per one million total actual working hours for current employees

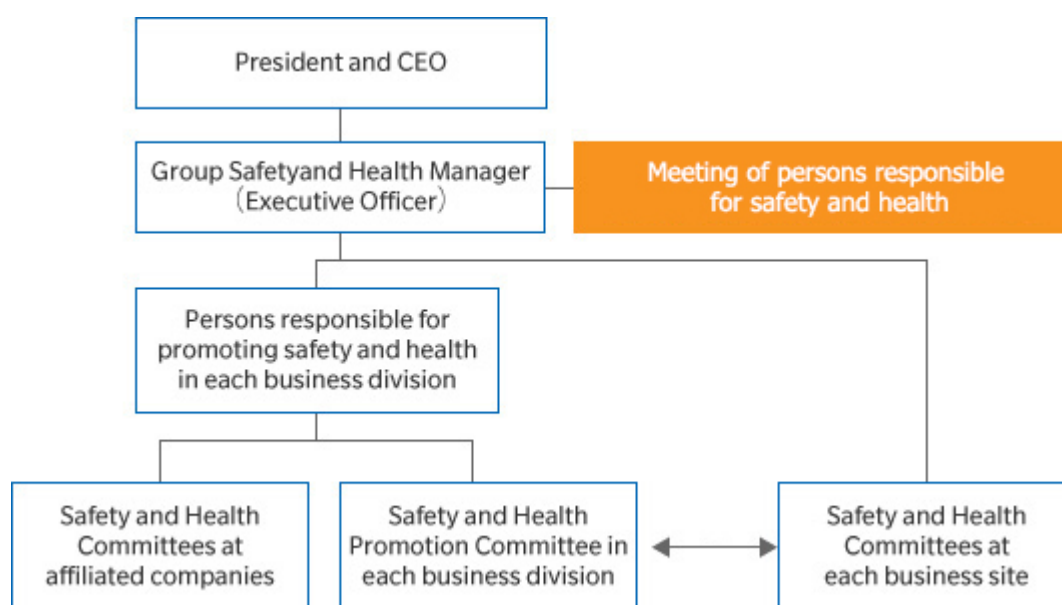

Occupational Safety and Health Management System

The basic policy is: "The Konica Minolta Group believes that the very foundation of corporate management is maintaining and improving the safety of workplaces and the health of all employees. We will strive to ensure healthy, safe and supportive workplace environments by implementing occupational safety and health initiatives that emphasize daily preventive activities." Based on this policy, the Group is promoting activities and initiatives with the following basic approach: "promoting continual improvement of occupational safety and health issues based on quantitative evaluation and analysis of effects and impacts, using various types of data on occupational safety and health." The Occupational Safety and Health Management Regulations aim to ensure the health and safety of everyone working in the Group (officers, employees, contract employees, employees dispatched from an agency, and part-time employees) as well as Group service providers (staff contracted from other companies and commissioned businesses providing services within the Group).

The Konica Minolta Group's safety and health management system is shown in the figure below. Appointed by the President and CEO of Konica Minolta, the Group Safety and Health Officer (Executive Officer) recommends the appointment of the persons responsible for safety and health promotion in each business division, as well as the Safety and Health Committee members at each site. Group meetings of persons responsible for safety and health, including an industrial physician, are held, and policy decisions and progress checks are made on measures to promote health and safety. In addition, the company regularly performs internal audits of activity plans and progress at each site and group company, when necessary, such as after an accident, and provides instructions for improvement.

Each site in the Konica Minolta Inc. and group companies in Japan have established a Joint Labor-Management Safety and Health Committee that meets once a month as an organization to promote enhancement of occupational safety and health. The committee is composed of, in accordance with the law, a general health and safety manager, a safety manager, a health manager, and an industrial physician as well as members from the company and labor union. Half of the members are appointed based on the labor union's recommendations. In addition, safety and health management in business promotion is carried out in the form of a Safety and Health Promotion Committee in each business division. When major safety and health problems or concerns are identified, they are reported immediately to the Group safety and health manager and instructions for correction and countermeasures are issued to the Group Safety and Health Management Secretariat. The Secretariat considers/examines the content and works with the relevant division to implement it and then disseminate it throughout the Group.

In addition, the company has a complaint handling system concerning occupational health and safety. The system involves the Safety and Health Committees and the Safety and Health Promotion Committees interviewing employees concerning incidents, information concerning defects and improvement proposals. Approximately 50 people across the entire Group are engaged as full-time staff for occupational safety and health.

Konica Minolta Group Occupational Safety and Health Management System

All group companies in Japan and the Group's main production companies outside Japan have adopted an occupational safety and health management system. Some group companies have obtained external certification, including OHSAS 18001 and ISO 45001. On an employee-number basis, 14% of the Group's global workforce is in a worksite that has acquired external certification (as of March 31, 2020).

Preventing Accidents During Working Hours

Strengthening and Continuously Carrying Out Risk Reduction Efforts to Prevent Occupational Accidents

During the period of the Medium Term Business Plan (FY2017-2019), the Konica Minolta Group's targets were zero serious accidents*¹ and an accident frequency rate*² of 0.1 or less. During the period of the next business plan (FY2020-2022), the Group will implement a variety of measures to prevent accidents from occurring during working hours, with the goal of reducing the rate to less than 0.15 by fiscal 2022. With the occupational safety and health management system (OSHMS) and the organization of safety and health committees serving as the cornerstones, the Group works through the PDCA cycle, focusing on general risk management to deal with business changes and varied daily activities.

Konica Minolta's Safety and Health Initiatives

As a rule, any accidents that occur within the Konica Minolta Group are recorded in an accident database system within 24 hours, and the information is shared.

In fiscal 2019, there were no serious accidents.*¹ However, there were 13 accidents causing absence from work (involving 4 men and 3 women in Japan and 4 men and 2 women outside Japan). The frequency rate of accidents causing absence from work*² was 0.23 in Japan and 0.23 outside Japan, and the accident severity rate*³ was 0.0052 in Japan and 0.0023 outside Japan.

According to the Survey on Industrial Accidents by Japan's Ministry of Health, Labor and Welfare, the average frequency rate of accidents causing absence from work in fiscal 2019 was 1.20 in the Japanese manufacturing industry, and was 0.54 in the Japanese electrical machinery and equipment manufacturing industry. Konica Minolta has been maintaining a rate below this industry average.

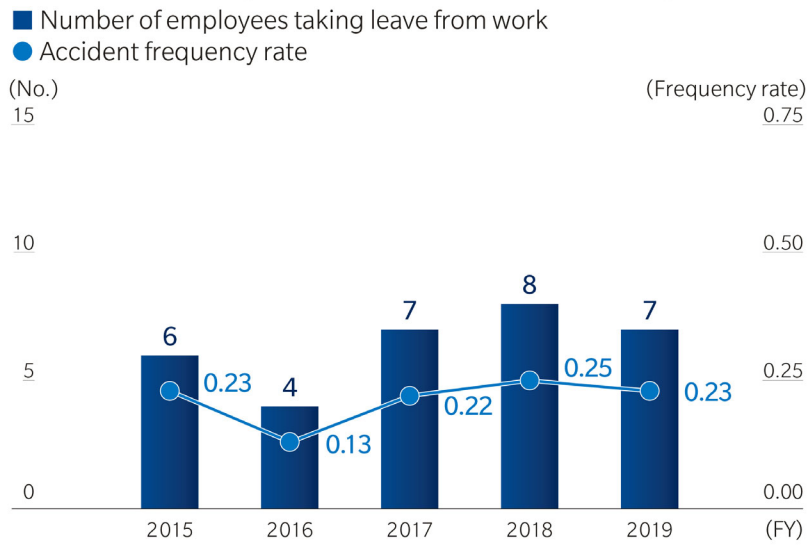

*1 Serious accidents:

1. Death, disease requiring a long recovery period (or the possibility thereof), an injury resulting in a disability (or the possibility of a disability thereof), or specific contagious diseases
2. Accidents that cause three or more employees at one time to suffer on-the-job death, injuries or diseases (including accidents that do not cause absence from work)

*2 Accident frequency rate: The number of persons absent from work per one million total actual working hours for current employees

*3 Frequency rate of accidents causing absence from work: The total number of days absent from work per 1,000 total actual working hours for current employees

*1 Regular employees and temporary employees at sites in Japan and production sites outside Japan

*2 Contract workers at production sites in Japan

In fiscal 2017, the Konica Minolta Group adopted “Unsafety Marks” as a new safety management indicator tailored to Konica Minolta’s business operations. It was created with reference to the best practices of leading manufacturers in terms of safety. Each accident including not only those causing absence from work but also those not causing absence from work, commuting accidents and even fires and explosions, is assigned a numerical value based on the type and severity. The values for all the accidents are then totaled to obtain a score for the safety level of a site. Low Unsafety Marks indicates a high level of safety. The purpose is to use this indicator to identify and analyze the causes of accidents, in order to help prevent accidents from occurring or reoccurring. In fiscal 2019, Konica Minolta aimed for a 50% reduction compared to a benchmark average annual unsafety score for accidents in the Konica Minolta Group from 2014 to 2016, but the reduction stood at only 27%.

In fiscal 2020, Konica Minolta reviewed the details and results of its safety promotion activities from fiscal 2017 to 2019, along with the activities and results of other companies in the same industry. Based on the new safety promotion activity plans and measures that were prepared in response, the Unsafety Mark target values will be reset and managed.

Providing Safety Training

The Konica Minolta Group conducts grade-specific employee education both in Japan and overseas. Safety training is provided for all employees at the time of recruitment or task modification, as well as safety training for newly appointed managers and executives, respectively.

In each workplace concerned, the company conducts training in hazardous materials safety based on the Fire Service Act, training in high-pressure gas safety, training in machinery and equipment safety, and so on. Safety training is also given for especially high-risk work, covering topics such as preventing fires, explosions and forklift accidents.

Safety Mental Refresh Education

Beginning in fiscal 2017, Konica Minolta began offering a short (five minutes per session) “refresh” course to remind employees to be aware and take actions to protect one’s own body oneself. In fiscal 2018 and 2019, this “refresh” course was given in a monthly e-learning format to around 12,000 employees of Konica Minolta, Inc. and group companies in Japan each year. It was taken by about 86% of the target employees. The production companies in China provide Japanese e-learning content that has been translated into English and Chinese and tailored to the conditions of local companies. In addition, companies also provide education based on video materials—case studies on accidents that have occurred in the Group created by the safety personnel—as part of the sites’ ongoing efforts to raise safety awareness.

Safety Dojo Education

Safety Dojo is an initiative that it began in fiscal 2014, primarily at production sites outside Japan, with the purpose of preventing accidents by allowing employees to experience the fear of accidents through simulated experience of mock accidents involving being dragged into rotators, pulled into V belts, or caught in cylinders. The program was rolled out throughout Japan in fiscal 2017, and it was implemented at all production sites in Japan in fiscal 2018. Along with the continuation of this initiative in fiscal 2019, a realistic training program using virtual reality technology was launched.

Traffic Safety Measures and Education Using Drive Recorders

Konica Minolta Japan promotes eco-driving and safe driving by installing drive recorders in all sales cars and monitoring driving conditions. This has succeeded in reducing traffic accidents.

In addition, videos of near misses caught on the drive recorders are shared in traffic safety courses held at Konica Minolta sites throughout Japan as examples that hit close to home. This has been effective in reducing traffic accidents.

Initiatives to Share Near Misses at Sites in Japan (Voluntary Activity)

In fiscal 2017, each site in Japan made and shared maps of dangerous spots near the site, as indicated by employees, with the aim of eliminating commuting accidents. Having done so, some sites were able to reduce the number of commuting accidents to one-tenth that of the number in fiscal 2016. The results of this activity were announced at the 76th Japan National Industrial Safety and Health Convention in fiscal 2017.

In fiscal 2018, an online questionnaire database into which employees can enter information was used to share dangerous spots on worksite premises (stairs, corner blind spots, etc.), and the information was then used in countermeasures.

This initiative continued in fiscal 2019 in order to help reduce accidents while walking onsite (tumbling over or falling down stairs, etc.) and commuting.

Strengthening Safety Management

Strengthening Safety Management through the Konica Minolta Group's Globalization and by Responding to Business Changes

Meetings of Personnel Responsible for Health and Safety in China

Since fiscal 2014, Konica Minolta has been strengthening safety and health, including health management, by holding meetings (twice per year) of personnel responsible for health and safety in China at all subsidiaries and affiliate companies, including companies involved in production, sales, development, and their overall administration. The benefits obtained from the meetings included sharing of the current safety and health status and initiatives of each company, making requests to Konica Minolta for support with equipment safety measures, discussion of issues such as the health challenges of expatriate personnel resulting from differences in lifestyle habits, climate, and environment, and making resolutions on policies and measures for improvement.

Strengthening Overall Risk Management on Occupational Safety and Health

Overall risk management on occupational safety and health is a system for comprehensively assessing and reducing the risks that could result from new equipment, chemical substances, personnel, and procedures when business changes are made. In addition to conventional equipment safety, in fiscal 2016, Konica Minolta started expanding a system of collaboration among workplaces company-wide to assess risks from a wide range of perspectives, including health problems caused by chemical substances and fires caused by explosions. The company is continuing to expand this system while enhancing its content.

Safety Activities Outside Japan (at a Production Plant in Malaysia)

At a production plant in Malaysia, the Group Safety and Health Secretariat, production control department, and the plant's production site staff worked together to identify and reduce risks in new equipment and to carry out voluntary activities such as 5S activities and QC Circle activities to increase professionalism and safety awareness based on the setup of a model workplace. The plant is conducting digital manufacturing under a system undergirded with safety measures.

Initiatives to Increase the Health of Employees

▼ Konica Minolta's Approach

▼ Promoting Sound Management through the Fostering of a Culture Committed to “Health-First”

- Minimizing the Number of Persons with Health Risks
- Measures to Address Overwork
- Promoting Health through Visualization of the Level of Employees' Health
- Supporting Women's Health
- Konica Minolta Included in Health and Productivity Stock Selection

Konica Minolta's Approach

Background and Issues

Konica Minolta recognizes that ensuring employees' mental and physical health and linking this effort to improved productivity and performance are critical management issues, given the growing social issues of a higher risk of lifestyle diseases and people having to leave work due to mental health issues.

Vision

Konica Minolta recognizes that employee health is the foundation of everything else it does. This is why the company works so hard to realize the full potential of human resources, while building workplaces where all employees can maintain good physical and mental health and continue to work with vitality—thereby raising employee capacity and laying the groundwork for sustainable growth. Konica Minolta accomplishes this by fostering a “health-first” culture and practicing sound safety and health management.

Key Measures

Promoting health management

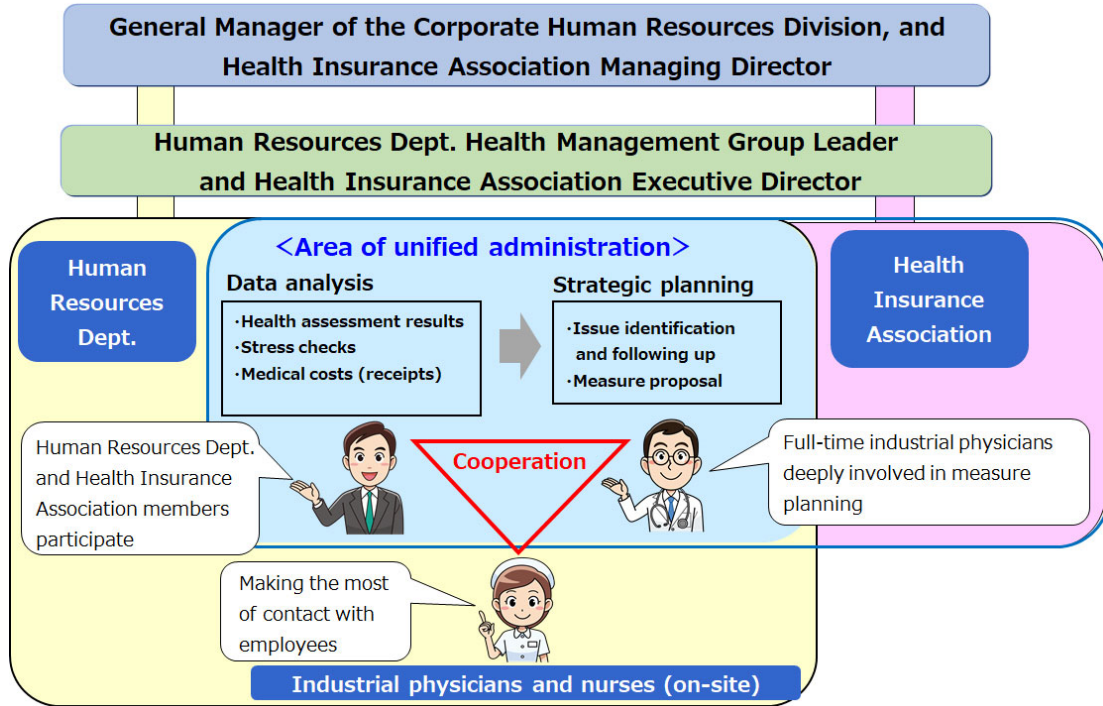

- Improving the organization's productivity and dynamism
 - Reduce the number of workplaces with the highest stress levels, as determined by stress checks, by 50%
 - Improve the percentage of workplaces that have improved their average score in the organizational health survey results from below 3.5 to 3.5 or above by 10% or more
 - Promoting the movement toward health
 - Reach the top 10% among major Japanese companies in all four indicators for lifestyle habits (diet, physical activity, smoking rate and sleep)
 - Minimizing the number of individuals with health risks
 - Reducing the number of people with high physical health risk by 18.6%
 - Reducing the number of days people are absent for mental health reasons by 13.5%
- *Set overall target for the Konica Minolta Group in Japan for fiscal 2022, the last year of the medium-term management plan, with fiscal 2019 as the benchmark

Promoting Sound Management through the Fostering of a Culture Committed to “Health-First”

Striving to create workplaces where employees can work with enthusiasm

Konica Minolta has issued a statement on health, the Konica Minolta Group Health Declaration, which sets out the principles for promoting health management. Based on this declaration, it plans and implements policies under a single management structure (collaborative health) so that the best use can be made of company resources and its Health Insurance Association. The company is enthusiastically implementing health-promotion measures while practicing swift decision-making, including by management personnel, on important issues, with the Corporate Human Resources General Manager acting as managing director of the Health Insurance Association and the person responsible for health management in the Human Resources Department acting as the executive director.

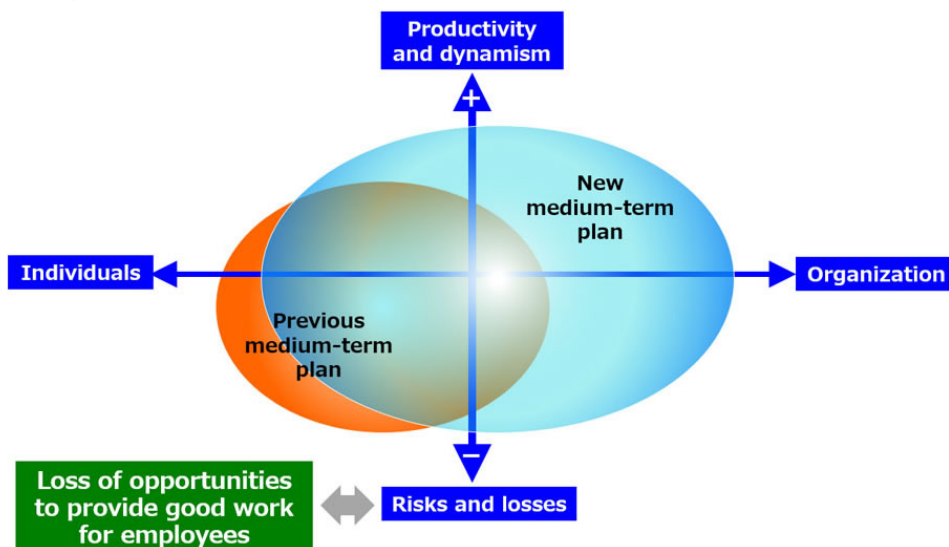

Organizational (Collaborative Health) Structure for Promoting Health Management

In order to achieve the principles of the Health Declaration, Konica Minolta linked it to the company’s medium-term management plan and established the Health Challenge 2019, a new medium-term plan that started in fiscal 2017 and which carries on from the three-year medium-term health plan, Health KM2016, which ran from fiscal 2014 to fiscal 2017. The new plan's priority is lifestyle modification (fostering a "health movement") by minimizing the number of persons with health risks and visualizing their health status.

From fiscal 2020, in its new medium-term plan, the company decided to become the “Happiness Company 2022,” and expanded the scope of its initiatives from risk management to improving productivity and dynamism and from individuals to the organization in the belief that this will lead to the company’s sustainable growth.

Comparison of the positioning of the previous medium-term plan (fiscal 2017 to fiscal 2019) and the new medium-term plan (fiscal 2020 to fiscal 2022)

Raise corporate value and achieve sustainable growth for the company

Improve productivity and dynamism: Build a new framework and aim for improvements by linking business divisions and sites

Risk management: Follow PDCA in all workplaces using the existing framework

Moreover, with the aim of expanding initiatives covering employees of Group companies outside Japan, the company has created a Chinese version of the Konica Minolta Group Health Declaration in an effort to raise health awareness among local employees in China, where the Group's major production sites are located.

 [Konica Minolta Group Health Declaration \(PDF\) \(430KB\)](#)

Konica Minolta Group Health Declaration

“Creating a work environment filled with vigor and enthusiasm”

Konica Minolta Group declares that we will contribute to the development of a healthy society by promoting healthy management practices through our corporate culture, which is characterized by the statement “health is first priority”. We understand that our employees’ health is the key to everything.

Acknowledging that each employee’s physical and psychological health is a valuable resource, we will create the ideal secure and comfortable environment (company).

We hope that our employees realize that health is the key component for each individual and family, and for our company; and we expect them to take independent action to improve the maintenance of their health and to proactively engage in our “health is first priority” culture.

April 2014
Shoei Yamana
CEO, President and Representative Executive Officer
Konica Minolta, Inc.

Minimizing the Number of Persons with Health Risks

Konica Minolta is committed to improving the health of its employees in order to strengthen its talent pool, which is vital to achieving its management strategy. The Group companies in Japan and the Health Insurance Association work together to plan and implement various measures. They categorize those with health risks according to physical and mental health risks and set numerical targets with the aim of reducing the number of people in each category through employee-centered measures. For physical health management, Konica Minolta is focusing on preventing the development of serious illness for all Group employees in Japan. As a result of guidance from occupational health staff and stronger encouragement of check-ups, in fiscal 2019 there was an 84% decrease in the number of employees with the highest health risks, compared to fiscal 2013. With that, hospitalization expenses per employee increased by 19% at Konica Minolta compared to a 30% increase in the general population (average for the National Federation of Health Insurance Societies), suggesting that Konica Minolta's measures to prevent the development of serious illness have yielded results.

In fiscal 2019, 100% of Group employees in Japan had a regular health examination. The examination rates of different screenings offered with the aim of early detection of and prompt response to cancer are given below.

Rate of cancer screenings in fiscal 2019

Area examined	Examination rate
Lungs	99.1%
Stomach	95.8%
Large intestine	94.1%
Prostate	97.6%
Breasts	66.0%
Uterine cervix	40.9%

(Scope: All employees of the Konica Minolta Group in Japan)

Konica Minolta works with the Health Insurance Association to conduct specified health checkups, and health recommendations are provided based on the results, for the prevention of lifestyle-related diseases. Conventionally, specific health guidance was given by public health nurses commissioned by the Health Insurance Association. From fiscal 2018, however, some of this work is being commissioned to external specialist providers. Konica Minolta's public health nurses focused on health guidance for employees with a higher health risk. Employees subject to specific health guidance due to being at the pre-lifestyle-related disease stage were given finely tuned assistance drawing on the expertise of the specialist providers. As a result, in fiscal 2019, the initial interview rate and interview completion rate both improved substantially compared to fiscal 2016.

As part of mental health management, stress checks are conducted twice a year for all employees of the Konica Minolta Group in Japan. While allowing employees to utilize their results for self-care, Konica Minolta also classifies workplaces into four levels of stress based on the results of the stress checks and shares this status with organizational heads. Improvement measures are then devised and implemented for workplaces at Level 4, the highest level of stress. In order to strengthen the line care function, mental health e-Learning modules are also provided regularly to managers across the Group, with the aim of early detection and prompt response for individuals with mental illness. The completion rate for these modules remains around 95%. Konica Minolta has expanded its mental health training from cautionary initiatives focused on conventional strengthening of line care to proactive initiatives intended to improve the workplace culture. In addition, beginning in fiscal 2020, the Group implemented an organizational health survey, the scores of which have a strong correlation to productivity, and is using the results of this analysis to improve workplaces.

Konica Minolta has also established a reinstatement preparation program for employees returning to work from leaves of absence taken due to mental health problems. People in the program are provided with careful support to facilitate a smooth return to work, including at least three interviews with an industrial physician, workplace head, and the HR department during the rehabilitation period, which lasts up to three months.

As a result of these measures, the total number of leave-of-absence days taken due to mental health problems by Konica Minolta employees in fiscal 2019 was down 35% compared to fiscal 2014, and the percentage of people taking these leaves of absence improved from 0.64% to 0.38%.

Also, on an employee engagement survey conducted periodically (once every two or three years), the percentage of favorable responses to questions about work engagement (job satisfaction and desire to take on challenges) increased from 72% in fiscal 2015 to 75% in fiscal 2017.

Days of Leave Taken Due to Mental Health Problems and Percentage of People Taking Leaves of Absence

Measures to Address Overwork

Since fiscal 2007, in order to prevent health problems due to overwork, Konica Minolta has been sending guidance on reducing overtime via email to employees and their supervisors when the employees' overtime work has exceeded 30 hours or more hours.

When employees have logged more than 80 hours of overtime in a month, they are required to have a medical checkup administered by an industrial physician during the following month to ensure their health. Their supervisor is required to submit a work improvement plan in a thoroughgoing effort to prevent employees from working long hours two months in a row. Furthermore, as of fiscal 2016 the health checkup standards have been revised. Now, employees who have logged 60 or more hours of monthly overtime three months in a row and employees who have logged 45 or more hours of overtime in the previous month can opt to have a medical checkup by an industrial physician. In this way, Konica Minolta is improving the prevention of health problems caused by overwork. As a result of these countermeasures, the number of employees (total annual number) who logged 80 or more hours of monthly overtime declined by 61%, from 557 in fiscal 2015 to 219 in fiscal 2019.

Promoting Health through Visualization of the Level of Employees' Health

Konica Minolta has established indicators that show the level of employees' health visualizing the daily lifestyle increases in health awareness. The Group companies in Japan also implemented assistance programs aimed at promoting health in an effort to raise the level of employees' health.

Group-wide in Japan, it holds walking events in which teams compete against each other in order to instill exercise and walking habits among employees; holds exercise workshops with outside instructors; offers healthy menu choices in cafeterias; holds seminars led by nationally registered dietitians with the aim of improving eating habits and raising awareness; among various other activities.

An exercise workshop

On a website designed to encourage employees to stay healthy, Konica Minolta shows employees a comparison of the average incidence of cardiovascular disease, stroke, and ischemic heart disease within 10 years for their specific age group based on their latest medical examination results. In this way, the company encourages employees to improve their lifestyle habits. This system can also be accessed and utilized by employee spouses who are health insurance dependents.

**These are reference values calculated based on existing research results.
Please use them as motivation to reconsider your lifestyle habits.**

----- For persons aged 40 and older -----

Your blood vessel age	Risk rate of developing cardiovascular disease in 10 years	Risk rate of having a stroke in 10 years	Risk rate of developing ischemic heart disease in 10 years	Risk reduction simulation
High Explanation	1.4 times	1.6 times Details	1.4 times Explanation	

Example presentation of future disease risk on the website

Moreover, as a measure against passive smoking, Konica Minolta has cut back on indoor smoking areas, moved indoor smoking areas outside and holds no-smoking days on the premises. In addition, the company recommends that smokers participate in smoking cessation support programs. In light of the strengthening of legislation related to smoking, Konica Minolta prohibited all smoking on its premises and during designated work hours across all group companies in Japan, in April 2020, in order to strengthen measures against second-hand smoke and further reduce the smoking rate.

No-smoking day notices

Reduction in the Number of Smoking Areas and the Smoking Rate

An analysis of survey results to determine the main causes behind presenteeism* showed that measures addressing back problems, individual guidance from experts for people with sleep problems and mental health measures had reduced loss due to presenteeism per employee (monthly average) from 68,398 yen in fiscal 2016 to 45,976 yen in fiscal 2019, for a 32.8% decrease.

*Presenteeism refers to productivity loss resulting from health problems.

Supporting Women's Health

With a view toward promoting women's advancement in the workplace and enhancing support for their health, Konica Minolta strives to increase the rate of cancer screenings, with the aim of early detection of and prompt response to cancers that affect women. It took steps to make it easier to get screened, including bringing screening trucks onto company premises and increasing the number of cooperating medical institutions, in addition to subsidizing screening costs through the Health Insurance Association. The screening rates for breast cancer and cervical cancer in the Konica Minolta Group in Japan increased greatly as a result.

As part of its awareness-raising efforts aimed at further increasing the screening rate, Konica Minolta invited the actress Kuniko Asagi to give a talk in September 2019 about the importance of getting screened for the purpose of early detection, in light of her own experience with breast cancer. The talk was attended by close to 500 employees.

In November 2019, Dr. Tomoko Shibayama of the Breast Oncology Center, the Cancer Institute of JFCR was invited to give a talk on the current status of cancer in Japan, types of breast cancer and changes in treatment, mechanisms behind hereditary cancer and methods for preventing cancer. More than 200 employees attended the talk.

Dr. Shibayama speaking with enthusiasm

Dr. Shibayama's presentation

Konica Minolta also holds Energetic Health Seminars for Women taught by outside experts to help maintain and raise performance by learning methods to deal with women's health issues such as menopausal disorder and premenstrual syndrome, not just cancers particular to women.

Measures to Prevent the Spread of the Novel Coronavirus

As part of its efforts to improve the health of its employees, Konica Minolta has always endeavored to prevent infectious diseases. In Japan, the company provides information on influenza outbreaks, encourages employees to get flu vaccinations, and provides information on malaria, hepatitis, HIV, and other infectious diseases to employees posted outside Japan and their accompanying families as well as for employees traveling abroad on business trips. In addition, Konica Minolta strives to prevent infectious disease by quickly identifying cases of tuberculosis through chest X-rays in its health checkups for employees and taking the necessary steps in response.

As such, when the novel coronavirus began to spread, Konica Minolta's first priority was the health and safety of employees and their families, and the entire Group was devoted to countermeasures to prevent infections and the outbreak's spread.

In February-March 2020, the initial stage of the outbreak's growth in Japan, Konica Minolta asked employees to check their temperatures and general physical health before coming in to work, to wash their hands carefully and use an alcohol-based disinfectant on their hands, and to wear a mask and avoid crowded spaces. In workplaces, the Group took measures such as staggering the work times at which employees arrive and utilizing remote work and ventilating rooms, banning meetings of 30 people or more (recommending meetings via ICT instead), staggering times during which the cafeteria is used (three time slots of 30 minutes each) and instructing employees to leave seats open between people when dining.

When the government declared a state of emergency in April, the focus was on preventing infection by designating work from home in principle and reducing contact with other people as much as possible. Konica Minolta asked employees to stay home as much as possible and to refrain from traveling to their hometowns during the long national holidays.

At the same time, an increase in remote work done at home raised concerns about a lack of exercise and mental health issues, so the company sent all employees e-mails with content such as "Fitness Video for Easy Home Exercises," "Ways to Address Mental Health Issues Resulting from Remote Work at Home and Consultation Services," "E-Learning on Self-Care (15-minute video)" and encouraged their use as necessary to support their mental and physical health.

Konica Minolta decided to postpone the regular health checkups held every year until autumn, in light of the risk of contagion among employees.

Once the state of emergency was lifted, employees in each division that needed to come in to the office were determined, and the number of employees coming in every day was set on the condition that employees maintain social distancing in the office. The company took various steps to ensure social distancing, such as removing some of the unassigned seats and making both conference rooms and regular rooms available as work spaces.

Konica Minolta Included in Health and Productivity Stock Selection

Japan's Ministry of Economy, Trade and Industry and the Tokyo Stock Exchange jointly work on the Health & Productivity Stock Selection. Konica Minolta, Inc. has been selected five times—in 2015, 2016, 2018, 2019, and 2020.

Konica Minolta publicized its inclusion in the Health & Productivity Stock Selection, together with other external recognitions such as winning the Grand Prize in the Smart Work Awards, via various media channels. As a result, even though a shortage of new graduate entries is the biggest problem facing about 40% of major companies, the number of new entries for Konica Minolta was unchanged in fiscal 2020 from the previous year, when the Group had a record-high number.

Additionally, as a result of the various measures implemented cooperatively by Group companies in Japan, eleven Group companies were chosen for the 2020 Certified Health & Productivity Management Outstanding Organizations Recognition Program organized by Japan's Ministry of Economy, Trade and Industry. Six companies were selected for the Health & Productivity Management 500 Organizations division; one, in the large corporation division; and four companies were recognized in the small- and medium-sized organization division.

Promoting Reform of Corporate Culture and Communication

Promoting Corporate Culture Reform

Practicing the Six Values of the Konica Minolta Philosophy

The Six Values of the Konica Minolta Philosophy are meant to be practiced by employees as a cornerstone of their daily activities. The Group believes this can lead to a continual supply of new value for society and customers, as indicated in the Philosophy. Through its global award system (Business Contribution Awards, Transform Awards), Konica Minolta singles out cases worthy of commendation and seeks to share the same values Group-wide. This creates a culture of recognition and fosters a willingness to take up challenges. In particular, the Transform Awards recognize employee approaches and activities that involve taking on the challenge of creating new value and helping to solve issues for society and customers. They also encourage a global groundswell in which other employees acquire the same expertise and utilize it in their workplaces. Konica Minolta, Inc. reflects these principles in its human resources system so that employees always consider the Six Values in their actions. The Group is transforming its corporate culture to foster employee practice of the Six Values.

Transform Awards presentation

Organizational Culture Transformation

Konica Minolta have started efforts to transform their organizational culture where each employee, as a "business athlete," can compete in the global arena. The aim is to create a culture and structures that will allow them to continually undertake challenges while capturing the benefits of co-worker diversity. In fiscal 2019, 16 KIZUKI workshops were held, with 326 employees, consisting of 163 pairs of managers and millennial subordinates, participating from 163 internal organizations. The purpose was for the managers and young subordinates to better understand and trust one another through dialogue. The workshop theme was "Creating organizations where people feel confident to engage in open and frank discussions regardless of their position."

The Japanese word "kizuki," which means "awareness," was used to emphasize the need for employees to be aware of the differences in the values held by managers and subordinates, and to remind everyone that their actions and words help shape the organizational culture. The desire was for participants to gain a new awareness through the workshop and to take that awareness back to their workplaces and use it to help build even better working environments.

Internal Information Sharing

Group Communication Activated Through Multiple Channels

Promoting Networking

Since April 2017, Konica Minolta, Inc. has made available company facilities, such as employee cafeterias, as places for people from different departments to meet for activities like social meals. This allows diverse groups of employees to gather together, share ideas and create innovation.

The company helps to cover the cost of gatherings planned by employees and submitted to HR, with the aim of encouraging employees who want to break through organizational barriers and expand internal networking. The young mid-level employee community and cross-division engineering network that use this system are creating new ties within the company.

Human resource exchange event organized by employees

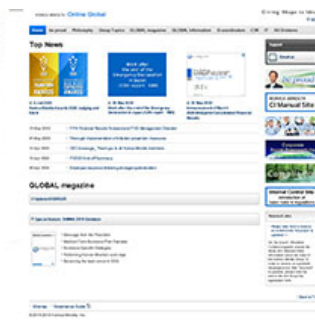

Utilizing the Intranet

Konica Minolta has established Konica Minolta Online (Japanese) and Online Global (English) on its intranet, each of which plays a central role in intra-Group communication. These sites are designed to promote the sharing of Group-wide policies, as well as information regarding individual Group companies. They also serve as a tool to facilitate the direct exchange of information and communication between top management and employees.

The content of these sites includes a message board for the president of Konica Minolta, Inc., which enables the president to send messages directly to all the employees of all of the Group companies.

Konica Minolta Online

Online Global

Utilizing Group Journal

The Konica Minolta Group publishes a quarterly journal entitled Global Magazine (in Japanese, English and Chinese) and distributes it to its employees around the world. This publication presents information relevant to the entire Group from a worldwide perspective, extending beyond the borders of companies, organizations, and regions. It includes special articles introducing the Group's direction and innovative initiatives. Also, together with the publication of the journal, the Group is strengthening its bilateral communication through the use of such tools as the intranet and employee surveys.

Communication Coordinator System

Communication coordinators are assigned to each Group company around the world and serve to communicate information relevant to their departments to the Group, and Group-wide information to their departments. By essentially acting as spokespersons for their workplace and company, these coordinators support the cultivation of a sense of Group unity, the assimilation of multiple vectors, and the demonstration of synergy by promoting communication.

Building Work Environments Where Employees Enjoy Job Satisfaction

Konica Minolta regularly conducts surveys on views about work and the workplace held by all of its employees worldwide, with the aim of maintaining work environments where employees feel engaged, are fully engaged, and embrace challenges. In the 2017 survey, 75% of respondents worldwide gave a positive response regarding enthusiasm at work and their desire to take on challenges (sustainable engagement).^{*1}

Question	2015	2017 ^{*2}
Employees' enthusiasm at work and their desire to take on challenges (Sustainable engagement)	72%	75%
Response rate	87.6%	88.8%

^{*1} Percentage of employees who showed a positive opinion (upper two choices out of five options) on questions related to employees' enthusiasm at work and their desire to take on challenges (sustainable engagement).

^{*2} Some of the content of the questionnaire in 2017 differed from that in 2015.

In April 2020, 84 new graduates joined in Konica Minolta, Inc. The overall turnover rate for fiscal 2019 was 3.2%. In addition, the rate of turnover within three years for employees who joined the company in 2017 was 8.9%.

Diversity

Our Concept

Making the Most of Employee Diversity to Create New Value

One of Konica Minolta's strengths as a global company is that employees of different national origins, races, beliefs, cultures, languages, genders, ages and expertise work together in regions all over the world. It is this diversity that leads to innovative thinking and original ideas, thus generating new value that helps provide solutions for customers and society.

This kind of value creation embodies the concept of "Inclusive and Collaborative," one of the six values that makes up the Konica Minolta Philosophy. This value refers to the power and collaboration generated by embracing our workforce's diverse backgrounds and ideas.

In addition to human resource diversity, Konica Minolta also recognizes the diversity of capabilities demonstrated by its diverse teams, and will keep striving to create even greater value by leveraging various differences.

Konica Minolta, Inc. prioritizes ensuring diversity and inclusion and to pursue these principles to create new value for customers and society while driving the company's own advancement.

Konica Minolta, Inc. not only has a very diverse workforce, but also takes a wide range of measures to create an environment where employees can exercise their own unique skills while supporting each other and performing at a high level. Recently, Konica Minolta has focused on promoting the performance of its female employees and training global leaders. Adding to the results of these efforts, further innovation is driven by the mutual invigoration that takes place when employees each perform at their full potential.

Diversity Promotion System

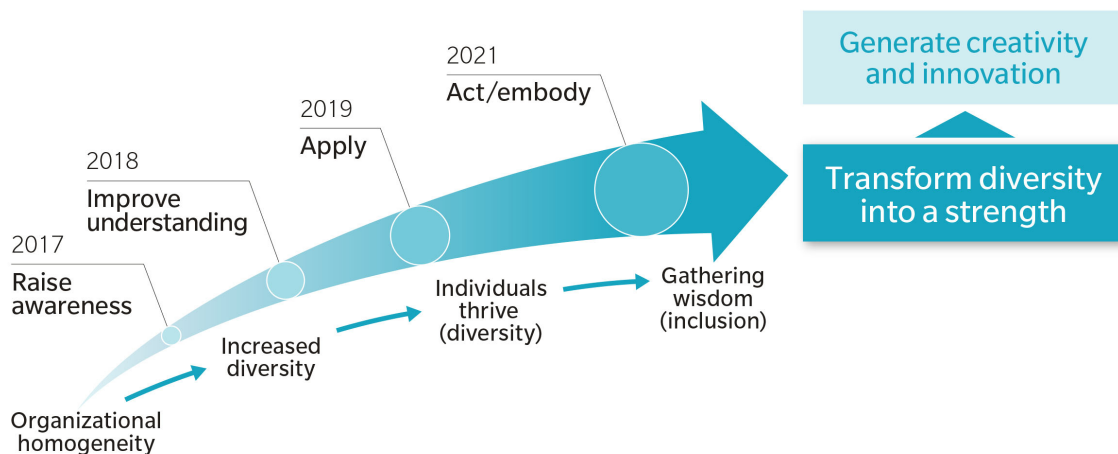

At Konica Minolta, the president is responsible for promoting diversity, and the Corporate Diversity & Inclusion Office drives the relevant initiatives.

The office plans and implements various measures including training for employees, awareness-building activities, and internal status surveys, and it regularly reports the results of these initiatives to the president. The importance of the diversity and inclusion efforts is communicated by the president personally in and outside the company, along with the achievements.

In fiscal 2014, Konica Minolta launched its medium-term business plan, TRANSFORM 2016, targeting success in the IoT era. In fiscal 2017, the new plan, SHINKA 2019, was introduced, under which the company is promoting business transformation with the aim of becoming a truly global company of excellence. It goes without saying that innovative human resources are needed to accelerate digital transformation (DX) and achieve this business transformation. The concept of diversity and inclusion is more important than ever before, and it is critical that this be reflected in the actions of employees. Against this backdrop, in fiscal 2017, Konica Minolta, Inc. established the Corporate Diversity Office, reporting directly to the president, reflecting the president's strong commitment to promote diversity. In April 2019, the organization's name was changed to the Corporate Diversity & Inclusion Office reflecting Konica Minolta's decision to be inclusive of diverse individual personalities and to bring everyone together to drive innovation.

The Corporate Diversity & Inclusion Office is working to foster an organizational culture that embraces all kinds of personalities, values everyone's individuality equally, and brings together diverse individuals to create a powerful force. Konica Minolta continues to promote the active advancement of female employees, which it has been emphasizing since fiscal 2016, and is working on various initiatives in this area. Recognizing the importance of fairness in job assignment and equal-opportunity hiring, as well as the relevant issues, the company conducts fact-finding surveys and analyzes them.

The Corporate Diversity & Inclusion Office is striving to ensure a deep understanding of diversity and inclusion among employees, and since fiscal 2016, it has been working to support the success of Konica Minolta's female employees. The office also continues to work with various departments to promote the participation of international employees and people with disabilities by creating an organizational culture that respects not only diversity in attributes, such as gender and nationality, but also diversity in values and views of life.

Supporting Women's Career Building

▼ Konica Minolta's Approach ▼ Supporting Career Development of Women

▼ Initiatives to Support the Success of Female Employees

Konica Minolta's Approach

Background and Issues

Gender equality and women's empowerment are key issues for the global community, and they are also vital to achieving the SDGs. In Japan, however, despite the fact that both men and women are generally highly educated, the reality is that women still face barriers when it comes to leadership and participation across the board. Konica Minolta recognizes the urgent need to develop an environment that facilitates women's success in its industry.

Vision

Konica Minolta believes that employee diversity is a source of growth. The company takes measures to create an environment where women can perform to their full potential. In order to accelerate the success of its female employees, Konica Minolta does not limit itself to simply ensuring that they can keep working through various life events, but also aims to expand their access to any career path they want to pursue.

Key Measures and KPIs

- Fostering awareness and a culture supportive of diversity, with a focus on promoting participation by women
- Consider ways of supporting life events affecting both men and women, such as childbirth, child-rearing and caretaking, and consider work styles tailored to these life events
- Appointing female managers (target for fiscal 2021: Women hold 8% of all management positions)
- Raising the percentage of women among new graduate hires (target for fiscal 2020: 30% or more)

Supporting Career Development of Women

Facilitating the Success of Female Employees

For many years Konica Minolta has proactively provided equal employment opportunities for men and women, while working to build systems that can respond flexibly to the circumstances and needs of employees. These include adjusted work hours, volume, and content for employees expecting a child, or those looking after a child or family member. The company has striven to create workplace environments that make it easier for employees to remain employed while fulfilling family responsibilities. As the next step, Konica Minolta is undertaking measures to help empower female employees and allow even more women not only to remain employed but to enjoy success and career satisfaction.

Numerical Targets for Female Career Promotion

Konica Minolta, Inc. is working hard to achieve the targets of its action plan, which is based on Japan's Act on Promotion of Women's Participation and Advancement in the Workplace. The plan aims to empower more women to reach leadership positions and broaden their spheres of activity.

Target: To raise the percentage of management positions held by women to 8% in fiscal 2021.

Action Plan:

(a) Plan duration	April 1, 2020 – March 31, 2022
(b) Numerical targets	8% of management positions held by women 12% of the young assistant managers who are candidates for the next management position are women 40% or more of female managers are organizational heads
(c) Description of initiatives	<ul style="list-style-type: none"> • Selective training of manager candidates in Performance Grade 3 • Rapid advancement by enhancing training for young employees
(d) Timing of initiatives	Implemented as needed

Status of women at Konica Minolta, Inc.

Achievement of the target for 7% of managers to be women by the end of fiscal 2019 fell short at 6.8% (as of March 31, 2020). The level has continued to rise steadily every year, and the company aims to achieve the target by continuing and enhancing its measures. In fiscal 2018, Konica Minolta, Inc. appointed its first female executive officer.

Number and Percentage of Female Managers at Konica Minolta, Inc. (as of April of each year)

Initiatives to Support the Success of Female Employees

Konica Minolta, Inc. has put a number of career development programs for women in place since fiscal 2010 in order to further encourage female employees to fulfill their potential. In fiscal 2014, it implemented a program for women selected from those at the section chief level for having potential as managers and assisted them in their career development plans while also providing them with leadership training. The company also holds meetings to explain its promotion policy for female employees to the supervisors of the women chosen for this program, and it is implementing a six-month support program with mentors other than the supervisors in charge of guidance and training.

Since fiscal 2016, the company has been accelerating its initiatives by making the advancement of women part of diversity promotion, and clearly stating this in its management strategy.

Initiatives in Fiscal 2017-2019

In fiscal 2016, Konica Minolta, Inc. established a Women's Committee under the leadership of the company president, who has the ultimate responsibility for creating a foundation for full-scale promotion of female employees' advancement. As part of the committee's activities, workshops and a company-wide survey were conducted to gather feedback from all female employees and to identify the issues and conditions they face. The Corporate Diversity & Inclusion Office, headed by the president, took over the Women's Committee's activities in fiscal 2017 and has been carrying out various activities based on the three-year medium term business plan.

International Women's Day Program

In March 2018, Konica Minolta, Inc. held its first program to mark International Women's Day,* and more than 300 Konica Minolta women participated. Under a theme of "Connections," the program's aim was for women to develop comradery with diverse colleagues in the company through networking, to learn about their differences, and to find opportunities for new development and progress. The day began with a speech from Shoei Yamana, President and CEO of Konica Minolta, Inc., which was shared with four company sites in Japan via video conferencing. After that, a lecture was given by a special guest along with a workshop. The workshop allowed participants to experience the benefits of diversity that can be achieved by utilizing the strengths of each individual as part of a team. By using IT to bring together four sites in different regions and create one virtual event, the participants were all able to share the same experience, while engaging in a joint initiative with a joint sense of accomplishment.

* International Women's Day (March 8) was created by the United Nations in 1975, marking the date of a mass demonstration for a woman's right to vote that took place in New York on March 8, 1904.

International Women's Day Program

International Women's Day Initiatives Outside Japan

In fiscal 2019, senior management issued messages in Europe for International Women's Day to support female employees and build an inclusive culture. (An inclusive organizational culture is one where diverse human resources are not only present, but are also able to demonstrate their individual capabilities and play an active role.) Konica Minolta's president also appeared at an event and shared his thoughts. In the US, a Women's Day Contest was held to recognize employees who support women's career advancement. In addition, a short video was released to communicate "the positive change that gender diversity brings to the business" and messages were issued both publicly and internally. In addition, women leaders who are active on a global level also appeared in the video and shared their thoughts.

Message from the President & CEO

Company-Wide Diversity Promotion Program

In fiscal 2017, Konica Minolta, Inc. held an International Women's Day. From January to March 2019, the company built upon this through a company-wide program, "Turning Diversity into a Strength! 2018," where a total of 1,000 employees participated. Under the overall theme of "Respect (Understanding and Accepting Each Other's Differences)," workshops, panel discussions, and lectures were given on 18 occasions at six sites. Additionally, a special lecture was given and shared with 15 company sites in Japan via video conferencing.

It was an opportunity for each participant to consider differences due to gender, age and position as well as differences in people's outlook on life and their values. It also prompted them to think about how to turn that diversity into strength.

Lecture by astronaut Takao Doi
(standing, left)

Lecture for Senior Management

In order to promote a deep understanding of diversity and inclusion among executive management, the company began regularly inviting outside experts to deliver lectures in fiscal 2017. In fiscal 2018, an executive of a major firm known for its advanced initiatives was invited to give a lecture, which was attended by officers and division general managers.

Diversity Workshop for Senior Managers

Workshops were held for those in senior manager positions and above, allowing them to deepen their understanding of the importance of diversity and preparing them to further develop employees in their own organizations. Around 300 senior managers participated in a total of 12 sessions from fiscal 2017 through fiscal 2018. At the end of each workshop, the participants pledged to promote diversity in their own departments.

Diversity Workshop for
Senior Managers

Workshops for Female Staff and Managers

A career planning workshop was held to encourage individual female employees to better appreciate their own value and strengths in action, to acquire skills and abilities for developing their own career plans, and to find a path towards ongoing personal growth. A management workshop was also held for the immediate supervisors of these female staff. The purpose was to enhance the ability of these managers to provide career support to their subordinates based on an understanding of the need for diversity in human resource development.

These two workshops were jointly planned, and by having female employees and their direct supervisors attend workshops around the same time, both groups were able to share an approach for career formation and an understanding of the issues, while enhancing their commitment. The company has been holding these workshops for female employees and their direct supervisors since fiscal 2017. Around 350 employees and managers have participated over the last three years.

Diversity Advocates

Employee volunteers sign up to be diversity advocates and take the initiative to promote diversity at the frontlines in each region. Asking themselves, “What changes can we ourselves create,” these advocates think about challenges in the status quo and implement solutions. In fiscal 2018, two advocate teams were formed—in eastern and western Japan—gathering diverse members of different ages, genders, and nationalities. Each member has her or his own awareness of the issue—from experience raising children, to caring for family members, to status as a non-Japanese employee. Members engaged in lively dialogues and discussions. Workshops and consultations were also held involving employees from relevant sites, sharing information useful to all employees. In order to carry out grassroots diversity and inclusion (D&I) activities in every workplace, D&I advocates were appointed and advocate meetings were held. Along with good practices, the advocates shared information with one another on how to enhance D&I activities in the workplace.

External Evaluation

Platinum Kurumin Certification (FY2017)

Konica Minolta, Inc. was recognized by Japan's Minister of Health, Labour and Welfare as an exceptional example of a company that provides support to employees raising children.

Platinum Kurumin certification mark

Eruboshi Certification (FY2016)

As a company with an outstanding environment for promoting the role of women in the workplace, Konica Minolta was awarded the highest Eruboshi certification by Japan's Minister of Health, Labour and Welfare, under the Act on Promotion of Women's Participation and Advancement in the Workplace.

The Eruboshi certification mark

Utilizing Employee Experiences Gained Outside the Company and Abroad

- ▼ Konica Minolta's Approach ▼ Assignment of Non-Japanese Talent and Mid-Career Hires in Japan
- ▼ Providing Opportunities to Gain Experience and Knowledge Outside the Company
- ▼ Provision of Innovation Creation Places

Konica Minolta's Approach

Background and Issues

In order to connect the promotion of diversity to the creation of innovation, it is important to build a team of employees with diversity in nationality, race, gender, age, and expertise, while also having individual employees with diverse experiences and perspectives. Konica Minolta believes in generating innovation by ensuring that diverse employees share ideas based on different perspectives.

Vision

Konica Minolta actively hires people in mid-career and people from outside of Japan. In addition, employees are encouraged to gain broad experience and knowledge outside the company and venues are provided for diversely talented individuals to share ideas.

By generating innovation with these measures, the company aims to meet the needs of its global customers and to create new value that goes beyond existing concepts.

Key Measures

- Actively recruiting mid-career human resources and personnel from outside of Japan
- Providing opportunities to gain experience and knowledge outside of the company
- Promoting exchanges among employees globally and providing venues for creating innovation where diverse employees can inspire and learn from each other

Assignment of Non-Japanese Talent and Mid-Career Hires in Japan

Konica Minolta, Inc. actively hires mid-career employees to help create innovation in Japan. The company is striving to secure the diversity of its human resources by also recruiting non-Japanese new university graduates, as well as Japanese graduates with experience living abroad.

Percentage of Mid-career Hires in Fiscal 2019

- Percentage of mid-career hires among total recruitment: 40% (fiscal 2019)

Percentage of Global Human Resources Who Joined the Company in April 2020

- Percentage of non-Japanese nationals among new hires: 10% (who joined the company in April 2020)

Providing Opportunities to Gain Experience and Knowledge Outside the Company

In fiscal 2017, Konica Minolta, Inc. began encouraging employees to engage in outside projects, while also introducing a job return system, with the aim of strengthening individual diversity through experience outside the company. In fiscal 2017, it also launched an overseas dispatch program to allow young talented employees to improve themselves through friendly competition overseas at an early stage in their careers to support the establishment of their individual identities.

Through these initiatives, the company seeks to further enhance its diversity, by strengthening individual diversity and increasing the number of personnel with diverse experience and knowledge.

Encouraging Employees to Engage in Outside Projects, and Introduces a Job Return System

- › Expanding the System for Creating Innovation

Global Assignment Program for Early Career Talent

- › Human Resource Development

Provision of Innovation Creation Places

Group companies outside of Japan utilize the Technology Innovation Program to develop mechanisms to create and accelerate innovation across different business sectors and national borders.

The Technology Innovation Program began in 2015 in the EU, and now every year more than 50 members from over 10 countries meet to discuss new business opportunities, spending 10% of their time over a 6-month period on developing products, platforms or services to address real business challenges.

This program was also launched in 2019 in the Asia-Pacific region, where it aims to accelerate new innovation.

Employment of People with Disabilities

Special Subsidiary “Konica Minolta With You, Inc.” Promotes Employment of People with Disabilities

In September 2013, Konica Minolta established the special subsidiary Konica Minolta With You, Inc. to support the independence of persons with disabilities through employment. The “With You” in the company name expresses the intention that the company is not just doing something for persons with disabilities but rather that it works with them to enhance their participation in society. Through this subsidiary, Konica Minolta is pursuing the social independence and mainstreaming of persons with disabilities.

In order for employees to feel pride and satisfaction through their work, Konica Minolta With You, Inc. enables its new hires to experience a variety of jobs during the first three years after joining the company, and helps them to create a long-term career vision with goals to achieve within five years. In this way, the company supports career development for people with disabilities, with the aim of maximizing their professional skills. Employees engage in a variety of duties including printing business cards and pamphlets, digitizing documents, data entry, and serving customers at a café and shop and on site.

In FY 2019, the company established an Engineering Group as a new initiative. It contributes to the business by cleaning Konica Minolta MFPs used by customers, performing image adjustments and other maintenance, as well as refurbishing and maintaining unit components for large digital printing machines.

At the Good Career Company Awards 2019, sponsored by Japan’s Ministry of Health, Labour and Welfare, Konica Minolta With You, Inc. was recognized with an Innovation Award (Human Resources Development Bureau Director-General Award).

Corporate Governance

Basic Views

Konica Minolta, Inc. has established a corporate governance framework from the standpoint of supervision. This is based on the conviction that corporate governance that contributes to medium- and long-term corporate value growth must encourage suitable risk-taking in business operations and have a highly effective supervisory function for business operations. In 2003, the “company with committees” structure (currently “company with three committees”) was selected as the organizational structure in accordance with Japan’s Companies Act. In addition, the company has taken steps to ensure its governance system is objective and not overly influenced by personalities, while still operating the system in a distinctive Konica Minolta style.

Corporate Governance System

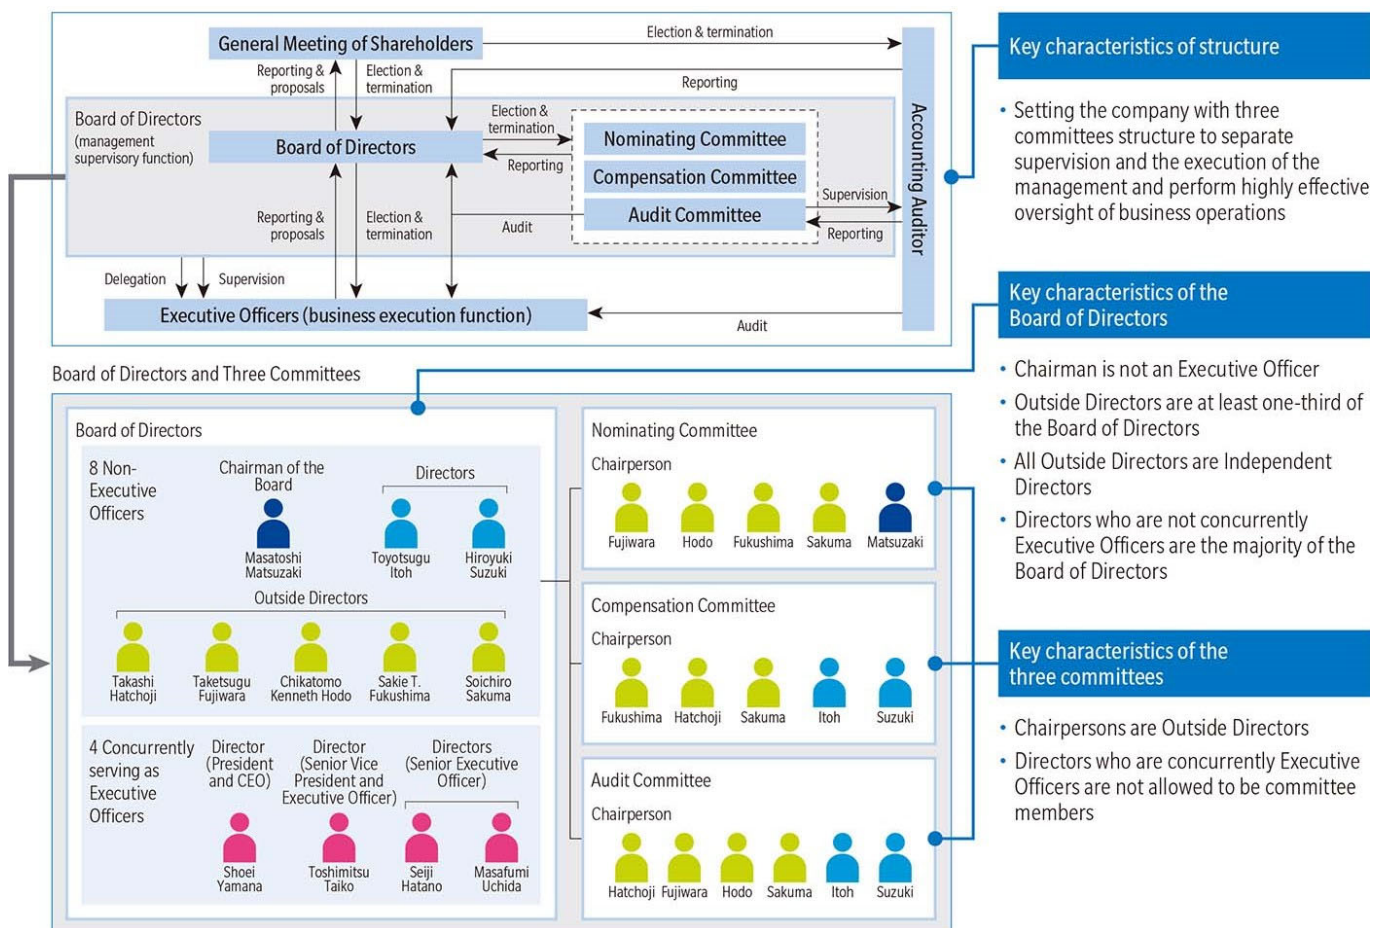

Basic views with regard to governance system

Basic Views

The company's basic views with regard to its governance system are as follows.

- Ensuring management oversight for corporate value growth by separating the roles of management oversight and operation of business activities
- Election of independent outside directors who can perform supervision from the standpoint of shareholders
- Using these measures for improving the transparency, integrity and efficiency of management

Structure of Corporate Governance Systems (As of June 30, 2020)

Detail of Corporate Governance System

Board of Directors

Since the company is a company with three committees, the Board of Directors delegates to executive officers as much authority as allowed by laws and regulations for making operational decisions. This contributes to the speed and flexibility of managing business operations.

The Board of Directors makes decisions solely about items, such as fundamental management policies, that can be determined only by the directors, according to laws and regulations. In addition, the Board of Directors makes decisions about investments larger than a certain amount and such other items that will have a significant impact on the Konica Minolta Group.

In addition, the Board of Directors enhances sustainable growth and corporate value for the Group by ensuring management oversight.

Executive Officers

The executive officers are responsible for deciding how to perform the operations delegated by Board of Director resolutions, and then executing those operations.

In addition, based on substantial delegation of authority by the Board of Directors, the executive officers work to accelerate decision-making in business execution.

Nominating Committee

The Nominating Committee decides the content of proposals for director appointment and dismissal to be submitted to the General Meeting of Shareholders. It also receives reports concerning succession planning (candidate training and selection) from the President and CEO, as necessary, and supervises the process.

Audit Committee

The Audit Committee reviews the execution of duties by directors and executive officers, prepares audit reports, and decides the content of proposals for appointment, dismissal, and non-reappointment of accounting auditors to be submitted to the General Meeting of Shareholders.

Compensation Committee

The Compensation Committee decides the details of individual compensation, bonuses, and other benefits received from the company as consideration for duties performed by the directors and executive officers.

Operations of the Board of Directors

Operation

As a general rule, the Board of Directors meets once each month. Before each meeting, the directors are expected to make themselves familiar with the proposed resolutions, and materials are distributed to outside directors in advance so that effective discussions can be held on the day of the meeting. In addition, before important management decisions are made, the executive officer responsible sometimes gives a preliminary explanation concerning the matter at hand.

The seating position of the directors is changed at every meeting, except for that of the chairman and the president, and other such measures are taken to further enhance communication among the directors and ensure that the meetings are dynamic.

Attendance

The meeting results and attendance rates for the Board of Directors and the three committees at the end of fiscal 2019 were as follows.

Furthermore, the attendance rate at Board of Directors and the three committee meetings for the five outside directors (Kimikazu Noumi, Takashi Hatchoji, Taketsugu Fujiwara, Chikatomo Hodo, and Sakie T. Fukushima) was 100%.

Note: All members of the Board of Directors are required to attend more than 80% of the meetings. In order to achieve this attendance rate, the number of companies which they can serve as directors (officers under Japan's Companies Act) is restricted to no more than three in principle.

	Board of Directors	Nominating Committee	Audit Committee	Compensation Committee	Total
Number of meetings	12	6	13	7	38
Attendance rates for all directors (%)	100	100	100	100	100
Attendance rates for outside directors (%)	100	100	100	100	100

Activities of the Board of Directors and the Three Committees in Fiscal 2019

1. Board of Directors

Fiscal 2019 was the final year of Medium Term Business Plan SHINKA 2019, and a review of the progress made on each business strategy and key measure has been monitored in each business domain: foundational, growth, and new. Deliberations aimed at formulation of the next medium-term business plan were also conducted.

2. Nominating Committee

As indicated in the "Policy and procedure for nomination of director candidates" and the "Reasons for selecting candidates for director," the Nominating Committee nominated director candidates. It also received reports regarding the president and CEO's plan for selecting a successor and continuously supervised this.

3. Audit Committee

The Audit Committee audited the legality and propriety of management decision made by directors and executive officers, confirmed the facts of improper conduct as well as violations of the law or articles of incorporation, and monitored and verified the internal control system that has been established and put into operation. It also rigorously reviewed whether an independent position was maintained in the external accounting auditor's audit and whether a proper audit was conducted.

4. Compensation Committee

The Compensation Committee confirmed the appropriateness of compensation systems and levels ahead of the determining of compensation for individual director. It also discussed and settled partial revisions of the fiscal 2020 compensation policy, and director compensation scheme.

Support System for Outside Directors

1. At the time of appointment, each outside director is provided with information including the company overview, business content, organizational structures and personnel, the Medium-Term Management Plan, the budget and the corporate governance of the company.
2. After appointment, outside directors receive information about each business area of the company, such as its position in the whole company business portfolio, composition of the company's business portfolio, the company's position in each industry field and business environments. Outside directors also conduct frontline inspections in departments such as development, production, sales, and service in each business area, and they receive the latest information from the responsible executive officers.
3. A Board of Directors Office has been established as the secretariat for the Board of Directors, Nominating Committee, and Compensation Committee, while the Audit Committee Office serves as the secretariat for the Audit Committee. The staff members of these offices support the outside directors to enable the Board of Directors and committees to function properly. Members of this office also distribute the document in advance concerning agenda items to outside directors, and create proposals and plans for visits to company facilities and accompany outside directors as needed as part of activities to these directors. The objectives are to enable outside directors to thoroughly discuss subjects at the Board of Directors meetings and to ensure that these meetings take place with no difficulties.

Training of Directors

In accordance with the director election standards, the Nominating Committee selects candidates for election as director who have the qualities needed to be a director. The company confirms whether new directors require training judging from each individual's knowledge, experience and other characteristics. If training is needed, the company provides suitable opportunities to receive this training.

1. For new independent outside directors, the company provides information about the group's structure, business activities and finances as well as information about the medium term business plan and its progress and other subjects. These new directors also receive basic information about the company's businesses and corporate-level functions.
2. For independent outside directors, the company arranges visits to the development, manufacturing, sales, service and other operations of every business unit. The executive officer of each business unit provides the directors with the latest information about that business.
Activities in fiscal 2019:
 - (1) Inspection tours in Japan (factories and sales offices, including at subsidiaries)
Two tours with the cumulative participation of three outside directors
 - (2) Inspection tours outside Japan (factories and sales offices, including at subsidiaries)
One tour with the cumulative participation of two outside directors
 - (3) In-house announcement events for each business (Value Creation Forum)
In-house announcement events business (Value Creation Forum) in four business areas with participation of seven outside directors
 - (4) Executive officer conference (strategy discussion, issue review)
Held once with five outside directors participating as observers
 - (5) External exhibitions
Two external exhibitions with the participation of a total of three outside directors
3. New inside directors are provided opportunities to attend governance training held by external institutions, and information about various seminars is given to inside and outside directors as opportunities to participate when appropriate.

Feedback on Board of Directors Effectiveness

In 2003, the company became a company with committees (now a company with three committees). To determine if the corporate governance system is functioning as intended, the company started performing self-assessments in 2004 concerning the Board of Directors' effectiveness. Self-assessments have been performed every year since then in order to make improvements.

In fiscal 2016, an external organization was commissioned to conduct a questionnaire and interviews with the intention of enhancing objectivity by including the perspective of a third party and clarifying issues that were not noticed in conventional self-assessments.

The company now has a PDCA cycle that covers assessments and the analysis of results, the establishment of policies for the operation of the Board of Directors in the next fiscal year, and the creation and implementation of a plan for the board's operations. PDCA is used, while reviewing the content of the self-assessment questionnaire annually, as a tool for continuous improvements in the effectiveness of the Board of Directors.

In fiscal 2019, the company aimed to return to the basics and understand the actual response status and issues related to each principle of the Corporate Governance Code (CG Code), in order to confirm whether the company's corporate governance is suited to its goal: the achievement of sustainable growth and increases in corporate value over the medium to long term.

Policy and Procedures for Appointing Director Candidates, and the Applicable Approaches and Standards, etc

Policy and Procedures for Appointing Director Candidates

The Nominating Committee starts each year by performing reviews of the composition of the Board of Directors and committees and of the standards for the selection of directors and committee members. By performing examinations from the standpoints of balance of career and skill, diversity and other factors, this committee aims to upgrade its selections of director candidates. The following process is used to make selections.

1.Board of Directors

- (1) The Nominating Committee examines the objectives of the composition of the board and then confirms a proposal for the total number of directors, the number of outside directors, and the number of inside directors who do and do not concurrently serve as executive officers.
- (2) Confirmation of directors who will resign due to standards for the number of years as a director or age, and expected number of new outside director and new inside director candidates.

* Use the link below for detailed information.
[Approach to the Overall Board of Directors Composition](#)

2.Outside Directors

- (1) To select outside director candidates, after the Nominating Committee confirms the selection process, the requirements (necessary careers and skills) for the new outside directors are determined, considering the combination with the outside directors to be re-appointed, in order to ensure that the company will obtain useful supervision and advice on operational issues. Based on these considerations, the Nominating Committee chairperson asks for a broad range of recommendations for candidates, based on information from Nominating Committee members, other outside directors and the president and CEO. To provide reference information, the Board of Directors Office distributes to Nominating Committee members a candidate database, centered on "chairperson" of excellent companies, which includes information about independence, age, concurrent positions and other characteristics of candidates.
- (2) From the candidates recommended through the preceding process, the Nominating Committee uses the following steps to narrow down the number of candidates and establish an order of priority.
 - Selection standards for directors
 - Standard for independence of outside directors
 - Balance of career and skill required for outside director candidates and diversity
- (3) Using the order of priority for candidates, the Nominating Committee chairperson and Chairman of the Board of Directors visit and approach the candidates to serve as an outside director.

3. Inside Directors

- (1) Candidates for inside director are jointly proposed with the Nominating Committee following discussions between the Chairman of the Board of Directors and the president and CEO concerning proposed candidates for non-executive directors and directors who concurrently serve as executive officers based on the president and CEO sharing his plan for the executive system for the next fiscal year with the Chairman of the Board of Directors, with emphasis placed on the following points.
- Selection standards for directors
 - Roles of directors who do and do not concurrently serve as executive officers
 - Required skills, experience and other characteristics of directors who do and do not concurrently serve as executive officers
- (2) The Nominating Committee uses the draft proposals to examine the candidates.

The Applicable Approaches and Standards for Appointing Director Candidates

1. Board of Directors

(1) Approach to the Overall Board of Directors Composition

The Board of Directors is composed of a number of directors within the scope provided in the Articles of Incorporation, taking into account the management issues the Board of Directors is required to address.

- 1) To ensure management transparency and supervisory objectivity, oversight of management, it is required one-third or more of the directors be independent outside directors, and directors who do not concurrently serve as executive officers constitute the majority of the total number of directors.
- 2) To enhance the management supervision function, liaise with the independent outside directors and strengthen communication and cooperation with executive officers, more than one inside directors not concurrently serving as executive officers will be appointed.
- 3) To further enhance deliberations on important decisions from a management standpoint, in addition to the president and CEO, several executive officers in charge of principal duties will be appointed as directors.
- 4) The Nominating, Audit and Compensation committees are all chaired by outside directors to ensure transparency and objectivity. In addition, to ensure that each committee adequately fulfills its respective roles, each committee is composed of around five members, and a majority of its members is independent outside directors.
- 5) Concerning the size of the Board of Directors, the company considers 10 or 12 directors to be the appropriate number from the standpoint of ensuring the proper composition of the board with respect to inside directors who do not concurrently serve as executive officers, inside directors who concurrently serve as executive officers, and outside directors.
- 6) For more information about the diversity of the Board of Directors, see "Balance of career and skill required for outside director candidates and diversity."

(2) Selection Standards for Directors

The Nominating Committee has selected candidates who satisfy the following standards as being suitable directors for achieving good corporate governance, i.e., ensuring the transparency, soundness and efficiency of the company's operations.

- 1) Good physical and mental health
- 2) A person that is well liked, dignified, and ethical
- 3) Completely law-abiding
- 4) In addition to having objective decision-making abilities for management, the person must have good foresight and insight
- 5) Someone with no potential conflict of interest or outside business relations that may affect management decisions in the company's main business areas, and who has either organizational management experience in the business, academic, or governmental sectors or specialized knowledge in technology, accounting, law, or other fields.
- 6) For outside directors, a candidate with a history of performance and insight in their field, someone with sufficient time to fulfill the duties of a director, and who has the ability to execute required duties as a member of the three relevant committees.
- 7) The Nominating Committee has separately set points for consideration in the re-election of directors and requirements concerning the number of terms of office, age and other factors. Especially, in principle, existing terms of office for outside directors are up to four years.
- 8) In addition, the candidate must have the abilities necessary for a director to run and build a public corporation that is transparent, sound, and efficient.

2. Outside Directors

(1) Criteria on the Independence of Outside Directors

The following types of people are ineligible to serve as outside directors at Konica Minolta. Our Nomination Committee selects outside director candidates with a high level of independence, provided that none of the following criteria apply.

- 1) Person affiliated with Konica Minolta
 - Former employee of the Konica Minolta Group
 - Having a family member (spouse, child, or any blood or marital relative twice removed or less) that has served as a director, executive officer, auditor or top manager in the Konica Minolta Group during the past five years.
- 2) Person affiliated with a major supplier/client
 - Currently serving as a managing director, executive officer, or employee of a major supplier/client company/group that receives 2% or more of its consolidated sales from the Konica Minolta Group or vice versa.
- 3) Specialized service provider (lawyer, accountant, tax accountant, patent lawyer, judicial scrivener, or a consultant for management, finance, technology, or marketing)
 - Specialized service provider that received annual compensation of ¥5 million or more from the Konica Minolta Group during the past two years.
- 4) Other
 - A shareholder holding more than 10% of the voting rights in the company (executive directors, executives, or employees in the case of a corporate body)
 - A director taking part in a director exchange
 - A director, executive officer, auditor or equivalent position-holder of a company that competes with the Konica Minolta Group, or someone holding 3% or more of the shares of a competing company (who is not eligible to be a director of any kind)
 - Having some other conflict of interest with the Konica Minolta Group

The Company, under the rules of the Nominating Committee, in principle, limits the period in office of outside directors to four years (reappointment limit). This rule is based on the concern that the objectivity of these Directors may decline as the length of time in office increases.

(2) Balance of Career and Skill Required for Outside Director Candidates and Diversity.

- 1) To ensure the diversity of directors, the Nominating Committee Rules for selection standards for directors state that candidates should "have experience operating an organization in the industrial, government or academic sector or have specialized skills involving technologies, accounting, law or other fields" and "have accomplishments and knowledge in their respective fields suitable for outside director candidates."
- 2) Candidates should have the character, skill and experience needed for strengthening and upgrading management in order to enable the Board of Directors to determine the company's strategic direction.
- 3) Based on a full understanding of the importance of gender and international diversity, a career and skill matrix is prepared for each outside director candidate for reelection or election as a new director. The matrix includes the business sector, major management experience, fields of expertise and other characteristics of each candidate to provide information about the diversity of their careers and skills. The objective is to select candidates who can provide useful oversight and advice during discussions of management issues by the Board of Directors.
- 4) Outside director candidates are not excluded from consideration on the basis of their gender, nationality, country of birth, cultural background, race, or ethnicity.
- 5) In selecting new outside director candidates for appointment at the General Meeting of Shareholders in 2020, the above-mentioned points of view were given. The candidates selected have abundant experience in management, legal, and internal control system of the manufacturing industry, and who could be expected to provide useful oversight and advice.

* **The following principle from the Corporate Governance Code (version revised on June 1, 2018) was explained.**

Reason for non-compliance with [Principle4-11 Preconditions for Board of Directors and *Kansayaku* Board Effectiveness] **Regarding diversity, including gender and international aspects, and appropriate size**

The company has paid due heed to "the board should be well balanced in knowledge, experience and skills in order to fulfill its roles and responsibilities," and "it should be constituted in a manner to achieve both diversity and appropriate size," as stipulated in the principle. However, while consideration of diversity naturally took into account gender and nationality, it was not realistic to commit to forming a Board of Directors that definitely realized the gender and nationality aspects while still achieving an appropriate size. In order to secure the effectiveness of the Board of Directors, the company considers the credentials of a director to be more important than their demographic characteristics.

(3) Expected Roles of Outside Directors.

- 1) To participate in important decisions made by the Board of Directors and supervise the decision-making process
- 2) To submit advice about the establishment of management policies and plans and about reports concerning business operations by using their experience and knowledge
- 3) To oversee conflicts of interest among the company, its shareholders, senior executives and others
- 4) To supervise management to protect ordinary shareholders and to reflect the interests of shareholders from the standpoint of ordinary shareholders, which is independent from senior executives and special stakeholders
- 5) To supervise management as members of the Nominating, Audit and Compensation Committees

3. Inside Directors

(1) Stance Concerning Roles of Inside Directors and Selection of Candidates.

- 1) The chairman of the Board of Directors calls meetings of the board and chairs the meetings. In addition, the chairman is responsible for overseeing improvements in the effectiveness of corporate governance. The chairman ensures that agenda items are handled in a manner that facilitates constructive discussions in an open and unrestricted manner. The chairman also asks questions and takes other actions from the standpoint of providing oversight and ideas and suggestions. Furthermore, based on assessments of the effectiveness of the board, the chairman establishes policies for the board's operations and explains these policies at the board meeting following ordinary general meeting of shareholders.

The company's previous president and CEO has been selected to serve as chairman in order to have a chairman who has a thorough knowledge of the company's management and can provide highly effective oversight of management. The company's Basic Policy on Corporate Governance and Corporate Organization Basic Regulations require that the chairman shall be a director who does not concurrently serve as executive officer, whether the individual is an outside or inside director.

- 2) An inside director who is not concurrently an executive officer and who has the ability to ensure the quality of audits is selected as a full-time Audit Committee member.

The inside director who serves as a full-time Audit Committee member should have extensive management experience as an executive officer of the company in order to improve the effectiveness of the Audit Committee. The qualifications required in particular are experience in accounting and finance or business management and core business management.

This inside director also serves as the Nominating Committee member and Compensation Committee member.

- 3) Inside directors who are concurrently executive officers, other than the president and CEO, are selected based on their experience, capabilities and character. They are held accountable for their execution and contribute to energetic and meaningful discussions at Board of Directors meetings. Requirements for these inside directors include responsibility for overseeing major elements of the company's operations such as strategic planning, accounting and finance, technology, as well as for overseeing main business operations in the company.

Executive System and Appointment of Executive Officers

Executive System

1. Under a mandate from the Board of Directors, executive officers make decisions about operations and then execute them. The business execution is overseen by the Board of Directors and reviewed by the Audit Committee to ensure the efficiency, adequacy, legality and soundness of management.
2. Executive officers are appointed by the Board of Directors, which selects the president and CEO, selects senior executive officers from among the executive officers, and establishes a division of duties among the officers. The executive officers, including the president and CEO, make decisions concerning the execution of duties delegated by the Board of Directors, and execute their duties.

Selection or Dismissals of Executive Officers

1. The Board of Directors uses a fair, timely and appropriate method to select people who have the capabilities to serve as executive officers. These individuals must be able to create new value for the Group and earn the support of internal and external stakeholders. Standards for making these judgments about capabilities are defined in “Standards for the Selection of Executive Officers.”

Individuals must have the ability and experience for the internal and external management of the Group's business operations. Qualification standards also take into consideration knowledge about specialized fields and technologies, an individual's age when the time for renewing the appointment comes, and other items. In addition, the Board of Directors selects individuals with a strong commitment to ethics, the ability to put customers first, the ability to drive innovation, strong motivation to achieve goals, and other such characteristics.

2. To select new executive officers, candidates who have completed senior executive candidate training must pass through the first stage of the selection process, which involves submitting documents and completing an interview. Next, an assessment is performed in order to reach a highly objective and appropriate decision. This process includes input from both an external perspective and from the perspective of people at the Group who frequently interact with these candidates as part of their jobs. An evaluation conference, which consists of the president and CEO and the executive officer responsible for personnel, is held to examine the results of this process. This results in the selection of candidates to become executive officers.
3. To determine the new team of executive officers, the president and CEO selects from the list of executive officer candidates the individuals believed to be well suited to serve as executive officers. Next, a proposal for the selection of executive officers for the new fiscal year is prepared and submitted to the Board of Directors, with a list of the duties for each executive officer.
4. Prior to the submission of this proposal to the Board of Directors, the Nominating Committee performs oversight of the whole process, including a confirmation that a suitable process was used. Oversight includes receiving the proposal for the new executive officer team (including the proposed new executive officer selections from the president and CEO) and a report about the proposed duties of each executive officer.
5. The Nominating Committee considers observing the character of executive officer candidates is an important matter and utilizes opportunities such as attending meetings of the Board of Directors and reporting to informal gatherings of directors. After receiving the proposal for the selection of executive officers mentioned above from the president and CEO, the Nominating Committee discusses the content of the proposal, creates a summary of its conclusions regarding matters such as the appropriateness of candidates and training issues, and provides these as feedback to the president and CEO.
6. The Board of Directors takes the “Standards for the Selection of Executive Officers” into full consideration when deciding whether or not to dismiss an executive officer.

Compensation for Directors and Executive Officers

The company, which has adopted the company-with-three-committees system, has established a Compensation Committee. Outside directors account for the majority of members of the committee and the committee is chaired by an outside director to ensure transparency and to determine compensation in a fair and appropriate manner. The company's directors' compensation system is intended to strengthen the motivation of directors and executive officers to strive for the continuous medium-to-long-term improvement of the Group's performance in line with management policies, to meet shareholder expectations and contribute to the optimization of the Group's value. The company aims for a level of compensation that enables it to attract and retain talented people to take responsibility for the company's development.

In keeping with these aims, the Compensation Committee has established a policy for determining the individual compensation entitlement of directors and executive officers, and determines the amount of individual compensation entitlement of directors and executive officers in line with this policy.

At Compensation Committee meetings held on March 24, 2020 and May 25, 2020, the members resolved to partially revise the policy for determining individual compensation for directors and executive officers, starting in fiscal 2020. [Click here for the details of the revision.](#)

Compensation Policy

1. Compensation system (see diagram below)
 - 1) Compensation packages for directors (excluding directors who concurrently hold executive officer posts) exclude a short-term performance-based cash bonus because directors have a supervisory role, and consist of a base salary and stock compensation. The stock compensation consists of a medium-term stock bonus (non-performance-linked) and a long-term bonus.
Only a role-specific base salary is provided to outside directors.
 - 2) Compensation packages for executive officers consist of a base salary, an annual performance-based cash bonus, which reflects the performance of the Group, as well as stock compensation. The stock compensation consists of a medium-term stock bonus (performance-linked) and a long-term stock bonus.
2. The total amount of individual compensation entitlement and base salary are set at an appropriate level, taking into account position and value of the job, by considering value based upon objective data, evaluation data and other data collected at regular intervals.
3. The amount of the annual performance-based cash bonus is determined based on the level of performance delivered for the fiscal year (consolidated operating profit), the degree of attainment of annual performance targets, and the progress of each executive officer's key operational measures. The amount based on the degree of attainment of annual performance targets is determined in the 0% to 200% range of the standard amount of compensation. The targets are major consolidated performance indicators (operating profit, operating profit ratio, operating cash flow, and KMCC-ROIC*) associated with results of operations. Executive officers' key operational measures include those related to non-financial indicators, such as environment, society and governance (ESG) performance.
 - * Return on invested capital is used for calculating the annual performance-based cash bonus, and the invested capital represents the assets that can be individually managed and grown by each business division.
4. Stock bonus plan
 - 1) In the medium-term stock bonus (non-performance-linked) plan for directors, the company's shares are distributed to directors upon the conclusion of the Medium Term Business Plan, according to their roles and years in office. The plan is designed to enhance directors' motivation to contribute to medium-term shareholder value improvement and to promote their ownership of the company's shares.
 - 2) In the medium-term stock bonus (performance-linked) plan for executive officers, the company's shares are distributed to executive officers upon the conclusion of the Medium Term Business Plan in the 0% to 200% range. The plan is designed to enhance their incentives for attaining the targets of the Medium Term Business Plan and promote their ownership of the company's shares. The medium-term targets are major consolidated performance indicators (operating profit, operating cash flow, and ROIC) associated with the medium term management policy.
 - 3) The long-term stock bonus for directors (internal directors not also serving as executive officers) and executive officers is awarded in the form of Konica Minolta shares after the retirement of the officer concerned, and is based on the person's position or role and their tenure. The aim of this compensation is to enhance motivation and to contribute to long-term shareholder value improvement.
 - 4) The standard number of shares is set according to the position each director or executive officer held in the first year of the Medium Term Business Plan.
 - 5) Certain portions of shares are distributed in cash on the assumption that they are exchanged for cash.
 - 6) Shares of the company obtained as stock bonus shall be held in principle for one (1) year after the date of retirement from the post of each director or executive officer.
5. The standard for compensation of the president and chief executive officer is a 50:25:25 mix of a base salary, an annual performance-based cash bonus, and a medium term performance-based stock bonus. For the other executive officers, the base salary ratio is set higher than that for the president.
In addition, the ratio of the medium-term stock bonus (performance-linked) and long-term bonuses within the stock compensation shall be 60:40.
6. Compensation for non-residents of Japan may be handled in different ways from the above-mentioned treatment above due to legal and other circumstances.

7. If the Board of Directors must resolve a correction to financial statements after they are announced due to a material accounting error or fraud, the Compensation Committee shall consider corrections to performance-based bonuses and limit payment or request return of the bonuses when necessary.
8. The company reviews levels, composition and other elements of compensation in a timely and proper manner in accordance with changes in the management environment.

The previous retirement compensation, which was discontinued in June 2005, was determined by the Compensation Committee for each individual officer concerned within a range set by Konica Minolta's own standards. This will continue to be paid whenever a director and an executive officer who has been serving since before June 2005 retires.

Compensation System Diagram

Directors	Inside	Base Salary	Medium-term stock bonus (Non-performance-linked)	Long-term stock bonus	
	Outside	Base Salary			
Executive Officers	President	Base Salary 50%	Annual performance-based cash bonus 25%	Medium-term stock bonus (Performance-linked) 15%	Long-term stock bonus 10%
	Senior Managing Executive Officers, Senior Executive Officers, Executive Officers	Base Salary 51%~55%	Annual performance-based cash bonus 29%~25%	Medium-term stock bonus (Performance-linked) 12%	Long-term stock bonus 8%

Indicators for Performance-based Bonuses, Reasons for the Selection of These Indicators, and Method for Determining the Amount of Performance-based Bonuses

As mentioned above, at meetings held on March 24, 2020 and May 25, 2020, the Compensation Committee decided to partially revise the policy for determining individual compensation for directors and executive officers. As part of this, the performance-based compensation indicators were also revised, along with the reasons for indicator selection, and the methods for determining amounts of performance-based compensation.

1. Annual performance-based cash bonus

(1) Indicators and the reasons for the selection of these indicators

Item	Portion according to performance level	Portion according to attainment of performance targets				Portion according to personal appraisal	
Assessment index and others	Operating profit	Corporate Divisions / Core Business Divisions				New Business Divisions	Reflects progress of each executive officer's key measures
		Operating profit	Operating profit ratio	Operating cash flow	KMCC-ROIC		
	25%	25%	25%	25%			
	Linked with Group consolidated performance result level	Linked with annual performance target attainment rate			Linked with individual target attainment rate		

Note: The corporate divisions include the management affairs divisions of Konica Minolta, Inc. and those with group-wide horizontal functions.

(2) Indicators for performance-based bonuses, reasons for the selection of these indicators

- 1) The indicator for the level of performance results portion is the amount of Group consolidated operating profit. It was judged that operating profit is the most appropriate indicator for determining the responsibility for performance that should be taken on by executive officers with the aim of realizing sustainable growth and enhanced corporate value by achieving higher levels of operating profit.
- 2) For officers in charge of corporate divisions and core business divisions, the indicators used for determining the attainment of performance targets are operating profit, operating profit margin, operating cash flow and KMCC-ROIC. These indicators are designed to promote a strong awareness of Konica Minolta's sustainable growth and corporate value improvement over the medium to long term. Operating profit was selected to help enhance the earning power of core businesses, while operating margin was chosen to promote a shift to high profitability. Likewise, operating cash flow helps to implement strategy in a timely and appropriate manner and secure dividend resources, while KMCC-ROIC is necessary to help improve invested capital efficiency. In addition, each indicator is given the same weighting (25%). In the case of new business divisions, individual targets are used as indicators, by setting targets for each business division in accordance with the business characteristics and priority measures for the year.
- 3) For the portion according to personal appraisal, factors such as progress of each executive officer's key operational measures are used as indicators. Matters are evaluated from a different perspective from the level of performance results portion and the portion according to attainment of performance targets.

(3) Methods for determining the amount of compensation

- 1) The amount paid for the level of performance results portion is calculated by multiplying a value determined according to the amount of Group consolidated operating profit by a number of points set for each position. Said value is decided in accordance with a table formulated in advance.
- 2) For officers in charge of corporate divisions and core business divisions, the performance attainment portion is calculated by multiplying the annual performance attainment rate (calculated using the weightings of each indicator) by the standard amount for each position. The consolidated performance of the relevant business is applied for an executive officer in charge of a core business division, while the consolidated Group performance is applied for an executive officer in charge of a corporate division.
In addition, the amount to be paid for an executive officer in charge of a new business division is calculated by multiplying the individual performance attainment rate for the relevant business division by the standard amount for the role.
The payment rate will vary from 0% to 200% depending on the attainment level.
(This increase in the upper limit (previously 150%) is designed to further enhance officer awareness of target attainment, by making the relationship between target attainment and payment more pronounced.)
- 3) The amount paid for the portion according to personal appraisal is calculated by multiplying the total of the standard amounts determined for the level of performance results portion and portion according to attainment of performance targets by an appraisal value (value in the range of -30% to +30%) for each executive officer stipulated in a proposal drafted by the president and CEO.
- 4) The payment amounts in the three items listed above will be discussed and settled by the Compensation Committee.

2. Medium-term stock bonus (performance-linked)

(1) Indicators and the reasons for the selection of these indicators

Item	Medium-term stock bonus (performance-linked)		
Assessment index	Group consolidated operating profit	Group consolidated operating cash flow	Group consolidated ROIC
	(Cumulative total for 3 years from FY2020 to FY2022)		(3 year average from FY2020 to FY2022)
	40%	30%	30%
	Linked with attainment rate of medium term business plan targets		

(2) Indicators and the reasons for the selection of these indicators

Operating profit, operating cash flow and ROIC (group-wide consolidated) are used as indicators in order to promote sustainable growth for Konica Minolta and improve corporate value over the medium to long term. Operating profit was selected as an indicator to help strengthen the earning power of the core businesses, while operating cash flow was chosen to promote timely and appropriate strategy implementation, and to secure resources for dividends. ROIC was selected to improve the efficiency of invested capital over the medium to long term. The weightings are 40%, 30% and 30%, respectively.

(3) Methods for determining the amount of compensation

1) Compensation is calculated by first taking the total of three values: an amount obtained by multiplying the cumulative operating profit target attainment rate for the medium-term business plan period by 40%, an amount obtained by multiplying the cumulative operating cash flow target attainment rate for the same period by 30%, and an amount obtained by multiplying the average ROIC target attainment rate for the same period by 30%. This total is then multiplied by a number of points set per position accumulated over the same period, with one point equaling one share that will be transferred as compensation.

The payment rate will vary from 0% to 200% depending on the attainment level.

(This increase in the upper limit (previously 150%) is designed to further enhance officer awareness of target attainment, by making the relationship between target attainment and payment more pronounced.)

2) Points set per position is calculated by dividing the amount of resources allocated per position by a reference stock price.

3) The reference stock price is the average price paid (weighted average) by the trustee entrusted by the company, the trustor, when purchasing the number of shares in the company required to pay the stock bonus on the stock market.

4) The number of shares transferred listed above will be discussed and settled by the Compensation Committee

Activities of the Compensation Committee

Month	Attendance	Main agenda items ◆: Resolution adopted ◇: Deliberated ○: Reported
May 2019	All 6 attended	◆ Financial compensation linked to fiscal year performance of executive officers in FY2018 ◆ Points for individual directors / executive officers for FY2018 stock compensation
June 2019	All 5 attended	◆ Chairperson selection ◆ Compensation Committee's FY2019 policy and plan ◆ Individual compensation for directors and executive officers starting July 2019 (annual base salary)
Sept. 2019	All 5 attended	○ Listing of issues to be investigated regarding officer compensation scheme ◇ Handling of standards for calculation of compensation linked to fiscal-year financial performance
Nov. 2019	All 5 attended	○ Executive compensation survey report
Feb. 2020	All 5 attended	◇ Investigation of executive officer compensation for FY2020
Feb. 2020	All 5 attended	◇ Direction of executive compensation levels for FY2020 ◇ Investigation issues relating to the director and executive officer compensation scheme ◇ Revision of the compensation determination policy
March 2020	All 5 attended	◆ Compensation for individual executive officers in FY2020 (annual base salary) ○ Handling of standards for calculation of compensation linked to fiscal-year financial performance ◆ Partial revision of the director and executive officer compensation scheme and revision of the related compensation determination policies and regulations
May 2020	All 5 attended	○ Voluntary return of director and executive officer compensation
May 2020	All 5 attended	◆ FY2019 performance-based executive compensation ◆ Numbers of shares awarded to individual directors / executive officers as stock compensation ◆ Partial revision of the stock compensation scheme and revision of the related compensation determination policies and regulations

Amount of Compensation Paid to Directors and Executive Officers for the Year Ended March 2020

(Unit: 1 million yen)

		Total	Total base salary		Performance-linked compensation		Stock bonus	
			Persons	Amount	Persons	Amount	Persons	Amount
Directors	Outside	63	6	63	-	-	-	-
	Inside	159	4	127	-	-	4	31
	Total	222	10	190	-	-	4	31
Executive officers		615	24	525	24	55	24	34

Notes

- The numbers above include one outside director and one inside director who stepped down as of the date of the 115th Shareholders' Meeting held on June 18, 2019. At the end of the period (March 31, 2020), the company has five outside directors, three inside directors (not concurrently holding executive officer posts) and 24 executive officers.
- In addition to the four inside directors shown above, the company has another four inside directors who concurrently hold executive officer posts, and the compensation to these directors is included in compensation to executive officers. Also, with respect to the one person who stepped down from an executive officer position and became a director as of the date of the 115th Shareholders' Meeting, this person's presence and compensation as an executive officer and director are split and included in the respective categories.
- Regarding the performance-linked compensation, the amounts which were recorded as expense in the period are stated.
- Regarding the stock-based compensation, the amounts shown are those to be recorded as expenses in the fiscal year concerned, based on calculation of the expected amount of compensation including future granting of the company's shares, in accordance with the expected number of points granted to Directors (excluding outside directors) and executive officers.

Total Compensation for Those Individuals with a Total Compensation of 100 million Yen or More in the Fiscal Year Ended March 2020

(Unit: 1 million yen)

Position / Name	Company type	Total	Total base salary	Performance-linked compensation*2	Stock bonus
Executive Officers Richard K. Taylor*1	Consolidated subsidiary Konica Minolta Business Solutions U.S.A., Inc.	147	91	56	-

Notes

- Executive Officer Richard K. Taylor is the CEO of the consolidated subsidiary, Konica Minolta Business Solutions U.S.A., Inc.
- Regarding performance-linked compensation, the amounts to be expensed in this fiscal year are given.
- Based on Article 6 of the policy for determining the individual compensation entitlement of directors and executive officers described in "Compensation for Directors and Executive Officers" above, executive officer Richard K. Taylor is not covered by the stock compensation plan.

Guidelines on Officer Ownership of Konica Minolta Shares

In order to further raise awareness of shareholders' expectations for performance improvement and growth in the stock price, a stock bonus linked to medium-term performance (for executive officers) and a medium-term stock bonus (for directors) have been introduced. Accordingly, Stock Ownership Guidelines have also been established for inside directors and executive officers.

Group Auditing System

Creating a System That Aims for Effective Audits

Konica Minolta Inc., which has adopted the company-with-committees system, has established an Audit Committee, while its subsidiaries in Japan have appointed their own respective auditors. In addition, Konica Minolta Inc., has a Corporate Audit Division, which conducts an internal audit of the entire Group.

The members of the Audit Committee and the Corporate Audit Division, as well as auditors of the subsidiaries in Japan, share related information and strengthen the coordination of audit activities across the Group. With the aim of ensuring effective audits, the same parties hold regular meetings with the accounting auditors, review auditing systems and policies, and examine whether or not the accounting auditors can fulfill their tasks properly.

Audit Committee System and Roles

The Audit Committee is comprised of six directors (who do not hold positions as executive officers), four of whom are outside directors. The chairperson of the Audit Committee is selected from among the outside directors. To ensure effective operation of the committee, it has established its own office (Audit Committee Office) with staff members who are independent of any sections committed to actual business operations. The Audit Committee members evaluate the legality and validity of the management decisions made by directors and executive officers, monitor and validate internal control systems, and assess the adequacy of the accounting auditors. In principle, a committee meeting is held before the meeting of the Board of Directors, so that the committee members can present their opinions to the meeting of the Board of Directors, if deemed appropriate.

Corporate Audit Division Systems and Role

The Corporate Audit Division of Konica Minolta Inc., which directly reports to the president and CEO, is responsible for the Group-wide internal audit and performs internal audits of Konica Minolta and its subsidiaries, as well as major overseas affiliated companies. Using the risk-assessment approach, the division evaluates these companies in terms of the reliability of their financial statements, efficiency, and validity of their businesses and the level of their legal compliance. The division also conducts follow-up audits in which it examines improvement measures taken by respective companies in response to suggestions provided by internal auditors.

In addition, major subsidiaries have their own internal audit divisions which work closely with the Corporate Audit Division of Konica Minolta Inc., and enhance the internal audit function of the entire Group.

Internal Controls

Internal Control Measures

Board of Directors adopts resolution adopted to establish internal control system

In recent years, corporate scandals and lack of compliance have become matters of social concern. To prevent misconduct, management needs to implement stronger internal control system. Japan's Company Law obliges companies to construct internal control system.

Every year, Konica Minolta, Inc. reviews the company's internal control system in March, and the Board of Directors then renews its resolution to maintain the internal control system. An outline of the recent resolution and the operational status of internal control system was published in the business report for the fiscal year ended March 2020. Konica Minolta continues to strive to ensure the legality, rationality, and efficiency of its business activities by reviewing, as occasion demands, its systems and rules of supervision, and operations pertaining to all business across the Group.

Complying with Japan's Financial Instruments and Exchange Law

Conducting an internal assessment of consolidated Group subsidiaries around the world

The Japanese Financial Instruments and Exchange Law (JSOX) was adopted during the fiscal year ended March 2009 in order to prevent corporate accounting fraud and ensure the reliability of financial reporting.

Konica Minolta, Inc. conducts an internal assessment of 132 companies including its consolidated group subsidiaries both in and outside Japan and prepares its internal control report. The report undergoes an internal control audit by external auditors and then is submitted together with the Japanese Annual Securities Report (fiscal year ended March 31, 2020).

Risk Management

Basic Concept

Creating a Group-wide risk management system

Along with the globalization of economies and the transformation of societies, the risks faced by companies have become more diverse. Konica Minolta has created a Group-wide risk management system in order to clarify various corporate risks and to minimize their impact on its businesses. The Group also conducts business continuity management, taking measures to ensure that businesses are able to continue uninterrupted in the case of a natural disaster or other unforeseen circumstances.

Risk Management System

Konica Minolta, Inc. has established a management system in which the President and CEO is responsible for risk management and crisis management. In April 2010, the company strengthened its system for assessing a range of possible risks without serious omissions and developing full countermeasures. A system was also established for reporting and issuing instructions during a crisis.

Building a Risk Management System

Making executive officers responsible for managing various risks.

The executive officers are responsible for managing various risks including strategic risks, financial risks, risks pertinent to environmental regulations and hazard risks. They identify and evaluate risks and develop and monitor countermeasures in their respective spheres of management. In addition, the Risk Management Committee, chaired by an executive officer appointed by the Board of Directors, is convened periodically (twice a year). The Committee examines the risks identified by each executive officer, as well as the countermeasures in place, and checks to ensure that the risk management system is functioning effectively, making revisions where necessary. The Group responds as a whole to risks judged to be particularly important, led by an executive officer appointed by the chairperson. The activities of the Risk Management Committee are periodically reported to the Audit Committee.

Risk Information

Matters concerning the business and financial status of the Konica Minolta Group that are likely to have a material impact on the decision of investors. Matters relating to the future referenced are Group determinations based on the current business environment.

Building a Crisis Management System

Establishing a system for minimizing the business and social impact of crises

Konica Minolta has established a system for minimizing the business and social impact of crises that may arise from a range of risks by taking prompt and appropriate action and by releasing information. The Crisis Management Committee, chaired by the executive officer for crisis management appointed by the Board of Directors, discusses and formulates crisis countermeasures and procedures for action. Furthermore, the emergency contact system has been enhanced to enable the President and CEO, in addition to the executive officer for crisis management, to assess the situation and make decisions quickly. A system has also been established to enable the President and CEO to take leadership in critical areas in a crisis.

Factors and Examples of Crisis Risks (excerpts)

	Factors	Examples
1	Defective products, recalls, product liability lawsuits	Design errors (faulty products, health hazards), errors in manufacturing processes (faulty products, foreign substances contained in products), etc.
2	Defective services	Inappropriate explanations, discriminatory attitudes toward customers, etc.
3	Personnel-related problems	Ambiguous performance evaluation standards, unfair transfers, human rights infringements such as employment discrimination and harassment, crimes/scandals involving employees, etc.
4	Labor-related problems	Labor disputes, unfair labor practices, child labor, forced labor, occupational health hazards, employee deaths or suicides caused by overwork, etc.
5	Corporate negligence	Pollution (soil, wastewater, odors), industrial accidents (health and safety hazards, accidents), etc.
6	Company's unethical conduct	Contacts with anti-social forces, scandals, internal disputes, insider trading, etc.
7	Inappropriate decision-making on management and marketing	Risks involved in investments, loans, bonds, M&A, and transactions; excessive competition, etc.
8	Corporate crimes	Illegal acts (violations of Antimonopoly Act, Premiums and Representation Act, Subcontract Act, Tax and Commercial Laws, etc.)
9	Intimidation and other crimes committed against the company	Obstruction of business (inserting foreign substances in products, etc.), robbery, subversive activities, etc.
10	Economic and social disturbances	Oil crises, major power failures, sharp declines in stock prices, etc.
11	International/political upheavals	War, coups, trade conflicts, etc.
12	Disasters and epidemics	Earthquakes, storms and floods, fires, epidemics (SARS, avian influenza, and new type of influenza, etc.)
13	Rumors concerning management instability	Incorrect information in mass media, spreading rumors through various channels, including the Internet, etc.

Business Continuity Management (BCM)

Establishing measures for business continuity in the event of a major natural disaster

One of the most important responsibilities of an enterprise is to maintain or rapidly resume its essential business operations in the event of a major disaster or accident. Konica Minolta is working toward this goal at Group companies worldwide, as well as in its supply chains.*

At Konica Minolta, each business division and subsidiary, including the Business Technologies Business, which is Konica Minolta's core business, and Medical Devices, for which there is a high need during disasters, formulates a business continuity plan (BCP), laying out a specific plan of action for such an event. The Group has also established an initial response system to decide the necessity of putting the BCP into action by gathering information such as the damage situation immediately after a disaster.

Specifically, in the event of a major earthquake in Japan, the basic policy is to keep supplying consumables and products as much as possible so as to not inconvenience customers, while continuing to provide support services to existing customers. Toward that end, the Group is striving to increase the level of its business continuity system by decentralizing production sites for primary consumables, conducting risk assessments on suppliers, and securing alternatives and inventory for key parts with big risk. In addition, a backup structure has been established for call centers in Eastern and Western Japan so that they can provide backup to each other. This enables the company to continue to provide customer support even if one center were affected by a disaster. The Group also works on preparing responses in case of new strains of flu for which there are concerns about a global outbreak. Further, various drills are conducted to increase the quality of these kinds of BCM.

* Supply chain: The series of activities involved in delivering a product or service to a customer, ranging from procurement and production to distribution and sales.

Reinforcing Crisis Response and BCM

The Group's major sites escaped severe damage in the Great East Japan Earthquake that struck on March 11, 2011, and the BCP did not have to be implemented. However, for the first month after the disaster, the president of Konica Minolta, Inc. held an Earthquake Response Meeting every morning to gather information, give appropriate instructions, and ensure consistent information disclosure. Since then, the Group has taken measures to improve its preparedness for front-line action in the event of a major disaster that occurs without warning.

Specifically, the initial response manual at all Group sites was revised so that operations would reliably continue during periods of chaos, at night and on holidays. The effectiveness of the manual was tested with actual drills, and the PDCA cycle is being used to improve it further.

In the event of a large-scale earthquake, the headquarters in the Marunouchi area of Chiyoda, Tokyo would serve as the Disaster Response Headquarters. Seven teams, headed by the President and CEO, would promptly respond. This system is reviewed in Group disaster preparedness training held once a year. In this training, the Disaster Response Headquarters, including top management, works with a site chosen as the hypothetical epicenter to quickly ascertain the extent of the damage, decide on a response and make decisions. In November 2019, training was carried out for a scenario involving the occurrence of a quake directly hitting the Tokyo metropolitan area.

Konica Minolta has also developed its own information-sharing tools for use in disasters. Its Emergency Information Data Base System is able to map the extent of damage at sites in the Konica Minolta Group in Japan, thereby providing an overall picture of the damage. The Safety Confirmation System consolidates information on the safety of employees and their families. Konica Minolta also uses internal social media as an information-sharing tool for use in emergencies that occur at night or on holidays. Employing disaster prevention ICT, these tools support a smooth response from the initial response stage through the BCP stage. When the earthquake occurred in northern Osaka in June 2018, the Group used these ICT tools and confirmed that they were effective for information-sharing in the initial stage.

Also, based on Tokyo Metropolitan Government regulations that went into force in April 2013, the Group has been improving its disaster prevention equipment and strengthening its measures for persons having difficulty returning home.

In January 2020, as the novel coronavirus began to spread, Konica Minolta established a crisis management system focused on production sites in China and initiated a group-wide response. As infections continued to spread in February and March, the response scope was expanded to include European and North American sales and production companies, as well as sites in Japan. Measures have been implemented to provide employee and business continuity support.

Group disaster preparedness training

Communication with Shareholders and Investors

Basic Concept

Promoting information disclosure actively based on the Charter of Corporate Behavior.

Konica Minolta believes that maximizing its corporate value is part of meeting the expectations of its shareholders and investors. In order to maintain close relations with these stakeholders, Konica Minolta is working to ensure that they have a good understanding of all the Group's activities. This is achieved through proactive investor relations (IR) efforts in accordance with the concept of fair and timely disclosure of corporate information, as stated in the Konica Minolta Group Charter of Corporate Behavior.

Active deployment of investor relations activities

Actively engaging in IR activities for institutional and individual investors

Every quarter, Konica Minolta holds results briefings for securities analysts and institutional investors. Individual interviews and meetings are also held after these briefings, as necessary, to provide follow-up information. Konica Minolta also visits institutional investors and actively participates in investor conferences held by brokerages, both in Japan and overseas, in an ongoing effort to communicate directly with investors.

In recent years, ESG investment, which considers corporate approaches to the environment, society, and governance in addition to financial performance, has been rapidly growing. Konica Minolta proactively disseminates information in response to the interests of such investors.

Implementation Status of Various Briefings (FY2019)

Financial Results Briefing Session	Every quarter (Tokyo)
Investor Conference/roadshow	Seven meetings (3 in Tokyo, 1 in the United States, 2 in Europe, and 1 in Singapore)
Private Investor Briefings (IR Department response)	One meeting (Tokyo) Participants: 160
Private Investor Briefings (Senior executive officer in charge of investor relations)	One meeting (Tokyo) Participants: 200
Small meetings (Representative Executive Officer President and CEO)	Four meetings Securities analysts and institutional investors: 25 participants
Corporate governance meetings (Chairman of the Board and outside directors)	Two meetings (participant: 1 securities analyst, and 26 institutional investors)
Business presentation	Two meetings For securities analysts, institutional investors and the media ✓ Joint briefing session for Office, Performance materials, and Measuring Instruments segments (participants: 23 securities analysts, 31 institutional investors, and 2 reporters/others) ✓ Bio-healthcare study group (participants: 17 securities analysts and 26 institutional investors)
Small meetings for ESG (Senior Executive Officer and executives)	One meeting (sustainable growth initiatives) Participant: 10 institutional investors, and 1 securities analyst
Individual meetings	A total of some 400 meetings (200 companies)

IR Activities by Top Management

Konica Minolta's top management is actively involved in dialogues with analysts and large institutional investors both in and outside Japan, and the disclosing of information.

Fiscal 2019 marked the final year of the Medium Term Business Plan SHINKA 2019, and the results of new businesses and core/growth businesses promoted as part of Konica Minolta's TRANSFORM strategy were examined. However, it turned out to be a tough year due to internal factors such as difficulty in reducing manufacturing costs as planned. Challenging external factors included an economic slump in Europe that has continued since the second half of fiscal 2018, as well as U.S.-China trade friction and the resulting economic slowdown in those two countries.

Against this backdrop of environmental changes, Konica Minolta has been expanding opportunities to communicate directly with investors, such as briefing sessions and small meetings that the President and CEO himself briefs, as well as individual conversations with investors worldwide. The communication has covered measures to be achieved by fiscal 2020 and for the establishment of a strong management foundation, as well as the company's medium and long-term perspectives and approaches to its business and industry environments. Konica Minolta has been promoting strategies for business transformation based on these efforts.

The executive officer has also been actively engaged in dialogue and information sharing concerning Konica Minolta's management foundation, including intangible assets to grow sustainably. While the Chairman of the Board and an outside director have held governance meetings, the executive officers in charge of each business segment have also held briefings. They explained environmental initiatives and efforts to develop their business segments using the company's common core technologies and customer asset strengths.

Each year, a growing number of investors are taking non-financial information into consideration, including environmental, social and governance (ESG) activities, when making investment decisions. Therefore, it has become increasingly important for senior management, including representative executives, to directly communicate with investors and share information with them. Under the next medium-term business plan to be announced in fiscal 2020, Konica Minolta will continue to increase opportunities for both executives and representative executives to engage in direct investor dialogues worldwide, while promoting briefings and tours. The aim is for investors to be able to better understand and support Konica Minolta's sustainable growth, which is vital to society.

Strengthening the Dissemination of Information

In fiscal 2019, Konica Minolta continued to enhance the sharing of relevant information with investors through its IR website and Integrated Report. These efforts have been applauded by external organizations.

With the revamping the IR website in March 2018, the aim has been to continually provide information to shareholders and investors that is easy to understand. As a result, the site ranked first last year among listed companies in the Gomez IR Website Ranking, winning the gold medal for the seventh consecutive year. Subsequently, the Nikko IR Website Enhancement Ranking recognized it as the best website for the ninth consecutive year. Thus, the Konica Minolta IR website has continued to receive high praise from these major evaluation organizations.

In recent years, the source of corporate value has shifted from tangible to intangible assets, and non-financial information has become increasingly important, especially to the investment decisions of medium and long-term investors. There is also a growing number of indices for ESG investing and investors are moving toward the incorporation ESG information into investment decisions. Accordingly, an ESG page was added to Konica Minolta's IR website to enhance the sharing of its non-financial information.

The Integrated Report 2019 has once again been well received by external stakeholders. This is thanks to efforts such as enhanced disclosure and sharing of non-financial information, including intangible assets such as human resources and intellectual property, as well as disclosure based on the framework created by the Task Force on Climate-related Financial Disclosures (TCFD). The company's information sharing is promoted using a consistent story of value creation with reference to the Guidance for Collaborative Value Creation issued by Japan's Ministry of Economy, Trade and Industry. Konica Minolta won the Excellence in Integrated Reporting Prize for the second consecutive year at the 2019 WICI Japan Award for Excellence in Integrated Reporting. For the third consecutive year, the company was also recognized for having an excellent integrated report by external asset managers of Japan's Government Pension Investment Fund (GPIF).

Communication with Shareholders and Investors

Committed to fair and timely information disclosure and proactive dissemination of information

In order to ensure fair and timely disclosure of IR information, Konica Minolta has an investor relations section on the Group's website which is updated regularly with the latest information. Available in Japanese and English, the site provides results information, financial data, and other materials. After every quarterly results announcement, videos of briefings, briefing materials with comments, and the main Q&A content are released on the website.

Corporate Governance Report

The June 2015 adoption of a Corporate Governance Code has resulted in greater emphasis being placed on corporate governance initiatives. The company's views on corporate governance, which it has worked on actively since the early days of management integration, were compiled into a Corporate Governance Report and disclosed on the Japanese and English websites.

- › [Corporate Governance Report \(English\)](#)

Measures to Vitalize the General Shareholder Meetings and Smooth Exercise of Voting Rights.

Early Notification of General Shareholder Meeting

The Company sends the convocation notices at least three weeks in advance of the scheduled date of the General Shareholder Meeting to shareholders in order to enable them to have sufficient time to deliberate on the proposed Agenda of Items. Simultaneously, the convocation notices and its English translation is posted on the Company's website.

Scheduling AGMs to Avoid the Peak Day

The meeting is scheduled to avoid the peak day so that as many shareholders as possible can attend.

Allowing Electronic Exercise of Voting Rights

Shareholder can exercise voting rights via the Internet by accessing the website for exercising voting rights designated by the Company through a personal computer, smartphone or cellular phone.

Japanese and overseas institutional investors can vote by using ICJ's electronic voting platform. However, pre-registration is required for the use of the platform.

Participation in Electronic Voting Platform

The Company posts convocation notices and its English translation on ICJ's electronic voting platform. Japanese and overseas institutional investors who have pre-registered for the use of the platform can directly access the contents of the convocation notices for deliberation, thus enhancing their convenience.

Providing Convocation Notice in English

As explained above, the Company posts English translations of convocation notices on the website. In addition, English translations of convocation notices are also placed on the electronic voting platform.

Compliance

Basic Concept

Promoting compliance, including corporate ethics and internal corporate rules

Compliance as Konica Minolta understands it is not simply obeying the laws of Japan and other countries, but also includes adherence to corporate ethics and internal corporate rules in consideration of the expectations of society; it is given top priority in all corporate activities. The Konica Minolta Group Charter of Corporate Behavior was created with this understanding. This charter, which is fundamental to Group governance, gives the principles that guide compliance for the entire Group. Moreover, in an effort to ensure thorough compliance, the Konica Minolta Group Guidance on the Charter of Corporate Behavior, which shows specific expected behaviors, was published in 2011 as a reference for employees of all Group companies worldwide to consult when implementing the Charter.

Konica Minolta is also building a system to help executive officers and employees of each Group company to practice compliance in their daily activities, while striving to foster a shared sense of value and create a corporate culture that fosters the compliance demanded by society.

Konica Minolta will continue to practice compliance on a global, group-wide scale, while taking into consideration differences in laws, cultures and customs found in various countries and regions.

Group Compliance Promotion System

Building a system to promote consistent compliance Group-wide

At Konica Minolta, the Chief Compliance Officer, who is appointed by the Board of Directors, determines important matters for the promotion of the Group’s compliance and is responsible for promoting and overseeing compliance activities such as anti-corruption measures and personal information protection. The Chief Compliance Officer reports directly to the President and CEO of Konica Minolta, Inc., who has ultimate responsibility for Group compliance. To fulfill that responsibility, the Chief Compliance Officer convenes the Group Compliance Committee, which is composed of officers responsible for compliance from corporate departments in charge of Group-wide functions.

To promote compliance in each department at Konica Minolta, Inc., the General Manager of each department serves as the official responsible for compliance; at subsidiaries inside and outside Japan, the president of each subsidiary serves as the official responsible for promoting compliance at each company. The Chief Compliance Officer reports regularly to the Audit Committee regarding the progress of compliance activities and important compliance issues in the Group.

Global Group Support System

Strengthening the coordination of Group compliance

The Legal Division at Konica Minolta, Inc. drafts plans to address important matters and measures regarding the promotion of the Group's compliance, serving as a Group compliance support office assisting the Chief Compliance Officer. The Legal Division also assists each department and subsidiary with compliance activities, directly and indirectly, and provides support for group-wide information management.

The Chief Compliance Officer also appoints regional compliance coordinators in Europe, North America, China, and Southeast Asia, tasking them with implementing activities to promote compliance, considering the circumstances of each region.

In fiscal 2019, the Group compliance support office and regional compliance coordinators worked together to help newly acquired companies inside and outside Japan as well as small Group companies to adopt compliance measures, seeking to instill compliance throughout the entire Konica Minolta Group.

Planning Compliance Promotion and Verifying Progress

All departments at Konica Minolta, Inc. and all of its Group companies are required to carry out compliance according to a group compliance promotion plan and report their progress.

Konica Minolta identifies material issues by looking at trends in social expectations and the results of compliance risk assessments, and prepares a medium-term compliance promotion plan. Furthermore, based on the medium-term plan, a group compliance promotion plan is prepared for each fiscal year, and each department and group company is required to implement measures accordingly. In fiscal 2019, each department, including subsidiaries under their management, formulated their own plans and implemented measures that take into consideration compliance risks in their respective business domains.

The officials responsible for compliance in each department at Konica Minolta, Inc., and at each group company inside Japan are required to submit monthly reports on the progress of their measures, as well as any compliance issues in that department or company, to the Chief Compliance Officer. The officials responsible for compliance at each Group company outside Japan must do likewise on a quarterly basis. When a compliance issue arises which may cause a violation against Konica Minolta Group Charter of Corporate Behavior, it must be reported to the Chief Compliance Officer immediately.

Based on these reports submitted to the Chief Compliance Officer, the Group compliance support office and regional compliance coordinators cooperate as needed to conduct activities that support the promotion of compliance Group-wide. Any remaining issues are reflected in the compliance promotion plan for the following year.

The Corporate Audit Division, which reports directly to the President, conducts internal audits of Konica Minolta, Inc. and its worldwide subsidiaries. The audits also look at compliance, and detailed checks are made to ensure that measures are being implemented according to the annual plans of target group companies, and to confirm that the system to ensure thorough compliance is functioning properly. When an issue is identified, a corrective plan is prepared and implemented with the assistance of the Group compliance support office and the relevant regional compliance coordinator. Progress is then verified through follow-up audits.

There were no significant violations involving bribe, fraud, embezzlement, or any other area of the Konica Minolta Group Charter of Corporate Behavior which warrant disclosure in fiscal 2019.

Internal Hotline Systems(Helpline)

Building and improving hotlines at each Group company

In the Konica Minolta Group in Japan, the Group-wide helpline is available so that employees can use it to seek consultation and directly contact the president, Chief Compliance Officer, general manager of the Legal Division, or an outside lawyer via various channels such as telephone and email, when they become aware of any conduct that poses a risk of non-compliance.

On August 9, 2019, Konica Minolta became one of the registered businesses for declaration of conformity with the whistleblowing compliance management system certification (declaration of conformity registration system) under the jurisdiction of the Japan's Consumer Affairs Agency.

The government system was introduced in 2019 to promote appropriate development and management of whistleblowing systems.

Konica Minolta has also established internal hotlines outside Japan. Konica Minolta Business Solutions U.S.A., Inc., an office equipment and solutions sales company in the U.S., has a Whistleblower's Hotline, which has served as an internal reporting system for its employees in North America, including its subsidiaries in Canada and Mexico. In Europe, the Integrity Hotline has served as a 24-hour, multi-lingual reporting system for all Group employees in Europe. Furthermore, the Group expanded its internal hotline systems in 2015. In China, an internal hotline system using an outside lawyer as a receiver of reports was established for all Group companies in China (excluding companies in Hong Kong). Konica Minolta Business Solutions Asia Pte. Ltd. in Singapore continued to establish internal hotlines for Group companies in Southeast Asia. In addition, measures to raise awareness of internal hotline systems were taken again at subsidiaries in and outside Japan, in order to increase their accessibility.

These hotlines can be contacted and consulted anonymously. In addition, the whistleblowers do not suffer any negative repercussions for having contacted or consulted the hotlines.

The content of a hotline report in each case is kept confidential and investigated in detail. In the event of a compliance issue, the main department for the hotline system works in cooperation with the relevant departments to correct the problem and prevent any recurrence. The Chief Compliance Officer reports information on the records of the internal hotline systems to the Audit Committee regularly.

In fiscal 2019, there were 32 reports to the internal hotlines in Japan and 47 reports to the overseas hotlines. 19 of these reports in Japan and 24 of these overseas were regarding human right issues (power harassment/sexual harassment/discrimination /improper treatment).

There were no significant incidents reported from these internal hotlines that warrant disclosure either inside or outside Japan in fiscal 2019.

Disseminating the Group Charter of Corporate Behavior

Making the Konica Minolta Group Charter of Corporate Behavior Handbook available via intranet in ten languages

Konica Minolta has established the Konica Minolta Group Charter of Corporate Behavior, and all directors and employees of group companies in different countries and regions are required to follow it. To make sure all the employees around the world can correctly understand the Charter and put it into practice, a PDF version of the Charter in ten different languages (Japanese, English, Chinese, German, French, Spanish, Portuguese, Italian, Russian, and Korean) has been made available on the Group's intranet.

Konica Minolta Group Charter of Corporate Behavior

▶ [Konica Minolta Group Charter of Corporate Behavior](#)

 [Konica Minolta Group Charter of Corporate Behavior\(PDF:325KB, in ten languages\)](#)

Submitting Written Compliance Pledge by Officers and Employees

Konica Minolta has implemented a measure whereby officers and employees of Group companies pledge that they will give top priority to compliance in their conduct, with an understanding of the Konica Minolta Group Charter of Corporate Behavior, the Konica Minolta Group Charter of Corporate Behavior Handbook, the Compliance Promotion Declaration by the presidents of subsidiaries, and the significance of and how to use internal helpline systems. Since 2009, Konica Minolta has required the officers and managers of Group companies in Japan to submit a written compliance pledge. In 2018, that requirement was expanded to include the officers and employees of all Group companies worldwide. In this way, the Group requires annual reaffirmation that its people will behave with propriety and social responsibility and that they will understand and thoroughly adhere to compliance requirements.

As of March 31, 2019, a compliance pledge has been received from 100% of the officers and employees in Japan, contributing to higher compliance awareness within the Group.

Issuance of the Compliance Promotion Declaration by the Presidents of subsidiaries in and outside Japan

Newly appointed presidents of subsidiaries in and outside Japan prepared a declaration based on the Compliance Promotion Declaration made by the president and CEO of Konica Minolta, Inc. in April 2017. The companies use every opportunity to promote awareness of this document among employees of subsidiaries.

Guidance for the Charter of Corporate Behavior and Compliance Manuals Prepared for Each Region

In April 2011, the company published the Konica Minolta Group Guidance for the Charter of Corporate Behavior for all Group companies worldwide, as a reference for individual employees when implementing the Charter.

The Guidance states practices employees should follow, based on a common understanding of the items in the Charter. It also contains specific requirements concerning human rights and anti-corruption measures, which are stated as the principles of the United Nations Global Compact, joined by Konica Minolta in 2008.

Employees worldwide are required to follow their own Group company compliance manuals and codes of conduct, which are aligned with the social ethics and laws of their respective countries, using the Guidance as a base. In 2016, the Compliance Manual (in Japanese), which clearly explains all items in the Guidance and provides specific examples, was revised to ensure alignment with Japan's current laws and social ethics. It was distributed to all employees in Japan, including at subsidiaries, in an easy-to-read pamphlet. In fiscal 2017, the company also revised the China-specific version of the Compliance Manual (in Chinese and Japanese) to comply with the country's latest laws and regulations and evolving social ethics. The manual was distributed to all employees in China. Other subsidiaries post codes of conduct and compliance manuals produced based on the Konica Minolta Group Charter of Corporate Behavior to their intranets to disseminate their contents.

 [Konica Minolta Group Guidance for Charter of Corporate Behavior\(PDF:445KB\)](#)

Compliance Education

Conducting a broad range of compliance education in and outside Japan

Konica Minolta, Inc. provides its employees at each level with various educational programs on compliance. Programs are conducted every year for new hires, mid-career employees, mid-level employees, new managers, and new executives. Various seminars on laws and regulations are held annually for employees of all Group companies in Japan. In fiscal 2019, seminars were held on the Corrupt Practices Act, the Antimonopoly Act, the Subcontract Act, the Act on the Protection of Personal Information, the EU's General Data Protection Regulation (GDPR), and security export control. Education to prevent workplace harassment was also provided. Each business division and Group company in Japan also conducts compliance education with characteristics suited to their respective business environments. The Healthcare Business Division, for example, conducts annual education on corruption prevention and transparency guidelines.

At Group companies outside Japan, the regional compliance coordinators formulate an annual compliance education plan and systematically conduct their own legal and compliance education based on each country's laws. Group companies in North America provide business ethics education to all employees through e-learning every year. Group companies in Europe systematically conduct risk workshops carried out with employee participation that combine compliance risk assessments with education on corruption prevention law and antitrust law. In China, seminars on corruption prevention and accounting fraud are held for managers of all subsidiaries.

In fiscal 2019, the company also held compliance seminars for the newly appointed presidents of Group companies; this has been done since fiscal 2015 in and outside Japan. Through these education programs, Konica Minolta ensures that top management of subsidiaries develops a high sense of ethics and promotes compliance. Also in fiscal 2019, tailor-made (interactive) refresher training was held for presidents of Group companies worldwide who have been in their position for at least three years. The aim was to further promote compliance.

Since fiscal 2017, the Group has held executive compliance seminars for executive managers in Japan and Europe, which is progressively expanded to sites worldwide.

Putting Compliance into Practice

- ▾ Practicing Compliance Based on the Charter of Corporate Behavior
- ▾ Compliance with Antitrust Laws
- ▾ Tax Policy
- ▾ Anti-Corruption Initiatives
- ▾ Export Control for International Peace and Security
- ▾ Advertising Activities

Practicing Compliance Based on the Charter of Corporate Behavior

Based on the Konica Minolta Group Charter of Corporate Behavior, the company conducts a comprehensive risk assessment every six months to identify compliance-related risks such as corruption (bribery, improper payoffs, conflicts of interest, etc.), antitrust law violations (private monopoly, unfair trade practices, unfair restraint of trade, etc.), and violations of the Act on the Protection of Personal Information. These risks are reported to the Risk Management Committee, and are then identified as important compliance issues. Then the issues identified are addressed as priorities.

- [Konica Minolta Group Charter of Corporate Behavior](#)

Anti-Corruption Initiatives

Implementing global anti-corruption measures focusing on areas with high corruption risk

Along with economic globalization, the need for anti-corruption measures has increased, and relevant regulations are being strengthened not only within Japan, but also for international commercial transactions. The guidelines for preventing corruption are set forth under Section 2, "Fair and Transparent Corporate Activities," in the Konica Minolta Group Guidance for the Charter of Corporate Behavior. They include a prohibition on extorting gifts and entertainment, a prohibition on soliciting or accepting bribes, and a ban on any contact with organized criminal elements.

Every year, the Konica Minolta Group prioritizes compliance with antitrust laws and preventing corruption in its annually renewed compliance promotion plan, considering the expectations of society, the degree of impact on the company and society and the possibility of occurrence. In fiscal 2019, the Group used a worldwide compliance promotion system to continue to educate its personnel on these two priority issues, in line with the relevant laws, business environments, and customary practices. The compliance issues, risks, and progress of education in each region are regularly reported to the Chief Compliance Officer via compliance reports. In fiscal 2018, the anti-corruption guidelines for personnel in Japan were revised in response to changes in public expectations, and efforts were made to ensure that the new guidelines are thoroughly understood. In fiscal 2019, new guidelines were prepared for personnel in other countries and regions as well, in accordance with their respective laws and cultures, and expanded to worldwide.

As part of the company's comprehensive anti-corruption efforts, in fiscal 2019 standards and rules were created concerning the provision of gifts and entertainment to clients. They were prepared by referring to the country rankings in the annual Corruption Perceptions Index (CPI) reported by Transparency International (TI), and are applicable to Konica Minolta organizations operating in countries where the risk of corruption is high. Systems for accounting monitoring and checking have also been established and deployed at each subsidiary, and reports are sent every quarter to the compliance department.

There were no incidents regarding bribery or corruption in fiscal 2019.

Compliance with Antitrust Laws

Formulating antitrust law policy and undertaking education in accordance with the laws and business environment in each region

Konica Minolta recognizes that when violations of an antitrust law occur, the impact on companies, the economy and society is extremely serious. Section 2, "Fair and Transparent Corporate Activities," in the Konica Minolta Group Guidance for the Charter of Corporate Behavior stipulates requirements for compliance with antitrust laws in relevant countries and regions, and for fairness and transparency in transactions between companies. Antitrust law measures have again been designated as a Konica Minolta group-wide priority in the Group's fiscal 2019 compliance promotion plan. The Group compliance support office and the regional compliance coordinators have taken the lead in providing education to relevant employees at Konica Minolta, Inc. and its subsidiaries worldwide, in line with the laws and business environment in each region.

This initiative will be continued in the future. Reports on the progress of compliance promotion are regularly submitted to the Chief Compliance Officer, including the status of education on antitrust law measures, as well as antitrust law issues and risks.

In fiscal 2019, it is suspected that there was 1 violation of antitrust law, as indicated by authorities outside Japan. The company is currently investigating the details to address this issue.

Export Control for International Peace and Security

Practicing strict export control to maintain international peace and security

Today there is heightened concern over the proliferation of weapons of mass destruction and terrorist attacks. Accordingly, as a member of the international community, the government of Japan participates in international treaties and regimes such as the Nuclear Nonproliferation Treaty and the Wassenaar Arrangement and has reflected their rules to be observed in Japan's Foreign Exchange and Foreign Trade Control Law. This law regulates the trade not only of weapons, but also of goods and technology that could be used to produce weapons. It specifies that companies are required: (1) to determine whether or not it is an advanced technology or goods that could be used for weaponry as listed under international agreements (technical classification); and (2) to check the users and the intended use for any risk of its being used for the development or manufacture of weapons of mass destruction (transaction screening).

Konica Minolta has established an Export Control Code for Security Purposes and created an export control system in group companies in Japan, and it carries out strict technical classification of products and transaction screening to ensure adherence to the Foreign Exchange and Foreign Trade Control Law. In addition, Konica Minolta systematically provides security export control training to employees and conducts internal audits on security export control operations.

Tax Policy

Konica Minolta has established a group-wide tax policy.

The Konica Minolta Group Tax Policy has been established in order to contribute to the development of local communities by ensuring that we properly fulfill the duty to pay taxes related to our business operations.

 [Konica Minolta Group Tax Policy \(204KB\)](#)

Advertising Activities

Konica Minolta has established the Konica Minolta Group Charter of Corporate Behavior as its global standard for the disclosure of useful and reliable information.

In its advertising, Konica Minolta gives first priority to compliance with the relevant laws and industrial regulations in each region of the world. Beyond the basic laws, the company endeavors to conduct fair and proper advertising, taking into account the voluntary restrictions and advertising standards that apply in each of its business fields, as well as respecting public morality and the viewpoints of stakeholders.

For example, laws and standards that the company observes in Japan include regulations governing advertisements such as the Act against Unjustifiable Premiums and Misleading Representations, the Standards for the Representation of Copiers and Multi-Function Printers of the Japan Business Machine and Information System Industries Association, the Code of Ethical Practice of the Japan Advertisers Association, and screening standards for various media.

In fiscal 2019, there were no infractions of the Act against Unjustifiable Premiums and Misleading Representations.

Human Rights

- ▼ Basic Concept ▼ Human Rights Assessment in the Supply Chain of Existing Businesses
- ▼ Employee Human Rights Assessment ▼ Respect for Human Rights and Elimination of Discrimination
- ▼ Harassment Prevention ▼ Motivating Treatment ▼ Labor-Management Relations
 - Advance Notification of Personnel Transfers

Basic Concept

Human rights are universally valued rights that all people are born with. In today's world, there is a growing awareness that businesses can have a great impact on human rights.

In order for a company to be vital to society, it must recognize the diverse expectations of society and deliver on them through its business activities.

As a company with a globally growing business, Konica Minolta views respect for human rights as one of the basic conditions for its business activities. This is in line with the company's goal of contributing to a sustainable society in which human rights are respected. In particular, Konica Minolta supports and respects the following internationally accepted standards:

- Universal Declaration of Human Rights
- United Nations Guiding Principles on Business and Human Rights
- The International Labour Organization (ILO) Declaration on Fundamental Principles and Rights at Work
- OECD Guidelines for Multinational Enterprises
- United Nations Global Compact
- ISO 26000

Going forward, Konica Minolta will continue to communicate widely with stakeholders and work to respect and promote initiatives for human rights.

In line with social expectations, Konica Minolta has for years been working hard to address various human rights issues related to its business activities, including CSR procurement (responsible procurement in the supply chain), employee-related initiatives such as prohibition of discrimination and harassment, and the protection of customers' and employees' personal information. In 2011, the UN Human Rights Council endorsed the UN Guiding Principles on Business and Human Rights, calling on companies to do more to address human rights issues. In response, Konica Minolta identified actual or potential adverse human rights impacts thought to be relevant to its business activities, including its existing human rights-related initiatives. Looking ahead, Konica Minolta will expand upon its current human rights-related initiatives by ensuring that they continue to meet social expectations. It also plans to give greater shape to its programs by improving on its efforts as needed through stakeholder engagement, including the broader participation of relevant persons within the company.

Actual or potential adverse human rights impacts

- Group employees' human rights
Working hours, wages and benefits, harassment, discrimination, health and safety, protection of privacy
- Human rights in the supply chain
Forced labor, child labor, wages and benefits, harassment, discrimination, freedom of association, health and safety
- Customers' human rights
Protection of personal information

Human Rights Assessment in the Supply Chain of Existing Businesses

Konica Minolta aims to help build a more sustainable world, where all human rights are respected. Toward that end, the Group works at CSR procurement (responsible procurement in the supply chain), in order to facilitate appropriate improvements in labor (human rights) as well as ethics, health, safety, and the environment. These efforts are undertaken not only at the Group's production sites but also at the suppliers from which the Group sources raw materials, parts, and other materials, and to which it contracts production and distribution services.

In practicing CSR procurement, Konica Minolta conducts risk assessments and takes corrective actions through CSR assessments using a self-assessment questionnaire and CSR audits, based on the framework of the Responsible Business Alliance (RBA).

In CSR assessments, Konica Minolta classifies the results of the self-assessment questionnaire from rank A to C. The targets for overall scores are rank A for all Group production sites and rank B or higher for all suppliers. Even if overall assessment results meet the targets, Konica Minolta asks suppliers to make voluntary improvements in specific components that showed weakness, including labor (human rights).

[Responsible Supply Chain](#)

Employee Human Rights Assessment

Konica Minolta has long undertaken human rights initiatives such as the prohibition of discrimination and the prevention of harassment.

At all production sites subject to confirmation, human rights assessments are carried out as part of the labor (human rights) evaluation performed during CSR procurement activities. These production sites conduct human rights assessments during CSR evaluations once every three years, and make corrections as appropriate.

Respect for Human Rights and Elimination of Discrimination

The entire Group is committed to showing respect for the rights of all employees.

The entire Konica Minolta Group is committed to showing respect for the human rights of each and every employee. The Group seeks to enable all employees to enhance their abilities and professional skills and achieve their career goals. This aspiration is articulated in the Konica Minolta Group Guidance for Charter of Corporate Behavior and the Compliance Manual, where Konica Minolta states its commitment as follows:

- We respect individuality, human rights, and the privacy of all of our employees.
- We seek to eliminate discrimination of all kinds, whether based on race, nationality, gender, gender identity/sexual orientation, religion, belief, or physical disability.
- We seek to eliminate child labor and forced labor.
- We endeavor to create a safe and healthy workplace environment.

Konica Minolta also strives to ensure that all employees are aware of these priorities.

Konica Minolta makes it a rule to strictly confirm the age of applicants when hiring new employees. By taking such steps, it ensures that there is no child labor or forced labor in the Group.

As part of its efforts to promote compliance, Konica Minolta has established consultation offices for addressing human rights violations in each of its host countries.

- › [Compliance \(Group Guidance for the Charter of Corporate Behavior and Compliance Manual\)](#)
- › [Compliance \(Internal Hotline Systems\)](#)

Harassment Prevention

Striving to create an environment with zero tolerance for harassment

To protect employees against sexual harassment or the abuse of power in the workplace, Konica Minolta has included a prohibition against harassment in the Konica Minolta Group Guidance for the Charter of Corporate Behavior and Compliance Manual. The Group has also established its Sexual Harassment Prevention Guidelines and strives to educate employees by conducting harassment prevention training.

Managers are also given training concerning sexual harassment and power harassment.

As part of its efforts to promote compliance, Konica Minolta has established consultation offices for addressing harassment complaints in each of its host countries.

- › [Guidance for the Charter of Corporate Behavior and Compliance Manuals Prepared for Each Region](#)
- › [Compliance \(Internal Hotline Systems\)](#)

Motivating Treatment

The Konica Minolta Group abides by minimum wage rules in each region and strives to maintain a wage level at which employees can work with motivation.

Labor-Management Relations

Promoting constructive communication between labor and management

Konica Minolta takes part in the UN Global Compact and upholds freedom of association and the effective recognition of the right to collective bargaining. The Konica Minolta Labor Union of Konica Minolta, Inc. has a sizable membership of 4,921 (all regular employees, not including managers), as of March 31, 2020.

Labor-management agreements are concluded between workers and the Group's management, and representatives of both parties hold constructive discussions at management meetings. Many of the Group's other companies also have their own labor unions or employee associations, and these have allowed the companies to build good labor-management relations.

Konica Minolta has a process in which a human resources system investigation committee, consisting of representatives of the human resources department and the labor union, discusses the overall personnel system for employees and works to form a consensus. In fiscal 2019, this committee held discussions on and implemented measures to foster a culture that encourages people to accept challenges and to further promote the taking of annual paid leave.

As of March 31, 2020, the worldwide membership of the Group's labor unions stood at 84% of non-management employees.

- › [Participation in the UN Global Compact](#)

Advance Notification of Personnel Transfers

Konica Minolta, Inc. makes it a practice to put forward proposals to the labor union at least one month in advance for personnel transfers involving relocation, and at least two weeks in advance for all other personnel transfers.

It also makes it a practice to consult with the labor union in advance about policy and standards when, for business reasons, it plans to reassign, transfer to a different workplace, second, or transfer to different teams, a large number of union members.

Information Security

▼ Basic Policy ▼ Promoting Information Security ▼ Protecting Personal Information

Basic Policy

Information security is the most important issues for any company that wants to effectively utilize all the types of information in its possession. Konica Minolta treats information as a valuable asset, and is working to ensure information security. It does this by practicing proper information management to address risks such as loss, leakage, or destruction of data, while carrying out continual improvements.

▶ [Konica Minolta Information Security Policy](#)

Promoting Information Security

Based on the leadership of the President and CEO as well as the officer in charge of the IT planning and management organization, Konica Minolta has established a Group-wide information security management system and is promoting a higher level of IT security and continual improvements at Group companies worldwide.

In order to ensure the security (confidentiality, integrity, and availability) of controlled information, including not only information handled using information technology, but also information on paper and information about services and personnel, all Group companies in Japan have continuously maintained ISO 27001 certification, which is the international standard for information security management, since fiscal 2009. In addition, once a year risk assessments of information security are conducted and a risk response plan is formulated. At quarterly meetings of information security promoters, incident summaries are reported to the Information Security Control Officer and instructions for necessary responses are issued. In this way, the PDCA cycle is followed.

Furthermore, measures to prevent unauthorized use and information leakage are implemented through the enactment and operation of rules relating to the management of confidential information and the establishment of systems for restricting and monitoring access to confidential information and its removal off-site. Also, education on the protection of personal information and information security is given at least once a year to directors and officers, and all employees, including non-regular employees, of Group companies in Japan.

Outside Japan as well, Group companies work to obtain ISO 27001 certification. Also, all Group companies outside Japan are required to provide all employees with education on information security at least once a year.

Especially with respect to cyber attacks, that have increased in recent years, by following the Cybersecurity Management Guidelines formulated by Japan's Ministry of Economy, Trade and Industry, our management team is aware of the importance of cyber security risk countermeasures and implements global security measures for IT, including establishing a Konica Minolta Computer Security Incident Response Team named KM-CSIRT, that responds to incidents throughout the Group.

Finally, Konica Minolta is putting in place IT security controls, which are a part of the IT controls required under the Financial Instruments and Exchange Act (Japanese Sarbanes-Oxley Act) while ensuring compatibility within the Group.

Protecting Personal Information

Konica Minolta takes full precautions to protect the personal information of customers.

Konica Minolta, Inc. has established the Global Personal Data Protection Policy and regulations for protection of the personal data of the Konica Minolta Group, which address the EU's General Data Protection Regulation (GDPR). In accordance with this policy and rules, the Group has established a worldwide system for protecting personal information and properly manages the personal information in its possession. Employees are also kept up-to-date on the policy and rules through e-Learning and other methods of training.

In the event of information leakage, including leakage of personal information held by Konica Minolta, is confirmed or likely has occurred, the information security management system will report it to the Personal Information Protection Officer. The Officer will immediately check the facts and degree of impact and submit the report to the Personal Information Protection Commission in Japan and other appropriate authorities in the respective countries.

In fiscal 2019, a leak of personal data occurred at a site outside Japan. Appropriate response measures were taken using an incident system already in place, and IT security was tightened to prevent a recurrence.

Konica Minolta Information Security Policy

Guided by our management philosophy of “The Creation of New Value,” we at the Konica Minolta Group are committed to providing products and services that contribute to the development of society.

We are dedicated to maintaining information security (confidentiality, integrity, and availability), which is one of the most important issues related to business activities. Given this commitment, our basic approach to information security is to continuously make improvements by measuring and assessing risks associated with important information assets, and applying effective measures to mitigate those risks.

“Management Based On Facts”

1. Direction of Information Security Initiatives

We will strive to continually provide products and services and develop sound businesses, while recognizing our obligation to protect information assets handled in the course of business activities.

2. Compliance with Laws and Other Requirements

We will comply with the legal requirements of Japan and other countries related to information security, as well as social norms, internal company standards, and contractual security obligations. On this basis, we will properly accommodate agreements made by the international community.

3. Establishment of Information Security Management System

We will establish an information security management system in order to appropriately grasp business risks and changes in the risk environment and to establish and maintain response strategies. We will work to maintain, further develop, and revise the system by establishing objectives for information security.

4. Risk Response

As a manufacturer we will deal with a broad range of risks related to activities from development and production to sales and service. For risk assessment, we will establish criteria to assess the relative importance of each information asset and stringently manage our assets based on these assessments.

5. Protection from Threats

We will take appropriate measures in order to protect information assets from threats such as accidents, hindrances, or improper activity that would prevent the assets from being properly utilized, and in order to prevent information assets from being lost, damaged, altered, or divulged.

6. Information Security Education and Training

We will provide the necessary education and training to all employees and will carry out business while recognizing our societal responsibility to use and manage information assets appropriately.

7. Continuous Improvement

We will strive to continuously make improvements by reviewing this information security policy and our management measures on a regular basis, and as necessary, within the framework of our information security management system.

8. Active Disclosure

We will communicate risks to stakeholders and be accountable to them. This policy will be disclosed to all employees and outside parties.

Contributing to Society

For smiling faces around the world

Helping to solve local social issues around the world,
focusing on issues where we can make a unique contribution

Konica Minolta Basic Policy on Corporate Citizenship

As a responsible global corporate citizen, Konica Minolta makes Group-wide efforts to address social issues that it can contribute to through its businesses to be an entity that is essential to society. We are also committed to contributing to the creation of a sustainable society by continually engaging in activities that meet local challenges in the various countries where it operates.

Konica Minolta's Philosophy and Social Contribution

Konica Minolta sets its mission as "the Creation of New Value." The company exists for this very purpose: to use creative ideas to deliver tangible new value in order to resolve the challenges faced by customers and the broader society.

For companies to be sustainable in the times ahead, they will have to contribute to the resolution of social challenges while continuing to grow. In other words, they will be required to create new value for both the company and society.

Today's companies are also expected to take action to address wide-ranging social issues, such as those specified in the Sustainable Development Goals (SDGs) adopted at the United Nations Sustainable Development Summit in September 2015.

Konica Minolta is no exception; our new Medium-Term Business Plan, SHINKA 2019, embodies strong commitment to being a digital company with insight into implicit challenges to supporting and creating new value to contribute to the evolution of business and the society.

As a citizen of the world, Konica Minolta aims to become vital to the society, not only by providing new value through business but also by solving social challenges.

Konica Minolta's Contribution Fields and Strategy

Konica Minolta has identified the six material issues that to address with priority, with the aim of ensuring that its initiatives with a balance between social issues and business objectives.

In co-relation to its business strategy, Konica Minolta also set its strategic fields of social contribution :

- Healthcare — in objective to deliver good-health and well-being to everyone, by enhancing the importance of early detection of disease, hence improvement of quality of life, Konica Minolta contributes to aging society and working female population's health through its technologies
- Environment — as a manufacturer, Konica Minolta not only works on responsible production in the scope of its value chain, but also expanding its contribution to local communities and external parties in order to reduce environmental impact at a broader scale
- Education and academics — Konica Minolta shares its expertise and competencies for greater technological development through scientific societies and conferences, including the Konica Minolta Science and Technology Foundation. Konica Minolta contributes not only through advanced technologies, but also through the education of the younger generations.

Konica Minolta believes that contributing in the above fields using its resources and expertise is part of its achievement of the SDGs and is for the greater good.

SUSTAINABLE DEVELOPMENT GOALS

▶ Health, Medicine, and Sports

Konica Minolta cooperates in Pink Ribbon activities for the early detection of breast cancer and supports the visually impaired around the world. It also promotes sports, including the sponsorship of running classes, led by the Konica Minolta Track and Field Club across Japan.

▶ Environmental Actions

Konica Minolta focuses on reducing its environmental impact and protecting the environment. It undertakes these endeavors by supporting charities through its business activities and capabilities.

▶ Scholarship, Research, and Education

Konica Minolta supports education in a variety of ways, including providing support for schools in China, promoting school attendance in North America, and helping the career development of women in Europe.

▶ Disaster Relief and Volunteerism

Konica Minolta supports areas hit by disasters in Japan and across the world. It also supports people with disabilities through company funds.

Konica Minolta's Social Contribution Achievement

During the fiscal year 2019 (fiscal year ended March 2020), Konica Minolta group companies collectively made financial contribution of approximately 136 million JPY, in-kind donation of 91 million JPY equivalent and manpower participation of 202 million JPY equivalent at global scale.

The financial donation can be categorized into charitable donation, commercial initiatives, community investment; 32%, 35%, 33% respectively.

(This includes monetary contributions of 66.77 million JPY to specified public-service promotion corporations and other entities by Konica Minolta domestic group companies.)

Health, Medicine, and Sports

Early Detection of Breast Cancer

Konica Minolta's Pink Ribbon campaign symbol

Konica Minolta, Inc., supplies digital mammography units that are effective for early detection of breast cancer. Naturally, Konica Minolta also supports the Pink Ribbon campaign, which emphasizes the importance of early breast cancer detection, in all Group companies around the world.

› [Digital Mammography Products](#)

Raising Awareness of the Importance of Early Detection of Breast Cancer

China

Women's Health Forum

In China, Konica Minolta (China) Investment continues to work in a variety of ways to promote the early detection of breast cancer. Between 2007 and 2008, the company held a series of health lectures at Women's Health Forums in Shanghai and Beijing. Focusing on health risks unique to women and everyday health management, and cosponsored by local women's associations and libraries, these lectures were attended by a total of over 3,000 participants. Further in October 2008, the Breast Cancer Early Diagnosis Project was launched in Shanghai promoted by seven Japanese companies, including Konica Minolta. Under this project, the participating companies bore the costs of carrying out checkups of female office workers aged 35 and over, among whom there is a high incidence of breast cancer. By fiscal year 2018, checkups were performed for approximately 2,900 women in Shanghai, Beijing, and Guangzhou, with breast cancer lectures provided for those who were interested.

Supporting Cancer Advocacy Organizations

The Konica Minolta Group provides support for organizations that assist breast cancer patients and their families in each area. In North America, Konica Minolta Healthcare Americas, Inc. assists the Susan G. Komen organization and other organizations. In Australia, Konica Minolta Business Solutions Australia Pty. Ltd. helps out the Breast Cancer Network of Australia. We provide a range of support to each organization that includes monetary donations, donations of Konica Minolta office equipment and supplies, and participation by employee volunteers in charity events and fund raising activities. Konica Minolta also supports organizations related to various kinds of cancer across the world, in Northern America, Australia, Malasia, etc.

Social Contribution in Local Sports

In running clinics and jogging classes, Konica Minolta conveys the joy of running and the running knowhow cultivated by the Konica Minolta Track and Field Club over many years. Konica Minolta encourages interaction among community members, from beginners to serious runners, and helps to promote sports through original initiatives.

Environmental Actions in the Society

Konica Minolta's Environmental Strategy and Social Contribution

Japan

Open environmental conference organised by Konica Minolta

Energy saving diagnosis at customer's factory

Konica Minolta strengthened its environmental strategy Eco Vision 2050 by adding a further ambitious goal : its Carbon Minus concept.

Not only do we contribute to environment through supporting various charities and action, but we aim for contribution through our business and production expertise too.

Specifically, Konica Minolta shares its environmental expertise and knowledge as manufacturing business player through conferences, diagnosis visits and tools provided to companies (Green Marketing activity) and proposing to its supplier better actions for reducing environmental impact through encouraging them with motivating facts and figures (Green Suppliers Activity).

In accumulation since fiscal 2014, Konica Minolta carried out environmental conferences in 2,239 different companies inviting almost 4,700 participants, simply of goodwill.

As of today, 23 main suppliers work with us to reduce their environmental impact.

Aware of the importance of tackling environmental problems industry-wide to drastically increase the problem-solving ability, Konica Minolta launched the Environmental Digital Platform in cooperation with 16 Japanese companies in June 2020 to share and expand environmental know-how among them and create new values together to enhance environmental management efficiency.

Thus, Konica Minolta aims contributing to the Earth and society at greater scale by collaborating with external stakeholders, including suppliers, customers and society. .

Supporting a Marathon to Fund Tree-Planting in Ethiopia

France

Held in Rennes, the regional capital of Brittany in France, the Green Marathon (Marathon Vert) is a charity run that endorses and helps to sponsor projects that help with reforestation around the world. In its first eight years through 2019, the marathon contributed to the planting of over 840,000 trees in Ethiopia, India, Portugal, Germany, and France. Konica Minolta Business Solutions France has provided support for the marathon since fiscal 2011, and has been a title sponsor since fiscal 2013.

Supporting a Charity for Protecting the Japanese Red-Crowned Crane

Japan

Not long ago, the number of red-crowned cranes* indigenous to Japan plummeted due to the deterioration of their native habitat. The bird was, for a time, on the verge of extinction. However, thanks to the establishment of the Tsurui Ito Red-Crowned Crane Sanctuary in 1987 by the Wild Bird Society of Japan, and to the protection activities undertaken by local residents and concerned organizations, the number of cranes has increased to more than 1,000. Konica Minolta has been a supporter of the crane-protection activities since the establishment of the sanctuary. As part of this effort, Konica Minolta co-sponsors the Konica Minolta Japanese Red-Crowned Crane Charity.

* The red-crowned crane is a large bird with a white body and a patch of red on the crown of its head. Its habitat extends from eastern Eurasia to Hokkaido in Japan.

Supporting Environmental Conservation Activities in Australia

Over the years, Konica Minolta Business Solutions Australia Pty. Ltd. has been raising funds and sending employee volunteers to support organizations which work to protect the environment. Most recently, for Landcare Week in fiscal 2017, 25 employees took part in weed removal and native tree planting in a bushland area.

Supporting Forest Conservation Activities

Japan

Konica Minolta is a participant and a partner in a variety of forest protection initiatives. One of these is the Takao Forest Society. Focusing on the natural vegetation in the national forest located in Uratakao, in the western part of Tokyo Metropolis, the Society aims, by thinning the trees, planting more, clearing undergrowth, and so on, to re-create a lush forest where coniferous trees mingle with broad-leaved varieties. Konica Minolta is a corporate member of the Society, and the employees take part in its activities, working up a sweat for the cause of fostering better forests. In addition, the quarterly newsletter of the Society is printed using Konica Minolta's digital printing system. Additionally, at sites around the world, Konica Minolta sends out employee volunteers to take part in environmental conservation activities, conduct community cleanups around its sites, and provide support to organizations.

Scholarship, Research, and Education

Konica Minolta Science and Technology Foundation

Japan

Tracing its origins back to 1966, the Konica Minolta Science and Technology Foundation has pursued ongoing initiatives focusing on the promotion of imaging science by providing support for research projects in this field. The foundation solicits research projects based on new ideas in the field of imaging science, and presents the Konica Minolta Imaging Science Award for outstanding research projects. In accordance with the mission of the foundation, Konica Minolta offers financial support for its activities every year.

Community Contribution through Planetariums

Planetariums cultivate intellectual curiosity in science and astronomy, and motivate people to learn about space and to think about the Earth and humankind. Konica Minolta contributes to society by screening educational projections for elementary school students at Konica Minolta Planetarium “Manten”. The educational projections provide content specifically for elementary school students on the themes of seasonal constellations and movements of the stars and moon.

› Konica Minolta Planetarium Co., Ltd.

Supporting the Career Development of Women in the IT Industry

Germany
Czech Rep.

Workshop

Konica Minolta collaborated with the NGO Impact Hub and Czechitas on capacity building to support women's career development and to build up the IT knowledge of women in the Czech Republic and Germany.

As a program co-sponsor, Konica Minolta dispatched IT experts to workshops designed to enhance the IT knowledge and entrepreneurial knowhow of women who aspire to find employment in the IT industry, change jobs, or launch their own business.

The goal was to promote the career development of women in the IT industry and thereby encourage diversity in this industry.

Guest Lectures on the Structure of a Copier

Japan

Since 2012, Konica Minolta, Inc., has offered guest lectures at junior and senior high schools as part of its educational support activities. The theme of these lectures is the structure of a copier and MFPs. The lectures explain the principle of copying using static electricity in a clear manner using familiar examples, and facilitate understanding through hands-on activities using experimental equipment.

In fiscal year 2018, newly graduated employees served as guest lecturers for 688 students at 7 junior high and high schools in Tokyo, Aichi, and Osaka prefectures. In recognition of this initiative, Konica Minolta received an Education Support Grand Prize 2018 and a Platinum Award.

In total since 2012, Konica Minolta has carried out these lectures at 49 different schools for 4,228 students in three cities.

Helping Young People Form Careers

India

In cooperation with a local vocational training institute, Konica Minolta Business Solutions India Private Ltd. has been conducting skills development programs for young people from under-resourced families since 2016. Program participants receive basic training in a wide range of subjects including English, electronic engineering, machinery, and multi-functional peripherals services over a two-month period. This program supports young people facing a shortage of jobs, which has become a challenge for new graduates in India in recent years.

Supporting Childhood Education

Children visiting the company on their graduation trip

Konica Minolta sees education of the next generation as vital to the world's future. This is why the Group provides various kinds of educational support.

In Northern America, Konica Minolta Business Solutions USA has continuously participated in Books2BETTER, a program that donates books to children, and Back to School program, which provides children with school supplies.

The Books2BETTER program calls on employees throughout the U.S. to help collect books to be donated to schools, libraries, non-profits, and other organizations for preschool children from low-income families.

In China, Konica Minolta supports Project Hope, a campaign launched in 1989 by the China Youth Development Foundation to promote school attendance among children. The support for this project started in 2006 with the donation of funds to cover the construction costs for building an elementary school in Zhuanghe, Dalian (Liaoning Province), and has been ongoing in various other ways.

Representatives of Konica Minolta Opto (Dalian) Co., Ltd., a company manufacturing optical lenses and other products, visit schools on China's annual Children's Day (June 1) to deliver grants and stationery.

Konica Minolta Opto (Shanghai) Co., Ltd., a company manufacturing optical lenses and other products, provides support for local elementary schools in order to improve the learning environment for the children of migrant workers.

Disaster recovery and volunteerism

Provision of “Spring of Relief” Water Resources as Disaster Preparedness

Japan

In fiscal 2014, Konica Minolta, Inc. signed a Disaster Cooperation Agreement with the city of Hino in Tokyo and the Hino Municipal Hospital. Under the agreement, the company installed a private electric generator at the well it owns at Tokyo Site Hino so that the well can be operated even during a power outage. The well can supply the large amounts of water needed during a disaster for dialysis and treatment at medical facilities as well as drinking and everyday water for community residents. Thus, the well was improved as the “Spring of Relief” disaster preparedness water resource. Going forward, the company will continue contributing to the safety and security of the community through cooperation with medical institutions, waterworks departments, and fire departments.

Participation in Efforts to Support Disaster-Affected Areas

Japan

The Great East Japan Earthquake that struck in March 2011 caused massive damage to the coastal region as a result of the major tsunami that accompanied the earthquake. In September 2011, the Group sent approximately 100 new employees to the town of Minamisanriku in Miyagi Prefecture, which was one of the disaster-struck areas. Together with other volunteers, they took part in recovery activities such as clearing away debris and cleaning. Since fiscal 2013, the Group has been organizing and dispatching employee volunteers to take part in the Watari Green Belt Project in Miyagi Prefecture. It is a program that promotes the restoration of farmland and the regrowth of the coastal forest, which provides protection against high tides.

Support for a Children’s Sports Class

Japan

Soccer Class

The Konica Minolta Group is an annual sponsor of sports events for children in the Tohoku Region of Japan organized by the United Sports Foundation, which conducts social contribution activities through sports. In fiscal 2018, it held the “Konica Minolta presents USF Sports Festival” in Sendai.

Fondation d'entreprise

› Fondation d'entreprise 

Konica Minolta's MFPs incorporate the principles of universal design to make them easy to use for people of all ability levels. In an effort to promote the idea of universal design even further, Konica Minolta Business Solutions France S.A.S., a sales company for office equipment and solutions, established the Konica Minolta Enterprise Foundation. In order to facilitate the access of people with disabilities to sports, entertainment, culture, education, and work, the foundation is promoting barrier free access in public places. This initiative, which began as the idea of just five employees, has now gone company-wide. Many employees are making donations and participating in various ways.

Konica Minolta Business Solutions France S.A.S., a sales company for office equipment and solutions, established the Konica Minolta Enterprise Foundation in 2011 in order to facilitate the access of people with disabilities to sports, entertainment, culture, education, and work. The Foundation also allows employees to participate by proposing projects. Foundation funds are applied to a wide variety of projects, from local to national in scale, working in cooperation with a number of non-profit organizations, cultural venues, and institutions. One example of a funded project took place with the Quai Branly Museum in Paris, where the Foundation supported the creation of 3D models to assist people with visual impairments to understand the floor plans of the museum. The fund is also being used to support projects by the French National Forestry Office to build a wheelchair path in the Chamonix Valley, and a facility that allows people in wheelchairs to go swimming along Atlantic Coast beaches.

The Foundation also conducts diverse activities that include maintaining and improving leisure facilities, donating goods for disabled sports, improving entranceways for leisure boats, and purchasing and training service dogs, and donating learning equipment for children with autism.

Guidelines Index

If consultation is delegated, describe to whom it is delegated and how the resulting feedback is provided to the highest governance body.</p>	Basic Approach and Systems for Sustainability Management
102-22	<p>a. Composition of the highest governance body and its committees by:</p> <ul style="list-style-type: none"> i. executive or non-executive; ii. independence; iii. tenure on the governance body; iv. number of each individual's other significant positions and commitments, and the nature of the commitments; v. gender; vi. membership of under-represented social groups; vii. competencies relating to economic, environmental, and social topics; viii. stakeholder representation. 	Corporate Governance System Corporate Governance Report
102-23	<p>a. Whether the chair of the highest governance body is also an executive officer in the organization.</p> <p>b. If the chair is also an executive officer, describe his or her function within the organization's management and the reasons for this arrangement.</p>	Corporate Governance System
102-24	<p>a. Nomination and selection processes for the highest governance body and its committees.</p> <p>b. Criteria used for nominating and selecting highest governance body members, including whether and how:</p> <ul style="list-style-type: none"> i. stakeholders (including shareholders) are involved; ii. diversity is considered; iii. independence is considered; iv. expertise and experience relating to economic, environmental, and social topics are considered. 	Corporate Governance System Corporate Governance Report
102-25	<p>a. Processes for the highest governance body to ensure conflicts of interest are avoided and managed.</p> <p>b. Whether conflicts of interest are disclosed to stakeholders, including, as a minimum:</p> <ul style="list-style-type: none"> i. Cross-board membership; ii. Cross-shareholding with suppliers and other stakeholders; iii. Existence of controlling shareholder; iv. Related party disclosures. 	Corporate Governance Report
102-26	<p>a. Highest governance body's and senior executives' roles in the development, approval, and updating of the organization's purpose, value or mission statements, strategies, policies, and goals related to economic, environmental, and social topics.</p>	Basic Approach and Systems for Sustainability Management
102-27	<p>a. Measures taken to develop and enhance the highest governance body's collective knowledge of economic, environmental, and social topics.</p>	Corporate Governance Report

GRI Standards	Requirements	Page Number/URL
102-28	<p>a. Processes for evaluating the highest governance body's performance with respect to governance of economic, environmental, and social topics.</p> <p>b. Whether such evaluation is independent or not, and its frequency.</p> <p>c. Whether such evaluation is a self-assessment.</p> <p>d. Actions taken in response to evaluation of the highest governance body's performance with respect to governance of economic, environmental, and social topics, including, as a minimum, changes in membership and organizational practice.</p>	Corporate Governance Report
102-29	<p>a. Highest governance body's role in identifying and managing economic, environmental, and social topics and their impacts, risks, and opportunities – including its role in the implementation of due diligence processes.</p> <p>b. Whether stakeholder consultation is used to support the highest governance body's identification and management of economic, environmental, and social topics and their impacts, risks, and opportunities.</p>	Basic Approach and Systems for Sustainability Management Environmental Targets and Results Risk Management
102-30	<p>a. Highest governance body's role in reviewing the effectiveness of the organization's risk management processes for economic, environmental, and social topics.</p>	Risk Management
102-31	<p>a. Frequency of the highest governance body's review of economic, environmental, and social topics and their impacts, risks, and opportunities.</p>	Risk Management
102-32	<p>a. The highest committee or position that formally reviews and approves the organization's sustainability report and ensures that all material topics are covered.</p>	Basic Approach and Systems for Sustainability Management
102-33	<p>a. Process for communicating critical concerns to the highest governance body.</p>	Risk Management Compliance Promotion System
102-34	<p>a. Total number and nature of critical concerns that were communicated to the highest governance body.</p> <p>b. Mechanism(s) used to address and resolve critical concerns.</p>	Compliance Promotion System
102-35	<p>a. Remuneration policies for the highest governance body and senior executives for the following types of remuneration:</p> <ul style="list-style-type: none"> i. Fixed pay and variable pay, including performance-based pay, equity-based pay, bonuses, and deferred or vested shares; ii. Sign-on bonuses or recruitment incentive payments; iii. Termination payments; iv. Clawbacks; v. Retirement benefits, including the difference between benefit schemes and contribution rates for the highest governance body, senior executives, and all other employees. <p>b. How performance criteria in the remuneration policies relate to the highest governance body's and senior executives' objectives for economic, environmental, and social topics.</p>	Corporate Governance System Corporate Governance Report Integrated Report (Annual Report)
102-36	<p>a. Process for determining remuneration.</p> <p>b. Whether remuneration consultants are involved in determining remuneration and whether they are independent of management.</p> <p>c. Any other relationships that the remuneration consultants have with the organization.</p>	Corporate Governance System Corporate Governance Report Integrated Report (Annual Report)
102-37	<p>a. How stakeholders' views are sought and taken into account regarding remuneration.</p> <p>b. If applicable, the results of votes on remuneration policies and proposals.</p>	-
102-38	<p>a. Ratio of the annual total compensation for the organization's highest-paid individual in each country of significant operations to the median annual total compensation for all employees (excluding the highest-paid individual) in the same country.</p>	-

GRI Standards	Requirements	Page Number/URL
102-39	a. Ratio of the percentage increase in annual total compensation for the organization's highest-paid individual in each country of significant operations to the median percentage increase in annual total compensation for all employees (excluding the highest-paid individual) in the same country.	-
5.Stakeholder engagement		
102-40	a. A list of stakeholder groups engaged by the organization.	Basic Approach and Systems for Sustainability Management Relationship between Konica Minolta and Stakeholders
102-41	a. Percentage of total employees covered by collective bargaining agreements.	Human Rights Human Resources Data Summary
102-42	a. The basis for identifying and selecting stakeholders with whom to engage.	Relationship between Konica Minolta and Stakeholders
102-43	a. The organization's approach to stakeholder engagement, including frequency of engagement by type and by stakeholder group, and an indication of whether any of the engagement was undertaken specifically as part of the report preparation process.	Basic Approach and Systems for Sustainability Management Relationship between Konica Minolta and Stakeholders
102-44	a. Key topics and concerns that have been raised through stakeholder engagement, including: i. how the organization has responded to those key topics and concerns, including through its reporting; ii. the stakeholder groups that raised each of the key topics and concerns.	Basic Approach and Systems for Sustainability Management Relationship between Konica Minolta and Stakeholders
6.Reporting practice		
102-45	a. A list of all entities included in the organization's consolidated financial statements or equivalent documents. b. Whether any entity included in the organization's consolidated financial statements or equivalent documents is not covered by the report.	Corporate Information > Company Overview > Global Network
102-46	a. An explanation of the process for defining the report content and the topic Boundaries. b. An explanation of how the organization has implemented the Reporting Principles for defining report content.	Basic Approach and Systems for Sustainability Management Sustainability Report Editorial Policy
102-47	a. A list of the material topics identified in the process for defining report content.	Basic Approach and Systems for Sustainability Management
102-48	a. The effect of any restatements of information given in previous reports, and the reasons for such restatements.	-
102-49	a. Significant changes from previous reporting periods in the list of material topics and topic Boundaries.	-
102-50	a. Reporting period for the information provided.	Sustainability Report Editorial Policy
102-51	a. If applicable, the date of the most recent previous report.	Sustainability Report Editorial Policy
102-52	a. Reporting cycle.	Sustainability Report Editorial Policy
102-53	a. The contact point for questions regarding the report or its contents.	Contact
102-54	a. The claim made by the organization, if it has prepared a report in accordance with the GRI Standards, either: i. 'This report has been prepared in accordance with the GRI Standards: Core option'; ii. 'This report has been prepared in accordance with the GRI Standards: Comprehensive option'.	Core

GRI Standards	Requirements	Page Number/URL
102-55	<p>a. The GRI content index, which specifies each of the GRI Standards used and lists all disclosures included in the report.</p> <p>b. For each disclosure, the content index shall include:</p> <ul style="list-style-type: none"> i. the number of the disclosure (for disclosures covered by the GRI Standards); ii. the page number(s) or URL(s) where the information can be found, either within the report or in other published materials; iii. if applicable, and where permitted, the reason(s) for omission when a required disclosure cannot be made. 	GRI/ISO26000/United Nations Global Compact Content Indices
102-56	<p>a. A description of the organization's policy and current practice with regard to seeking external assurance for the report.</p> <p>b. If the report has been externally assured:</p> <ul style="list-style-type: none"> i. A reference to the external assurance report, statements, or opinions. If not included in the assurance report accompanying the sustainability report, a description of what has and what has not been assured and on what basis, including the assurance standards used, the level of assurance obtained, and any limitations of the assurance process; ii. The relationship between the organization and the assurance provider; iii. Whether and how the highest governance body or senior executives are involved in seeking external assurance for the organization's sustainability report. 	External Assurance

Topic-specific Standards

* Core requirements

Economic

GRI Standards	Requirements	Page Number/URL
GRI 201: Economic Performance		
201-1	<p>a. Direct economic value generated and distributed (EVG&D) on an accruals basis, including the basic components for the organization's global operations as listed below. If data are presented on a cash basis, report the justification for this decision in addition to reporting the following basic components:</p> <ul style="list-style-type: none"> i. Direct economic value generated: revenues; ii. Economic value distributed: operating costs, employee wages and benefits, payments to providers of capital, payments to government by country, and community investments; iii. Economic value retained: 'direct economic value generated' less 'economic value distributed'. <p>b. Where significant, report EVG&D separately at country, regional, or market levels, and the criteria used for defining significance.</p>	Financial Results / Presentation Materials FY2020
201-2	<p>a. Risks and opportunities posed by climate change that have the potential to generate substantive changes in operations, revenue, or expenditure, including:</p> <ul style="list-style-type: none"> i. a description of the risk or opportunity and its classification as either physical, regulatory, or other; ii. a description of the impact associated with the risk or opportunity; iii. the financial implications of the risk or opportunity before action is taken; iv. the methods used to manage the risk or opportunity; v. the costs of actions taken to manage the risk or opportunity. 	Eco Vision 2050 Environmental Targets and Results Environmental Accounting in Fiscal 2019

GRI Standards	Requirements	Page Number/URL
201-3	<p>a. If the plan's liabilities are met by the organization's general resources, the estimated value of those liabilities.</p> <p>b. If a separate fund exists to pay the plan's pension liabilities:</p> <ul style="list-style-type: none"> i. the extent to which the scheme's liabilities are estimated to be covered by the assets that have been set aside to meet them; ii. the basis on which that estimate has been arrived at; iii. when that estimate was made. <p>c. If a fund set up to pay the plan's pension liabilities is not fully covered, explain the strategy, if any, adopted by the employer to work towards full coverage, and the timescale, if any, by which the employer hopes to achieve full coverage.</p> <p>d. Percentage of salary contributed by employee or employer.</p> <p>e. Level of participation in retirement plans, such as participation in mandatory or voluntary schemes, regional, or country-based schemes, or those with financial impact.</p>	Financial Results / Presentation Materials FY2019
201-4	<p>a. Total monetary value of financial assistance received by the organization from any government during the reporting period, including:</p> <ul style="list-style-type: none"> i. tax relief and tax credits; ii. subsidies; iii. investment grants, research and development grants, and other relevant types of grant; iv. awards; v. royalty holidays; vi. financial assistance from Export Credit Agencies (ECAs); vii. financial incentives; viii. other financial benefits received or receivable from any government for any operation. <p>b. The information in 201-4-a by country.</p> <p>c. Whether, and the extent to which, any government is present in the shareholding structure.</p>	-
GRI 202: Market Presence		
202-1	<p>a. When a significant proportion of employees are compensated based on wages subject to minimum wage rules, report the relevant ratio of the entry level wage by gender at significant locations of operation to the minimum wage.</p> <p>b. When a significant proportion of other workers (excluding employees) performing the organization's activities are compensated based on wages subject to minimum wage rules, describe the actions taken to determine whether these workers are paid above the minimum wage.</p> <p>c. Whether a local minimum wage is absent or variable at significant locations of operation, by gender. In circumstances in which different minimums can be used as a reference, report which minimum wage is being used.</p> <p>d. The definition used for 'significant locations of operation'.</p>	-
202-2	<p>a. Percentage of senior management at significant locations of operation that are hired from the local community.</p> <p>b. The definition used for 'senior management'.</p> <p>c. The organization's geographical definition of 'local'.</p> <p>d. The definition used for 'significant locations of operation'.</p>	Human Resources Data Summary
GRI 203: Indirect Economic Impacts		
203-1	<p>a. Extent of development of significant infrastructure investments and services supported.</p> <p>b. Current or expected impacts on communities and local economies, including positive and negative impacts where relevant.</p> <p>c. Whether these investments and services are commercial, in-kind, or pro bono engagements.</p>	Contributing to Society
203-2	<p>a. Examples of significant identified indirect economic impacts of the organization, including positive and negative impacts.</p> <p>b. Significance of the indirect economic impacts in the context of external benchmarks and stakeholder priorities, such as national and international standards, protocols, and policy agendas.</p>	-

GRI Standards	Requirements	Page Number/URL
GRI 204: Procurement Practices		
204-1	a. Percentage of the procurement budget used for significant locations of operation that is spent on suppliers local to that operation (such as percentage of products and services purchased locally). b. The organization's geographical definition of 'local'. c. The definition used for 'significant locations of operation'.	-
GRI 205: Anti-corruption		
205-1	a. Total number and percentage of operations assessed for risks related to corruption. b. Significant risks related to corruption identified through the risk assessment.	Putting Compliance into Practice
205-2	a. Total number and percentage of governance body members that the organization's anti-corruption policies and procedures have been communicated to, broken down by region. b. Total number and percentage of employees that the organization's anti-corruption policies and procedures have been communicated to, broken down by employee category and region. c. Total number and percentage of business partners that the organization's anti-corruption policies and procedures have been communicated to, broken down by type of business partner and region. Describe if the organization's anti-corruption policies and procedures have been communicated to any other persons or organizations. d. Total number and percentage of governance body members that have received training on anti-corruption, broken down by region. e. Total number and percentage of employees that have received training on anti-corruption, broken down by employee category and region.	Putting Compliance into Practice
205-3	a. Total number and nature of confirmed incidents of corruption. b. Total number of confirmed incidents in which employees were dismissed or disciplined for corruption. c. Total number of confirmed incidents when contracts with business partners were terminated or not renewed due to violations related to corruption. d. Public legal cases regarding corruption brought against the organization or its employees during the reporting period and the outcomes of such cases.	-
GRI 206: Anti-competitive Behavior		
206-1	a. Number of legal actions pending or completed during the reporting period regarding anti-competitive behavior and violations of anti-trust and monopoly legislation in which the organization has been identified as a participant. b. Main outcomes of completed legal actions, including any decisions or judgments.	-

Environmental

GRI Standards	Requirements	Page Number/URL
GRI 301: Materials		
103-1	a. An explanation of why the topic is material. b. The Boundary for the material topic, which includes a description of: i. where the impacts occur; ii. the organization's involvement with the impacts. For example, whether the organization has caused or contributed to the impacts, or is directly linked to the impacts through its business relationships. c. Any specific limitation regarding the topic Boundary.	Eco Vision 2050 Environmental Targets and Results Green Products :Konica Minolta's Approach Green Factories :Konica Minolta's Approach

GRI Standards	Requirements	Page Number/URL
103-2	a. An explanation of how the organization manages the topic. b. A statement of the purpose of the management approach. c. A description of the following, if the management approach includes that component: i. Policies ii. Commitments iii. Goals and targets iv. Responsibilities v. Resources vi. Grievance mechanisms vii. Specific actions, such as processes, projects, programs and initiatives	Konica Minolta Environmental Policy Eco Vision 2050 Management System Environmental Targets and Results Green Products :Konica Minolta's Approach Green Factories :Konica Minolta's Approach Sustainable Green Products Certification System Excellent Green Factory Certification System Resource Conservation and Recycling of Products Resource Conservation and Recycling in Production Operations
103-3	a. An explanation of how the organization evaluates the management approach, including: i. the mechanisms for evaluating the effectiveness of the management approach; ii. the results of the evaluation of the management approach; iii. any related adjustments to the management approach.	Environmental Targets and Results Management System Sustainable Green Products Certification System Excellent Green Factory Certification System
301-1	a. Total weight or volume of materials that are used to produce and package the organization's primary products and services during the reporting period, by: i. non-renewable materials used; ii. renewable materials used.	Resources-Environmental Data Eco Leaf Environmental Label
301-2	a. Percentage of recycled input materials used to manufacture the organization's primary products and services.	Eco Leaf Environmental Label
301-3	a. Percentage of reclaimed products and their packaging materials for each product category. b. How the data for this disclosure have been collected.	Product Recycling Reduction of Use of Packaging Materials
GRI 302: Energy		
103-1	a. An explanation of why the topic is material. b. The Boundary for the material topic, which includes a description of: i. where the impacts occur; ii. the organization's involvement with the impacts. For example, whether the organization has caused or contributed to the impacts, or is directly linked to the impacts through its business relationships. c. 302-3	<p>a. Energy intensity ratio for the organization.</p> <p>b. Organization-specific metric (the denominator) chosen to calculate the ratio.</p> <p>c. Types of energy included in the intensity ratio; whether fuel, electricity, heating, cooling, steam, or all.</p> <p>d. Whether the ratio uses energy consumption within the organization, outside of it, or both.</p>	<p>Energy / CO₂- Environmental Data</p>
302-4	<p>a. Amount of reductions in energy consumption achieved as a direct result of conservation and efficiency initiatives, in joules or multiples.</p> <p>b. Types of energy included in the reductions; whether fuel, electricity, heating, cooling, steam, or all.</p> <p>c. Basis for calculating reductions in energy consumption, such as base year or baseline, including the rationale for choosing it.</p> <p>d. Standards, methodologies, assumptions, and/or calculation tools used.</p>	<p>Environmental Accounting</p>

GRI Standards	Requirements	Page Number/URL
302-5	a. Reductions in energy requirements of sold products and services achieved during the reporting period, in joules or multiples. b. Basis for calculating reductions in energy consumption, such as base year or baseline, including the rationale for choosing it. c. Standards, methodologies, assumptions, and/or calculation tools used.	Environmental Accounting
GRI 303: Water and Effluents		
303-1	a. A description of how the organization interacts with water, including how and where water is withdrawn, consumed, and discharged, and the water-related impacts caused or contributed to, or directly linked to the organization's activities, products or services by a business relationship (e.g., impacts caused by runoff). b. A description of the approach used to identify water-related impacts, including the scope of assessments, their timeframe, and any tools or methodologies used. c. A description of how water-related impacts are addressed, including how the organization works with stakeholders to steward water as a shared resource, and how it engages with suppliers or customers with significant water-related impacts. d. An explanation of the process for setting any water-related goals and targets that are part of the organization's management approach, and how they relate to public policy and the local context of each area with water stress.	Addressing Biodiversity in Production Activities
303-2	a. A description of any minimum standards set for the quality of effluent discharge, and how these minimum standards were determined, including: <ol style="list-style-type: none"> i. how standards for facilities operating in locations with no local discharge requirements were determined; ii. any internally developed water quality standards or guidelines; iii. any sector-specific standards considered; iv. whether the profile of the receiving waterbody was considered. 	Addressing Biodiversity in Production Activities
303-3	a. Total water withdrawal from all areas in megaliters, and a breakdown of this total by the following sources, if applicable: <ol style="list-style-type: none"> i. Surface water; ii. Groundwater; iii. Seawater; iv. Produced water; v. Third-party water. b. Total water withdrawal from all areas with water stress in megaliters, and a breakdown of this total by the following sources, if applicable: <ol style="list-style-type: none"> i. Surface water; ii. Groundwater; iii. Seawater; iv. Produced water; v. Third-party water, and a breakdown of this total by the withdrawal sources listed in i-iv. c. A breakdown of total water withdrawal from each of the sources listed in Disclosures 303-3-a and 303-3-b in megaliters by the following categories: <ol style="list-style-type: none"> i. Freshwater ($\leq 1,000$ mg/L Total Dissolved Solids); ii. Other water ($> 1,000$ mg/L Total Dissolved Solids). d. Any contextual information necessary to understand how the data have been compiled, such as any standards, methodologies, and assumptions used.	Water- Environmental Data Standards for Calculating Environmental Data

GRI Standards	Requirements	Page Number/URL
303-4	<p>a. Total water discharge to all areas in megaliters, and a breakdown of this total by the following types of destination, if applicable:</p> <ul style="list-style-type: none"> i. Surface water; ii. Groundwater; iii. Seawater; iv. Third-party water, and the volume of this total sent for use to other organizations, if applicable. <p>b. A breakdown of total water discharge to all areas in megaliters by the following categories:</p> <ul style="list-style-type: none"> i. Freshwater ($\leq 1,000$ mg/L Total Dissolved Solids); ii. Other water ($> 1,000$ mg/L Total Dissolved Solids). <p>c. Total water discharge to all areas with water stress in megaliters, and a breakdown of this total by the following categories:</p> <ul style="list-style-type: none"> i. Freshwater ($\leq 1,000$ mg/L Total Dissolved Solids); ii. Other water ($> 1,000$ mg/L Total Dissolved Solids). <p>d. Priority substances of concern for which discharges are treated, including:</p> <ul style="list-style-type: none"> i. how priority substances of concern were defined, and any international standard, authoritative list, or criteria used; ii. the approach for setting discharge limits for priority substances of concern; iii. number of incidents of non-compliance with discharge limits. <p>e. Any contextual information necessary to understand how the data have been compiled, such as any standards, methodologies, and assumptions used.</p>	Water- Environmental Data
303-5	<p>a. Total water consumption from all areas in megaliters.</p> <p>b. Total water consumption from all areas with water stress in megaliters.</p> <p>c. Change in water storage in megaliters, if water storage has been identified as having a significant water-related impact.</p> <p>d. Any contextual information necessary to understand how the data have been compiled, such as any standards, methodologies, and assumptions used, including whether the information is calculated, estimated, modeled, or sourced from direct measurements, and the approach taken for this, such as the use of any sector-specific factors.</p>	-
GRI 304: Biodiversity		
304-1	<p>a. For each operational site owned, leased, managed in, or adjacent to, protected areas and areas of high biodiversity value outside protected areas, the following information:</p> <ul style="list-style-type: none"> i. Geographic location; ii. Subsurface and underground land that may be owned, leased, or managed by the organization; iii. Position in relation to the protected area (in the area, adjacent to, or containing portions of the protected area) or the high biodiversity value area outside protected areas; iv. Type of operation (office, manufacturing or production, or extractive); v. Size of operational site in km² (or another unit, if appropriate); vi. Biodiversity value characterized by the attribute of the protected area or area of high biodiversity value outside the protected area (terrestrial, freshwater, or maritime ecosystem); vii. Biodiversity value characterized by listing of protected status (such as IUCN Protected Area Management Categories, Ramsar Convention, national legislation). 	-

GRI Standards	Requirements	Page Number/URL
304-2	<p>a. Nature of significant direct and indirect impacts on biodiversity with reference to one or more of the following:</p> <ul style="list-style-type: none"> i. Construction or use of manufacturing plants, mines, and transport infrastructure; ii. Pollution (introduction of substances that do not naturally occur in the habitat from point and non-point sources); iii. Introduction of invasive species, pests, and pathogens; iv. Reduction of species; v. Habitat conversion; vi. Changes in ecological processes outside the natural range of variation (such as salinity or changes in groundwater level). <p>b. Significant direct and indirect positive and negative impacts with reference to the following:</p> <ul style="list-style-type: none"> i. Species affected; ii. Extent of areas impacted; iii. Duration of impacts; iv. Reversibility or irreversibility of the impacts. 	-
304-3	<p>a. Size and location of all habitat areas protected or restored, and whether the success of the restoration measure was or is approved by independent external professionals.</p> <p>b. Whether partnerships exist with third parties to protect or restore habitat areas distinct from where the organization has overseen and implemented restoration or protection measures.</p> <p>c. Status of each area based on its condition at the close of the reporting period.</p> <p>d. Standards, methodologies, and assumptions used.</p>	-
304-4	<p>a. Total number of IUCN Red List species and national conservation list species with habitats in areas affected by the operations of the organization, by level of extinction risk:</p> <ul style="list-style-type: none"> i. Critically endangered ii. Endangered iii. Vulnerable iv. Near threatened v. Least concern 	Two endangered species have been found at our group sites, the Golden Orchid (<i>Cephalanthera falcata</i>) and the Japanese Lily (<i>Lilium speciosum</i>), both at Tokyo Site Hino. Both species are classified as Vulnerable (VU) on the 4th Version of the Japanese Red Lists maintained by Japan's Ministry of the Environment.
GRI 305: Emissions		
103-1	<p>a. An explanation of why the topic is material.</p> <p>b. The Boundary for the material topic, which includes a description of:</p> <ul style="list-style-type: none"> i. where the impacts occur; ii. the organization's involvement with the impacts. For example, whether the organization has caused or contributed to the impacts, or is directly linked to the impacts through its business relationships. <p>c. Any specific limitation regarding the topic Boundary.</p>	Eco Vision 2050 Environmental Targets and Results

Stakeholder Engagement

Basic Concept

Konica Minolta believes that dialogue with diverse stakeholders including customers, employees, the local and global communities, business partners, shareholders and investors is essential to create both social and business value. Therefore, each division in charge engages in daily dialogue, and the company also proactively creates opportunities for communication, including at the executive level, while disclosing information using various communication tools to help people understand Konica Minolta's approach.

The opinions acquired from conversations with stakeholders are reviewed and urgent concerns are reported to management, facilitating improvements in management, products and services.

Stakeholder Engagement Activities

Stakeholders	Tools and Opportunities for Communication	Main Issues	Incorporation of Feedback into Management, Products and Services
<p>Customers</p> <p>Konica Minolta does business around the world. › Communication with Shareholders and Investors

External Assurance

Konica Minolta engaged KPMG AZSA Sustainability Co., Ltd. to provide assurance on whether its data on CO₂ emissions from procurement, research & development, production, product distribution, sales and service, and product usage; energy use; waste discharged externally from manufacturing; atmospheric emissions of volatile organic compounds (VOCs); water consumption; the number of regular employees (by gender); and the percentage of employees with disabilities have been measured, gathered, and disclosed in accordance with the criteria set by the Group. Indicators that have been assured by KPMG AZSA Sustainability Co., Ltd. are marked with ★.

Independent Assurance Report

To the President and CEO of Konica Minolta, Inc.

We were engaged by Konica Minolta, Inc. (the “Company”) to undertake a limited assurance engagement of the environmental and social performance indicators marked with ★ for the period from April 1, 2019 to March 31, 2020 (except for the ‘Percentage of Employees with Disabilities’, which is as of June 1, 2020) included in its Sustainability Report 2020 (Website information as of December 2020) (the “Report”).

The Company’s Responsibility

The Company is responsible for the preparation of the Indicators in accordance with its own reporting criteria (the “Company’s reporting criteria”), as described in the Report.

Our Responsibility

Our responsibility is to express a limited assurance conclusion on the Indicators based on the procedures we have performed. We conducted our engagement in accordance with the ‘International Standard on Assurance Engagements (ISAE) 3000, Assurance Engagements other than Audits or Reviews of Historical Financial Information’ and the ‘ISAE 3410, Assurance Engagements on Greenhouse Gas Statements’ issued by the International Auditing and Assurance Standards Board. The limited assurance engagement consisted of making inquiries, primarily of persons responsible for the preparation of information presented in the Report, and applying analytical and other procedures, and the procedures performed vary in nature from, and are less in extent than for, a reasonable assurance engagement. The level of assurance provided is thus not as high as that provided by a reasonable assurance engagement. Our assurance procedures included:

- Interviewing the Company’s responsible personnel to obtain an understanding of its policy for preparing the Report and reviewing the Company’s reporting criteria.
- Inquiring about the design of the systems and methods used to collect and process the Indicators.
- Performing analytical procedures on the Indicators.
- Examining, on a test basis, evidence supporting the generation, aggregation and reporting of the Indicators in conformity with the Company’s reporting criteria, and recalculating the Indicators.
- Visiting one of the Company’s domestic facilities selected on the basis of a risk analysis.
- Evaluating the overall presentation of the Indicators.

Conclusion

Based on the procedures performed, as described above, nothing has come to our attention that causes us to believe that the Indicators in the Report are not prepared, in all material respects, in accordance with the Company’s reporting criteria as described in the Report.

Our Independence and Quality Control

We have complied with the Code of Ethics for Professional Accountants issued by the International Ethics Standards Board for Accountants, which includes independence and other requirements founded on fundamental principles of integrity, objectivity, professional competence and due care, confidentiality and professional behavior. In accordance with International Standard on Quality Control 1, we maintain a comprehensive system of quality control including documented policies and procedures regarding compliance with ethical requirements, professional standards and applicable legal and regulatory requirements.

KPMG AZSA Sustainability Co., Ltd.

KPMG AZSA Sustainability Co., Ltd.

January 28, 2021

Comment from the Assurance Provider

Shutaro Takakura, KPMG AZSA Sustainability Co., Ltd.

Konica Minolta has announced its new commitment to achieve "Carbon Minus" status by 2030, well ahead of its previous 2050 target, on this year's sustainability website. In fiscal 2019, the company reports a 50% reduction in CO₂ emissions throughout its entire lifecycle compared to fiscal 2005 levels, by purchasing renewable electricity at some of its manufacturing/sales facilities, and by placing power-saving multi-function printers on the market. It is becoming increasingly important to reduce greenhouse gas emissions not only from one's own operations but also across the entire value chain. In response to this, the company has expanded the scope of its Medium-Term Sustainability Strategy 2022 and set a target to reduce an amount equivalent to two-thirds of the company's entire CO₂ emissions, including those of its value chain, externally through cooperation with customers, suppliers and society. In the future, we expect the company to engage in emission reduction activities with an even wider range of stakeholders.

Regarding human resource data, the company has disclosed information with an emphasis on gender diversity and work-life balance. We believe it will become equally important to disclose information on global human resource utilization in the future. In addition to an increase in demand in the office business field due to the progress of the digital revolution, demand is expected to increase worldwide in the healthcare business field due to the improved quality and access of healthcare services. We look forward to seeing the company expand its reporting to include strategies for how to utilize global human resources in response to the increase in demand for these products, as well as targets and achievements based on those strategies.

Sustainability Reporting Policy

The Konica Minolta Sustainability Website (hereinafter, the "site") reports on specific initiatives to address material issues that Konica Minolta (hereinafter, the "company") is pursuing. The company also issues an annual Integrated Report that summarizes information of interest to investors and shareholders, as well as financial and non-financial information that is of great importance to Konica Minolta. The purpose of the site, however, is to provide even more detailed sustainability information. In recent years, with the growing investor interest in non-financial corporate information, the company decided to disclose all of its sustainability information promptly and comprehensively on this website. It stopped publishing both its CSR Report and Environmental Report in 2020.

The online content is prepared based on various global guidelines and the information needs of stakeholders.

A PDF version of the Sustainability Website is posted on the Site about two months after the content is initially posted.

Report Boundary

Information on the site covers Konica Minolta, Inc. and its consolidated subsidiaries. When data is given on a specific subset of companies, the boundary is separately indicated.

Note: At this site, "Konica Minolta" refers to the Konica Minolta Group.

Reporting Period

In principle, the site covers activities undertaken from April 1, 2019 to March 31, 2020. Some sections may include information on earlier initiatives or more recent activities. At the site, "fiscal 2019" refers to the fiscal year that started April 1, 2019 and ended March 31, 2020.

Publication Date

December 2020 (Next report: scheduled for August 2021; previous report: August 2019)

Adherence to Global Guidelines

- Global Reporting Initiative (GRI) Standards
The reporting on this site complies with the Core option of the GRI Standards.
- Sustainability Accounting Standards Board (SASB)
- United Nations Global Compact
- ISO 26000
- Environmental Reporting Guidelines 2018

For a comparison of the GRI Standards, SASB, United Nations Global Compact, and ISO26000, please see the [Guideline Comparison Chart](#).

External Assurance

External Assurance has been performed by KPMG AZSA Sustainability Co., Ltd. for some of the company's environmental and social initiative data for fiscal 2019 (April 1, 2019 to March 31, 2020; except for the 'Percentage of Employees with Disabilities', which is as of June 1, 2020). Please refer to [the external assurance statement](#) for more information.
