

UNITED NATIONS GLOBAL COMPACT COMMUNICATION ON ENGAGEMENT (COE) 2021 - 2022

Statement of Continued Support

As a non-profit organization with the purpose of working on the Global Goals, we are strongly committed to supporting the UN Global Compact and its ten principles for responsible business conduct. We believe that the implementation of these principles is essential for achieving sustainable development and creating a fairer and stronger global society.

Our organization recognizes the urgent need to align our work with the UN Sustainable Development Goals (SDGs), which serve as a roadmap for global development. We are committed to contributing to the achievement of the SDGs by promoting responsible and sustainable business practices, fostering social and environmental responsibility, and building partnerships that advance these goals.

We understand the challenges facing our global society are complex and interconnected, and that we need collective action to address them. By promoting responsible business conduct and sustainable development, we can help to create a more just and equitable world. We will continue to work towards this goal and collaborate with other organizations and stakeholders to achieve the SDGs and build a better future for all.

In this Communication of Engagement, we describe the actions that our organization has taken to support the UN Global Compact and its Principles as suggested for an organization like ours. We also commit to sharing this information with our stakeholders using our primary channels of communication.

Activities and Key Figures

Below we present a selection of our most relevant activities in the period 2021 to 2022.

Communication & Dissemination - Global Society Platform

Our organization has made significant strides in promoting sustainability through the implementation of our media system. The system was designed with a clear purpose: to educate diverse audiences about the UN Global Compact Ten Principles and the importance of sustainable development.

Our primary goal is to create awareness about the global society of sustainable development and to show people that they are not alone in their efforts to shape the environment in a sustainable way. We believe that connecting people with similar goals is crucial in achieving our vision for a sustainable future. Our system has been successful in attracting investors, companies, and entrepreneurs to engage with us and explore innovative solutions for progress.

We are also committed to encouraging those who fight for non-consensual SDGs, such as gender equality, education, and peace. By highlighting the positive impact of cooperation, we aim to inspire others to join us in creating a sustainable world.

Our outreach efforts have been fruitful, reaching 1000-3000 people per week, with an increasing trend. We are proud to have secured a partnership with Google, who supports our efforts in spreading the word. With over 200 projects reported so far, we continue to attract new contributors and partners daily.

The project is financed through donations, and we are grateful for the support of our generous donors. Through our media system, we have facilitated numerous connections and collaborations between like-minded individuals, resulting in a strong community of sustainability advocates.

Looking to the future, we are preparing new formats and channels, including stronger journalistic content, and increased social media activities, to expand our reach and impact.

Alliance Building - Global Society Network

Our organization has enlarged its network connecting people and institutions of academics, activists, entrepreneurs, and other change-makers from around the world with the aim of promoting a global society as an inclusive, internet-based civil society of diverse cultures that sees itself as responsible for sustainable global development.

We believe in the power of competence transfer and recognize the value that senior experts can bring to society. To facilitate this, we connected over 100 seasoned professionals with more than 20 projects that have leveraged their expertise, without requiring them to leave their existing work environments, bridging the gap between senior experts and projects in need of their skills.

Moreover, the organization convened over 40 gatherings where members shared their latest research, discussed new ideas, and worked collaboratively to develop innovative strategies for promoting a more inclusive and cohesive global society. These gatherings provided a fertile ground for new connections, fresh insights, and valuable collaborations.

Sustainable Transformation - Bio Intelligence Competence Center

In 2021, the Bio Intelligence Competence Centre was fully established together with partners from academic and business with the vision to lead the way in sustainable transformation through interdisciplinary collaboration among high-ranking scientists and industry experts. The centre brings together experts from various fields including mechanical engineering, process engineering, biology, biotechnology, medical technology, architecture, nutritional sciences and computer science. By combining these diverse fields of expertise, the centre has been able to develop innovative system architectures that prioritize sustainable production and lifestyles.

The centre's approach is not just theoretical but practical, with over 20 ongoing projects that aim to translate research into real-world solutions. In addition, the centre has published more than 30 articles in leading scientific journals, further showcasing its dedication to advancing knowledge and contributing to scientific progress.

The Bio Intelligence Competence Centre's collaborative efforts have attracted more than 20 institutional members, who recognize the value of interdisciplinary collaboration in shaping the future of sustainable transformation. By bringing together leading experts from various disciplines, the centre is well-positioned to continue leading the way towards development and transformation.

Forecast - Global Society Institute

Since the end of 2022, the Global Society Institute has been under construction. This academic institution aims to promote a global society as a comprehensive, internet-based civil society of diverse cultures that take responsibility for sustainable global development. The institute initiates projects that serve to achieve the United Nations Global Goals, has SDGs education programs, connects people and organizations that shape the global society and conducts research in the fields of bio intelligence, artificial intelligence, and global intelligence.

The Global Society Institute is founded by initiators from the fields of science, education, business, and culture who are committed to shaping a sustainable society. Its sponsoring organizations include the Organization for Science, Education, and Global Society and the Protective Association German Forest.

The institute is proud to announce its upcoming membership in the Principles for Responsible Management Education (PRME) initiative, which reflects its commitment to promoting sustainable development through education, research, and thought leadership. As the Global Society Institute continues to develop, it remains dedicated to its mission of fostering a global society that is inclusive, sustainable, and values-driven. By leveraging

the expertise of its diverse network of partners and stakeholders, the institute is well-positioned to drive positive change and shape the future of global society.

Final Remarks

In addition to the main topics presented above, the members and volunteers of our organisation and network are constantly working on many other projects, large and small ones, not detailed here, e.g. extensive research into new substances that are healthier for humans and our planet or educational and cultural events.

In the past years, our focus was primarily on constructing essential organizational and technical infrastructure. In the near future, our focus will be on individuals who are facing significant challenges and risks in areas of society where success carries high stakes, such as issues related to inequalities, gender injustice and aggression against the civil society. We believe that most challenges can be overcome through innovation and collaboration but in some fields, people need additional support from all of us.

The world is changing, and we are motivated to be part of shaping the global society of tomorrow.

Yours sincerely,

Dr. Christoph A. Geisler
Director
