

# ***White Paper***

## ***Circular economy***

For the years to come, we want to work with a common theme for all countries. The goal is to federate countries with each other, to work together on a subject that can be used by all.

FCEM will coordinate this work and bring together the proposals, the needs of the members.

The aim is to synthesize, transmit and disseminate the ideas of member nations, to carry out proposals and suggestions either with government partners or institutions or by ourselves.

### **Working method**

- 1. State of the art**
- 2. Best practices**
- 3. Proposals**

We must demonstrate our creativity by being a force of proposals.

FCEM must be a useful tool for all. We must use it to demonstrate our unity and our strength.

The different countries use our motto in their communication

“Only we are invisible, together we are invincible. ”

Let us make this motto a reality in joint and united and efficient work.

This work will allow us to make all the members better aware of the workings of FCEM, to create synergies between us in all friendship, taking into account the diversity of our association.

We will enrich ourselves with our differences, in our customs, our national realities.

A better understanding of each other's expectations will be analyzed.

Mutual aid, the ideas put together will make it easier for us to know each other and make it easier to trade and even business between us.

## 1 STATE OF ART

It is a synthetic and organized panorama of work already carried out on the subject. Realizing an art state involves precise work and an analysis of existing situations related to the chosen theme.

Each country will first be able to work at regional level by chapter according to its organization and then carry out a national synthesis. The country's legislation and the realities on the ground will be exposed.

## 2 THE GOOD PRACTICES

In this sector it is a set of behaviors that are consensually considered essential by most professionals in the field, for reasons of quality, hygiene and safety, compliance with legislation or ethics.

It is the practical standards or ethical guidelines that provide the best plans.

Best practices serve as a roadmap for our businesses on how to deal with the subject and provide the best way to deal with the problems and problems that arise. Here too the realities of the country, cultural can be developed.

Best practices can also be used as a reference.

## 3 PROPOSALS

We will let you explain your recommendations for your country. Taking into account the state of the art and good practices, you will make us a series of proposals to implement or develop the circular economy in your country.

**A first point will be made during the Committee of Presidents which will take place, if the sanitary conditions allow it in May in Mauritius.**

**The goal is to hand over all the elements to produce this FCEM White Paper during the World Congress in Marrakech from November 9 to 11, 2022.**
