## A CROSS-SECTIONAL SURVEY OF KNOWLEDGE, ATTITUDE, AND PRACTICES TOWARD DENGUE FEVER AMONG NURSING STUDENTS AND HEALTH WORKERS.

### Introduction:

Dengue fever (DF) has become a disease of public health concern. It is a mosquito-borne virus infection caused by one of the four serotypes of the dengue virus, and the disease is prevalent in the tropical and subtropical regions of the world. Yearly, about 390 million cases of new infection are estimated to occur.

### Aims of the Study:

This study was aimed at determining the knowledge, attitude and practices regarding dengue fever amongst nursing students and health workers in Mahima college of Nursing, Ballari

Methods: Systematic sampling method.

SDG 3: Good health and well being

Mahima College Of Nursing, Ballari, Karnataka

▪

A cross-sectional survey of knowledge, attitude, and practices toward dengue fever among nursing students and health workers.
