THREATS

artificial night light (ALAN)

the emission of radio wavelengths

the contrails of satellites in Earth orbit.

low (LEO).

Sky Quality and Access to Starlight

What can we do?

- **Perception of the sky as a resource to be safeguarded not only for science, but also as a cultural, environmental, biodiversity, health and quality-of-life heritage and as an engine of sustainable economy through star tourism**
- **Opportunity for development and empowerment for many women in rural settings that tend to be dramatically depopulated.**
- **Promote technological innovation to have intelligent lighting, without wasting energy**

SUPPORT

FORM FOR SUPPORTING THE SKY QUALITY AND THE ACCESS TO THE STARLIGHT SDG18

The starry sky is a resource to be safeguarded not only for science, but also as a cultural, environmental and biodiversity heritage, for health and quality of life, and as a driver of sustainable economy through star tourism. The sky must be a legacy for future generations.

With this form I support the initiative of BPW Spain and the Starlight Foundation to create a new Sustainable Development Goal for the Quality of the Sky and the access to Starlight SDG18 (Sustainable Development Goal 18).

Sky Quality and Access to Starlight
