

Approach to "Environment"

TOTO products are used in the daily lives of our customers over a long period of time. Accordingly, taking into account the perspective of the product life cycle (from raw material procurement and manufacturing to sale, distribution, use, and eventually disposal), reducing water and energy use in the stage of product use helps contribute significantly to conserving the global environment. For that reason, in addition to introducing energy-saving technologies and renewable energy sources at our manufacturing plants, we are striving to realize environmental conscious designs within our product development and popularize products that are based on these designs.

"Environment" is another of the three global themes of the vision. For this theme, we have established the goals of "protect our limited water resources and connect with the future," "undertake initiatives to fight global warming and coexist with the earth," and "aim for sustainable development together with local communities," and are engaging in various efforts to realize these goals. Based on these goals, we are working to "popularize water-saving products," "reduce CO2 emissions," and "engage in social contribution activities deeply rooted in local communities."

By protecting the environment through our business activities,
we will contribute to the SDGs.

Conserving water

Protect our limited water resources and connect with the future

Preventing global warming

Undertake initiatives to fight global warming and coexist with the earth

Contribution to local communities

Aim for sustainable development together with local communities

Conserving natural resources

Keeping the Earth clean

Conservation of biodiversity

TOTO Water Environment Fund

Life Cycle Assessment

Environmental Management

Scope of reporting:

- TOTO LTD. and all 48 of consolidated subsidiary companies in Japan and overseas
- Period covered by this report : Fiscal year 2021 (Japan:April 1, 2021 to March 31, 2022 / Overseas: January 1, 2021 to December 31, 2021. Includes some information pertaining to before or after the period)

- Description of greenhouse gas (GHG) emissions and CO2 emission/reduction They are defined in this report as follows:

CO2 emissions and reduction: CO2 from the energy consumption of fuel and electricity

Greenhouse gas (GHG) emissions: Emissions produced from raw materials in addition to the CO2 from the energy consumption of fuel and electricity. This includes greenhouse gases derived from non-energy consumption that are converted to CO2
