Part I. Statement of Continued Support by the Chief Executive

9th September, 2023

To our stakeholders:

I am pleased to confirm that NET Africa reaffirms its support to the United Nations Global Compact and its Ten Principles in the areas of Human Rights, Labour, Environment and Anti-Corruption. This is our Communication on Engagement with the United Nations Global Compact. We welcome feedback on its contents.

In this Communication of Engagement, we describe the actions that our organization has taken to support the UN Global Compact and its Principles as suggested for an organization like ours. We also commit to sharing this information with our stakeholders using our primary channels of communication.

Yours Sincerely,

Fadeke Ayoola

CEO NET Africa

Part II. Description of Actions

Enterprise Risk Management

Enterprise risk management (ERM) is a holistic approach to managing risks that can impact an organization's objectives. ERM is an ongoing process that involves identifying, assessing, and mitigating risks.

Using ERM we help organizations to:

- Identify and assess risks:
- Mitigate risks:
- Improve decision-making:
- Increased transparency:
- Improved compliance:

There are a number of different frameworks that we use to help organisations

- The COSO ERM framework
- The ISO 31000 framework
- The NIST Cybersecurity Framework

Sustainability Reporting

We work with companies on sustainability reporting which is the process of disclosing non-financial information about an organization's environmental, social, and governance (ESG) performance. This information is typically disclosed in a sustainability report, which is a document that provides a comprehensive overview of an organization's ESG performance.

Natural Resource Management

Natural resource management (NRM) is the management of natural resources such as land, water, soil, plants and animals, with a particular focus on how management affects the quality of life for both present and future generations (stewardship).

We assist companies with the following:

- Identifying and assessing natural resources.
- Developing and implementing management plans
- Monitoring and evaluating resource management.
- Communicating with stakeholders.

Natural Resource Solutions

We work with a number of different natural resource solutions:

- Sustainable agriculture: This approach to agriculture aims to produce food and other agricultural products in a way that does not deplete the soil or pollute the environment.
- Reforestation: This approach aims to replant trees that have been cut down or destroyed.
- Water conservation: can help to ensure that there is enough water for everyone, and it can also help to protect the environment.
- Renewable energy: This approach uses energy sources that are not depleted, such as solar power, wind power, and hydroelectric power.

Part III. Measurement of Outcomes

We have a number of partnerships formalized with mutual aims to advance the UN Global Compact principles in the form of working groups.

- (1) Climate Finance working group
- (2) Natural Resource Management
- (3) Africa Small Island Working Group
- (4) SME Working Group
