## COMMUNICATION ON ENGAGEMENT 2024

I am writing to convey our continued commitment to the principles of the UN Global Compact and to outline our ongoing efforts in advancing sustainable development, particularly in the realms of climate change mitigation, renewable energy adoption, prosumer empowerment, and circular economy promotion.

At Environment Improvement Centre we firmly believe in the urgent need to address climate change and its multifaceted impacts. As such, we have actively aligned our initiatives with the objectives outlined by the UN Global Compact, leveraging our expertise and partnerships to drive positive change in our communities.

Our Communication of Engagement highlights the following key areas of focus:

- Climate Change Mitigation:** We recognize the critical importance of reducing greenhouse gas emissions and enhancing resilience to climate impacts. Through research, advocacy, and collaborative projects, we are working to develop and implement innovative solutions to mitigate climate change at the local, regional, and global levels.
- Renewable Energy Advocacy:** Transitioning to renewable energy sources is essential for achieving a low-carbon future. We are dedicated to promoting the adoption of renewable energy technologies, advocating for supportive policies, and empowering communities to harness clean energy solutions for sustainable development.
- Prosumer Empowerment:** The concept of prosumers—consumers who also produce energy—is gaining traction as a means to decentralize energy systems and increase resilience. We are committed to empowering individuals and communities to become prosumers through education, capacity building, and facilitating access to renewable energy technologies.
- Circular Economy Promotion:** Shifting towards a circular economy model is imperative for minimizing waste, conserving resources, and promoting sustainable consumption and production patterns. We are actively engaged in promoting circular economy principles through research, awareness campaigns, and collaborative initiatives aimed at fostering innovation and driving systemic change.

**The overarching goal** of our programs is to foster transformative change towards sustainable development, guided by the principles of climate change mitigation, renewable energy advocacy, prosumer empowerment, and circular economy promotion. In line with the objectives of the UN Global Compact, we aim to facilitate a shift towards a future where communities are resilient, innovation thrives, and collective action drives sustainable progress, thereby contributing to a more equitable and environmentally conscious world.

**The target groups** we engage with include local communities, businesses and industries, policy makers and government agencies, educational institutions, non-governmental organizations (NGOs) and civil society, and youth. Engaging these groups through various initiatives is essential for driving transformative change towards sustainable development, focusing on climate change mitigation, renewable energy adoption, prosumer empowerment, and circular economy promotion.

We look forward to continuing our collaboration with fellow Compact members, stakeholders, and partners to catalyse positive impact and create a more sustainable and resilient future for all.

**We will also stay strongly committed to the UN Global Compact Principles in the future.**

Yours sincerely,

Environment Improvement Centre  
Executive Director  
Ms Ivana Jovčić
